The best-selling introduction to evidence-based medicine

In a clear and engaging style, How to Read a Paper demystifies evidence-based medicine and explains how to critically appraise published research and also put the findings into practice. An ideal introduction to evidence-based medicine, How to Read a Paper explains what to look for in different types of papers and how best to evaluate the literature and then implement the findings in an evidence-based, patient-centred way. Helpful checklist summaries of the key points in each chapter provide a useful framework for applying the principles of evidence-based medicine in everyday practice. This fifth edition has been fully updated with new examples and references to reflect recent developments and current practice. It also includes two new chapters on applying evidence-based medicine with patients and on the common criticisms of evidence-based medicine and responses. How to Read a Paper is a standard text for medical and nursing

schools as well as a friendly guide for everyone wanting to teach or learn the basics of evidence-based medicine. 50 Studies Every Doctor Should

Know presents key studies that have shaped the practice of medicine. Selected using a rigorous methodology, the studies cover topics ranging from dieting to cardiovascular disease, insomnia to obstetrics. For each study, a concise summary is presented with an emphasis on the results and limitations of the study, and its implications for practice. Brief information on other relevant studies is provided, and an illustrative clinical case concludes each review. A section of review questions and answers is included at the back of the book to ensure that readers take away

the key messages from each study. This book is a must-read for health care professionals and anyone who wants to learn more about the data behind clinical practice.

The Classic Papers National Academies Press

The New York Times bestselling author of *Being Mortal* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything

from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

Women, a powerful look at how our culture treats—or mistreats—the health concerns of women. In *Pain and Prejudice*, acclaimed investigative reporter Gabrielle Jackson takes readers behind the scenes of doctor’s offices, pharmaceutical companies, and research labs to show that—at nearly every level of healthcare—men’s health claims are treated as default, whereas women’s are often viewed as atypical, exaggerated, and even completely fabricated. The impacts of this bias? Women are losing time, money, and their lives trying to navigate a healthcare system designed for men. Almost all medical research today is performed on men or male mice, making most treatments tailored to male bodies only. Even conditions that are overwhelmingly more common in women, such as chronic pain, are researched on mostly male bodies. Doctors and researchers who do specialize in women’s healthcare are penalized financially, as procedures performed on men pay higher. Meanwhile, women are reporting feeling ignored and dismissed at their doctor’s offices on a regular basis. Jackson interweaves these and more stunning revelations in the book with her own story of suffering from endometriosis, a condition that affects up to 20% of American women but is poorly understood and frequently misdiagnosed. She also includes an up-to-the-minute epilogue on the ways that Covid-19 are impacting women in different and sometimes more long-lasting ways than

men. A rich combination of journalism and personal narrative, *Pain and Prejudice* reveals a dangerously flawed system, and offers solutions for a safer, more equitable future.

The Ultimate Guide to Getting Into Medical School
Springer Science & Business Media

How to Read a Paper describes the different types of clinical research reporting, and explains how to critically appraise the publications. The book provides the tools to find and evaluate the literature, and implement the findings in an evidence-based, patient-centered way.

Written for anyone in the health care professions who has little or no knowledge of evidence-based medicine, it provides a clear understanding of the

concepts and how to put them into practice at the basic, clinical level. Changes for the 4th edition The fourth edition will include two new chapters on important developments in health care research and delivery, but otherwise retains its original style, size, and scope. New chapter on quality improvement – describing papers on quality improvement projects using ebm methods; this will extend the readership to non clinical health care professionals working in hospitals and family practice, and to nurse specialists and practice nurses working in this field New chapter on complex interventions - how to set up research projects involving both qualitative and quantitative methodology (known as mixed methods)

Thorough revision and updating of existing chapters and references New illustrations – diagrammatic representations of ebm concepts

Recent advances in gastroenterology and hepatology as well as new findings in biliary and pancreatic diseases are presented in the proceedings of the 86th annual congress of the Japanese Society of Gastroenterology. From the hundreds of papers delivered at the congress, 70 were selected for inclusion here. Opening with special lectures on gastroenterology in the new millennium, ulcerative colitis-pathophysiology and therapy, and life style-related diseases and

gastroenterology, the volume is divided into sections reflecting the major concerns of researchers in the science of digestive diseases in Japan today: apoptosis in digestive organs, nitric oxide, transcription factors in digestive organs, antigen-presenting cells, pathology of inflammatory bowel disease, NSAID-induced gastric lesions, microcirculation in digestive diseases, hepatic regeneration, and hepatic fibrosis.

"The Association of Theological Schools states, The purpose of the Doctor of Ministry degree is to enhance the practice of ministry for persons who hold the MDiv degree and have engaged in ministerial leadership. The goals an institution adopts for

the DMin should include an advanced understanding of the nature and purposes of ministry, enhanced competencies in pastoral analysis and ministerial skills, the integration of these dimensions into the theologically reflective practice of ministry, new knowledge about the practice of ministry, and continued growth in spiritual maturity . . . The program shall include the design and completion of a written doctoral-level project that addresses both the nature and the practice of ministry. The project should be of sufficient quality that it contributes to the practice of ministry as judged by professional standards and has the potential for application in other contexts of ministry. Doctor of Ministry projects are a type of participatory action research that introduces an intervention in order to provide ministerial

leadership for the transformation of the organization. The intent of Qualitative Research: A Multi-Methods Approach for Doctor of Ministry Projects is to provide the fundamentals of qualitative research so that significant projects and theses emerge" -- Publisher description.

What Patients Say, What Doctors Hear National Academies Press

Cartoonist and doctor Ian Williams introduces us to the troubled life of Dr Iwan James, as all humanity, it seems, passes through his surgery door. Incontinent old ladies, men with eagle tattoos, traumatized widowers – Iwan's patients cause him both empathy and dismay, as he tries to do his best in a world of limited time and budgetary constraints, and in which there

are no easy answers. His feelings for his partners also cause him grief: something more than friendship for the sympathetic Dr Lois Pritchard, and not a little frustration at the prankish and obstructive Dr Robert Smith. Iwan's cycling trips with his friend Arthur provide some welcome relief, but even the landscape is imbued with his patients' distress. As we explore the phantoms from Iwan's past, we too begin to feel compassion for The Bad Doctor, and ask what is the dividing line between patient and provider? Wry, comic, graphic, from the humdrum to the tragic, his patients' stories are the spokes that make Iwan's wheels go round in this humane and eloquently drawn account of a doctor's life.

How the Primary Care Crisis Endangers the Lives of Americans Penguin UK

From the parking lot to the exam room, doctors can improve the physical surroundings for their patients, yet often they do

not. Given the numerous and varied duties doctors must perform, it may fall to the design profession to implement changes, many based on research, to improve healthcare experiences. From location and layout to furnishings and positive distractions, this book provides evidence-based information about the physical environment to help doctors and those who design medical workspaces improve the experience of health care. Along with its research base, a special aspect of this book is the integration of relevant historical material about the office practice of physicians at the beginning of the twentieth century. Many of their design solutions are viable today. In addition to improving the physical design of healthcare

facilities, author Ann Sloan Devlin is the granddaughter, daughter, and niece of physicians, as well as the granddaughter and daughter of nurses. She worked in a hospital during college, and has visited a good many practitioners' offices in medical office buildings and ambulatory care settings.

This book addresses an overlooked location of care: the doctor's office suite.

The Checklist Manifesto John Geyman, M.D.

Eating disorders are potentially life-threatening psychiatric illnesses commonly accompanied by serious medical problems.

They typically appear during adolescence or early adulthood, a time when young people are heading to college or interviewing for a first job. Many people recover fully from eating disorders, but others become chronically ill, and symptoms can continue into middle age and beyond. Written by leading

authorities in eating disorders research and treatment, *Eating Disorders: What Everyone Needs to Know*® answers common questions about eating disorders, including anorexia nervosa, bulimia nervosa, and binge eating disorder, as well as a newly described condition, avoidant/restrictive food intake disorder (ARFID). Practical yet authoritative, the book defines the eating disorders, explains what we know about them based on the latest science, and describes how treatment works. Importantly, the book dispels common myths about eating disorders, such as the notion that they occur only amongst the affluent, that they affect only girls and women, or that they simply result from environmental factors such as the fashion industry and society's obsession with thinness. In reality, as the book explains, there is substantial evidence that eating disorders are brain-based illnesses that do not discriminate, and that they have been around for a very long time. *Eating Disorders: What Everyone Needs to Know*® is essential reading for those

seeking authoritative and current information about these often misunderstood illnesses.

Clinical Research for the Doctor of Nursing Practice Routledge

Our market-based, profit-driven health care system in the United States has put necessary care increasingly beyond the reach of ordinary Americans.

Primary health care, the fundamental foundation of all high-performing health care systems in the world, is a critical but ignored casualty of the current system. Unfortunately, primary care is often poorly understood, even within the health professions. This book describes what has become a crisis in primary care, defines its central role, analyzes the reasons for its decline, and assesses its impacts on patients and

families. A constructive approach is presented to rebuild and transform U.S. primary care with the urgent goal to address the nation's problems of access, cost, quality and equity of health care for all Americans.

DMT: The Spirit Molecule

Walter de Gruyter

A clinical psychiatrist explores the effects of DMT, one of the most powerful psychedelics known. • A behind-the-scenes look at the cutting edge of psychedelic research. •

Provides a unique scientific explanation for the phenomenon of alien abduction experiences. From 1990 to 1995 Dr. Rick Strassman conducted U.S. Government-approved and funded clinical research at the University of New Mexico in which he injected sixty volunteers with DMT, one of the most powerful psychedelics known. His detailed account of those sessions is an extraordinarily riveting inquiry into the nature of the human mind and the therapeutic potential of psychedelics. DMT, a plant-derived chemical found in the psychedelic Amazon brew, ayahuasca, is also

manufactured by the human brain. In Strassman's volunteers, it consistently produced near-death and mystical experiences. Many reported convincing encounters with intelligent nonhuman presences, aliens, angels, and spirits. Nearly all felt that the sessions were among the most profound experiences of their lives. Strassman's research connects DMT with the pineal gland, considered by Hindus to be the site of the seventh chakra and by Rene Descartes to be the seat of the soul. DMT: The Spirit Molecule makes the bold case that DMT, naturally released by the pineal gland, facilitates the soul's movement in and out of the body and is an integral part of the birth and death experiences, as well as the highest states of meditation and even sexual transcendence. Strassman also believes that "alien abduction experiences" are brought on by accidental

releases of DMT. If used wisely, DMT could trigger a period of remarkable progress in the scientific exploration of the most mystical regions of the human mind and soul. *Suggestions to Medical Authors and A.M.A. Style Book* Metropolitan Books 'My first serious blackout marked the line between sanity and insanity. Though I would have moments of lucidity over the coming days and weeks, I would never again be the same person ...' Susannah Cahalan was a happy, clever, healthy twenty-four-year old. Then one day she woke up in hospital, with no memory of what had happened or how she had got there. Within weeks, she would be transformed into someone unrecognizable, descending into a state of acute psychosis, undergoing rages

and convulsions, hallucinating that her father had murdered his wife; that she could control time with her mind. Everything she had taken for granted about her life, and who she was, was wiped out. Brain on Fire is Susannah's story of her terrifying descent into madness and the desperate hunt for a diagnosis, as, after dozens of tests and scans, baffled doctors concluded she should be confined in a psychiatric ward. It is also the story of how one brilliant man, Syria-born Dr Najjar, finally proved - using a simple pen and paper - that Susannah's psychotic behaviour was caused by a rare autoimmune disease attacking her brain. His diagnosis of this little-known condition, thought to have been the real cause of devil-possessions through history,

saved her life, and possibly the lives of many others. Cahalan takes readers inside this newly-discovered disease through the progress of her own harrowing journey, piecing it together using memories, journals, hospital videos and records. Written with passionate honesty and intelligence, Brain on Fire is a searingly personal yet universal book, which asks what happens when your identity is suddenly destroyed, and how you get it back. 'With eagle-eye precision and brutal honesty, Susannah Cahalan turns her journalistic gaze on herself as she bravely looks back on one of the most harrowing and unimaginable experiences one could ever face: the loss of mind, body and self. Brain on Fire is a mesmerizing story' -Mira Bartók, New York Times

bestselling author of *The Memory Palace* Susannah Cahalan is a reporter on the New York Post, and the recipient of the 2010 Silurian Award of Excellence in Journalism for Feature Writing. Her writing has also appeared in the New York Times, and is frequently picked up by the Daily Mail, Gawker, Gothamist, AOL and Yahoo among other news aggregator sites.

Occupational Outlook

Handbook Karger Medical and Scientific Publishers

We are in a real sense, our stories. Who we are, what we think, and how we act are all shaped by the many large and small stories that make up the discourse embedded in our multi-sensory social experience. It is this postmodern understanding of identity and reality that has prompted the authors to fashion a new way of thinking

about doing research in faith communities today, particularly through a Doctor of Ministry program. It is our belief that, in order for faith communities to define themselves and to know what to do in ministry, they must first understand the multiple stories which intersect with a given ministry situation in their specific context.
