This book is designed
to apprise the

students of chemical engineering with a variety of different processes of chemical technologies. The book is richly illustrated and covers the essential information with the help of flow diagrams, enabling the students to gain a full understanding of both the fundamental concepts and chemical reactions involved in process technologies. Newer technologies have been dealt with and some technologies which have lost their relevance have been omitted. Computer simulation methods have been described for many important technologies. In short, the book considers computer design tools and design software, in a manner that integrates this knowledge smoothly into the main subject. The book is expected to become useful not only to the students for courses in Chemical Technology but also to practising engineers and process designers for innovative process development. There are topics on natural products and fermentation process chemicals, organic chemicals, inorganic chemicals, refinery operations, oil and gas operations and nanotechnology products. In some of

these topics, computer simulation and costing examples are included. An illustration of modelling and simulation using C++, is also given as an example of user-written programs for simulation. Another method that can be used for simulation is the use of spreadsheets, which is also described with the help of an example. A new important topic of

today being 'polysilicon' used in the manufacture of computer chips and solar panels, is also covered in detail.

Cost Management in Plastics Processing: Strategies, Targets, Techniques, and Tools, Fourth Edition, makes readers think about current practices and how to go forward with effective cost management. This is a practical workbook that provides a structured approach to reducing costs in plastics processing for all the major plastics shaping processes (moulding, extrusion,

forming) as well as elsewhere in the company (e.g., in factory services and non-manufacturing areas). Competition in all manufacturing sectors is increasing, and there is continuous pressure to drive costs down and to increase cost management. Good cost management improves profits and margins, improves management control and opens the door to becoming a world-class company. The approach throughout this book looks rigorously at where costs are incurred and proposes projects and targets for cost reduction. This book is designed to provide a well-structured map broken down into simple tasks and achievable goals. This book offers a structured approach to the techniques of cost

management, from how costs are calculated by accountants, to the effective use of machines and labor, to the minimization of waste. It begins by looking at traditional methods of accounting and costing and whether these are helpful or accurate for project management. Practical examples of cost management in plastics processing are included, together with many useful flow charts and diagrams to illustrate the points under discussion. Enables plastics processors to institute an effective cost management system, going beyond simply trying to cut costs. Provides a holistic perspective on cost management, shining a light on areas on costs which may not have previously been considered or

accounted for, and proposing projects and targets for cost reduction. Serves as a route map to help companies move toward improved margins and greater profitability.

Project Management process is mainly intended to serve as a general information guide for the young and fresh engineers who enter into the project management consultancy environment. The organizations may provide a broad

outline of the project management in general during the induction program at entry level. But it is still desirable to have a complete idea and total understanding of the project management functions on a day to day basis. This aspect of project management is highlighted in the Part — A of this book. Part — A provides a bird ' s eye view of the very beginning of development of engineering as a profession, with a holistic view of traditional project management and the project scenarios, and project execution methods with an emphasis on how the project engineering is done? What are the basic steps in the Engineering Design Process? etc. Part — B is on the infrastructure engineering of a grass root mega

project. This is an extension of the pre-project activities presented in Part — A . It is aimed at providing project management process from ground preparation to setting up the required plant facilities. As quality is an essential part of the deliverable products and services, project quality and project engineering quality aspects are also presented as per Quality Systems Management System Requirements based on ISO 9001-2015..
