This book presents
a review of various
issues related to
Lorentz symmetry

breaking.
Explicitly, we consider (i) motivations for introducing Lorentz symmetry breaking, (ii) classical aspects of Lorentz-breaking field theory models including typical forms of Lorentz-breaking additive terms, wave propagation in Lorentz-breaking theories, and mechanisms for

breaking the Lorentz symmetry; (iii) quantum corrections in Lorentz-breaking theories, especially the possibilities for perturbation generating the most interesting Lorentz-breaking terms; (iv) correspondence between non-commutative field theories and Lorentz symmetry breaking; (v) supersymmetric Lorentz-breaking theories; and (vi) Lorentz symmetry breaking in a curved space-time. We close the book with the review of experimental studies of Lorentz symmetry breaking. The importance and relevance of these topics are explained, first, by studies of limits of applicability of the Lorentz

symmetry, second, by that various searches of the possible extensions of the standard model, including the Lorentz-breaking ones, and need to study their properties, third, by the relation between Lorentz symmetry breaking with string theory, fourth, by the problem of formulating a consistent quantum gravity theory, so

modified gravity models are to be examined.

The 7th International Workshop in Analysis and its Applications (IWAA) was held at the University of Maine, June 1-6, 1997 and featured approximately 60 mathematicians. The principal theme of the workshop shares the title of this volume and the latter is a direct outgrowth of the

workshop. IWAA was founded in 1984 by Professor Caslav V. Stanojevic. The first meeting was held in the resort complex Kupuri, Yugoslavia, June 1-10, 1986, with two pilot meetings preceding. The Organization Committee together with the Advisory Committee (R. P. Boas, R. R. Goldberg, J. P. Kahne) set forward the format and content of future meetings. A certain number of papers were presented that later appeared individually in such journals as the Proceedings of the AMS,

Bulletin of the AMS, Mathematis chen Annalen, and the Journal of Mathematical Analysis and its Applica tions. The second meeting took place June 1-10, 1987, at the same location. At the plenary session of this meeting it was decided that future meetings should have a principal theme. The theme for the third meeting (June 1- 10, 1989, Kupuri) was Karamata's Regular Variation. The principal theme for the fourth meeting (June 1-10, 1990, Kupuri)

was Inner Product and Convexity Structures in Analysis, Mathematical Physics, and Economics. The fifth meeting was to have had the theme, Analysis and Foundations, organized in cooperation with Professor A. Blass (June 1-10, 1991, Kupuri). Mathematical Thought From Ancient to Modern Times Link ö ping University Electronic Press The paper extends the work of Deaton (2021) by exploring the period

of post-crisis recovery in 2021-2024. The paper documents per-capita income divergence during the period of post-shock recovery, with countries at the bottom of the income distribution falling significantly behind. Findings suggest that higher COVID-19 vaccination rates and targeted virus containment measures are associated with faster recovery in per-capita incomes in the medium term. Evidence on the effectiveness of economic

support policies for reducing cross-country income inequality, including fiscal and monetary policies, is mixed especially in the case of developing countries.

This book addresses topical questions concerning the legal framework of trade in services, and assesses how these issues are dealt with in GATS and in selected preferential trade agreements. In addition, the chapters discuss whether the differences and similarities (if any) are evidence of greater coherence or greater divergence. The book combines the individual analyses to provide a more comprehensive picture of the current law on services trade

liberalisation. A quarter of a century after the conclusion of the General Agreement on Trade and Services (GATS), international law on trade in services is still in a state of flux: on the one hand, countries increasingly conclude bilateral and regional trade agreements with sections on trade in services that aim at a further liberalisation of services trade. On the other, the GATS structure remains the dominant model and serves as the basis for many preferential trade agreements.

In addition, new aspects such as electronic commerce, data protection and taxation are now emerging, while issues that had already manifested in the mid-1990s such as financial services regulation, labour mobility, and telecommunications continue to be problematic. Usually, the debates focus on the question of whether preferential trade agreements serve as a stepping-stone or stumbling block for trade liberalisation at the multilateral level. However, it can be assumed that rules

on trade in services in preferential trade agreements will coexist with the global GATS regime for the foreseeable future. This raises the question of whether we're currently witnessing a drive towards greater coherence or more divergence in agreements on trade in services.

Divergent thinking (DT) tests are the most frequently used types of creativity assessment and have been administered in traditional paper and pencil format for more than a half century. With the prevalence of computer-based testing and increasing demands for large-scale, faster, and more flexible testing procedures, it is necessary to explore and test the usability of computer-based divergent thinking tests. Yet few studies have focused on the use of technologies in the

assessment of creativity, including divergent thinking tests. The purpose of the present study was to design and test the feasibility of an online divergent thinking (DT) test. The following three aims were addressed: (1) evaluate reliability evidence of DT test scores, (2) explore relationships between technology use and online DT performance, and (3) compare the online test with its paper version regarding DT scores. One hundred and sixty-four participants were recruited

from the University of Connecticut and randomly assigned into three groups: online-basic (OB), online-advanced (OA), and paper-and-pencil (PP). Based on the results of reliability analysis, six DT scores were selected for analysis of variance and multiple regression modeling. The findings indicated that, despite of the possible link between technology use and online DT performance, no differences were found between different modes (online vs. paper) or different

interfaces (simple tools vs. advanced tools) in terms of either DT scores or reliability evidence. Additionally, males were found to produce overall significantly higher originality scores than females did in the line meaning test and the real-world problem test. The implications of these findings are further discussed in the paper.

in the subject English Language and Literature Studies - Literature, grade: 2,7, Ernst Moritz Arndt University of Greifswald (Anglophone Literaturwissenschaft), language: English, abstract: In the following, I will show and analyze the system of the factions in *The Divergent* by Verona Roth and its abuse ruled by the government as well as the system of the factions. I will consider how the factions interact. The relationships between and within the factions are important aspects, too. My term paper should prove that the social construct of society is abused by the government. Veronica Roth has written a trilogy of this dystopian novel.

They are called firstly *The Divergent* (2011), secondly *The Insurgent* (2012) and thirdly *The Allegiant* (2013). My primary source for this paper will be the first edition *The Divergent* so that I can get more into depth while analyzing. Involving all books would exceed the frame of the paper. Moreover, I will use public journals, newspaper, and secondary literature to underline the relevance of the topic for society in recent years. I will also use the novel *The Hunger Games* (2012) written by Suzanne Collins in some cases to find similarities and differences in dystopian, young adult fiction literature. The government abuses its power to control the majority of the

population in the fictional future city Chicago. Protagonist in the novel is Beatrice Prior who will take the main space for my citations and arguments in this paper. Her thoughts and actions represent the power and discipline that young adults can show, in this case in literature.

In these volumes, the most significant of the collected papers of the Chinese-American theoretical physicist Tsung-Dao Lee are printed. A complete list of his published papers, in order of publication, appears in the Bibliography of T.D. Lee. The papers have been arranged into ten categories, in most cases according to the subject matter. At the beginning of each of the first eight categories of papers, there is a commentary on the

content and significance of all of the papers in the category. The two short final categories do not have any commentaries. The editor would like to thank Dr. Richard Friedberg for his assistance in the early stages of the editorial work on this project, as well as for writing commentaries on the papers of Categories III and IV. I would also like to thank Dr. Norman Christ for writing the commentary on the papers of Category VII. The assistance of Irene Tramm was invaluable in many aspects of preparing this collection, including locating copies of Lee's papers.

State, Economy and the Great Divergence provides a new analysis of what has become the central debate in global economic history: the 'great divergence' between European and Asian growth. Focusing on early modern China and Western Europe, in particular Great Britain, this book offers a new level of detail on comparative state formation that has wide-reaching implications for European, Eurasian and global history. Beginning with an overview of the historiography, Peer Vries goes on to extend and develop the debate, critically engaging with the huge volume of literature published on the topic to date. Incorporating recent insights, he offers a compelling alternative

to the claims to East-West equivalence, or Asian superiority, which have come to dominate discourse surrounding this issue. This is a vital update to a key issue in global economic history and, as such, is essential reading for students and scholars interested in keeping up to speed with the on-going debates. The main focus of the book is the geological and geophysical interpretation of sedimentary basins along the South, Central and North Atlantic conjugate margins, but concepts derived from physical models, outcrop analogues and present-day

margins are also discussed in some chapters. There is an encompassing description of several conjugate margins worldwide, based on recent geophysical and geological datasets. An overview of important aspects related to the geodynamic development and petroleum geology of Atlantic-type sedimentary basins is also included. Several chapters analyse genetic mechanisms and break-up processes associated with rift-phase structures and salt tectonics, providing a full description of conjugate margin basins based on deep seismic profiles and potential field methods.--

This book approaches its subject matter by promoting concepts, methods and solutions for the digital transformation of manufacturing through service orientation in holonic and agent-based control with distributed intelligence. The scientific theme of the book concerns “Manufacturing as a Service”, developed by virtualizing and encapsulating manufacturing resources, activities and controls into cloud networked services in an open perspective that spans models from shop floor resource allocation to enterprise infrastructure sharing. The papers included in the application space have a profound human dedication and aim at solving societal needs

serving the partnership of the future—people and industry in the era of Society 5.0. The book’s readership includes researchers and engineers working in manufacturing, supply chains and logistics areas who innovate, develop and use digital control solutions and students enrolled in Engineering and Service Science programs.

"In a meticulously researched study, David Bearce demonstrates that, contrary to predictions, financial globalization has not resulted in a systematic convergence of

national monetary policies. The book is a must-read for students of the political economy of international finance. Highlighting the critical role of partisan politics in determining policy outcomes, Bearce adds a new and important dimension to our understanding of the impacts of international capital mobility in the contemporary era." —Benjamin Jerry Cohen, University of California, Santa Barbara "Bearce offers a compelling analysis of partisan economic policy in an open economy. By analyzing both fiscal and monetary policies, Bearce extends our

understanding of how the electoral imperative conditions policy behavior. His conclusions will have to be addressed in any future debate about the topic." —William Bernhard, University of Illinois at Urbana-Champaign "Interest group divisions over exchange rates and macroeconomic policy have been at the center of international political economy research for about 20 years. Political scientists have studied these cleavages, focusing on the policy interests of various industry groups. On a separate but parallel track, another group of researchers

explored the relationship between partisan politics and macroeconomic policy choices. In this exceptionally well researched book, Bearce integrates these two analytical traditions. Noting that industry groups are typically important organized constituents in left-wing and right-wing political parties, Bearce demonstrates how macroeconomic policy outcomes in advanced countries vary systematically with the alternation of political parties in government." —J. Lawrence Broz, University of California, San Diego David H. Bearce is Assistant Professor of Political

Science at the University of Pittsburgh.

Abuse of social constructs with the help of factions in Veronica Roth's "The Divergent" Springer Nature

The thesis consists of three papers focussing on the study of nonlinear elliptic partial differential equations in a nonempty open subset Ω of the n -dimensional Euclidean space \mathbb{R}^n . We study the existence and uniqueness of the solutions, as well as their behaviour near the boundary of Ω . The behaviour of the solutions at infinity is also discussed when Ω is unbounded. In Paper A, we consider a mixed boundary value problem for the p -Laplace equation $\Delta_p u := \operatorname{div}(|\nabla u|$

$^{p-2}\nabla u) = 0$ in an open infinite circular half-cylinder with prescribed Dirichlet boundary data on a part of the boundary and zero Neumann boundary data on the rest. By a suitable transformation of the independent variables, this mixed problem is transformed into a Dirichlet problem for a degenerate (weighted) elliptic equation on a bounded set. By analysing the transformed problem in weighted Sobolev spaces, it is possible to obtain the existence of continuous weak solutions to the mixed problem, both for Sobolev and for continuous data on the Dirichlet part of the boundary. A characterisation of the boundary regularity of the point at infinity is

obtained in terms of a new variational capacity adapted to the cylinder. In Paper B, we study Perron solutions to the Dirichlet problem for the degenerate quasilinear elliptic equation $\operatorname{div} A(x, \nabla u) = 0$ in a bounded open subset of \mathbb{R}^n . The vector-valued function A satisfies the standard ellipticity assumptions with a parameter $1 < p < \infty$ and a p -admissible weight w . For general boundary data, the Perron method produces a lower and an upper solution, and if they coincide then the boundary data are called resolvable. We show that arbitrary perturbations on sets of weighted p -capacity zero of continuous (and quasicontinuous Sobolev) boundary data f are resolvable, and

that the Perron solutions for f and such perturbations coincide. As a consequence, it is also proved that the Perron solution with continuous boundary data is the unique bounded continuous weak solution that takes the required boundary data outside a set of weighted p -capacity zero. Some results in Paper C are a generalisation of those in Paper A, extended to quasilinear elliptic equations of the form $\operatorname{div} A(x, \nabla u) = 0$. Here, results from Paper B are used to prove the existence and uniqueness of continuous weak solutions to the mixed boundary value problem for continuous Dirichlet data. Regularity of the boundary point at infinity for the equation div

$A(x, \nabla u) = 0$ is characterised by a Wiener type criterion. We show that sets of Sobolev p -capacity zero are removable for the solutions and also discuss the behaviour of the solutions at ∞ . In particular, a certain trichotomy is proved, similar to the Phragmén–Lindelöf principle. The Radical Cure of Extreme Divergent Strabismus Walter de Gruyter GmbH & Co KG For the past three decades, America has steadily become a nation of haves and have-nots. Our incomes are increasingly unequal. This steady growing apart is often mentioned as a troubling indicator by scholars and policy analysts, though

seldom addressed by politicians. What economics Nobelist Paul Krugman terms "the Great Divergence" has till now been treated as little more than a talking point, a rhetorical club to be wielded in ideological battles. But this Great Divergence may be the most important change in this country during our lifetimes—a drastic, elemental change in the character of American society, and not at all for the better. The inequality gap is much more than a left-right hot potato—its causes and consequences call for a patient, non-partisan exploration. Timothy Noah's

The Great Divergence, based on the 21st century, and a work that his award-winning series of articles for Slate, surveys the roots of the wealth gap, drawing on the best thinking of contemporary economists and political scientists. Noah also explores potential solutions to the problem, and explores why the growing rich-poor divide has sparked remarkably little public anger, in contrast to social unrest that prevailed before the New Deal. The Great Divergence is poised to be one of the most talked-about books of 2012, a jump-start to the national conversation about the shape of American society in

will help frame the debate in a Presidential election year.
