Workflow Management with SAP®

WebFlow® Industrial Press

In this IBM® Redbooks® publication, we give an overview of different data management topics related to a typical SAP® data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task. We explain SAP basic concepts and the

issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data archiving using IBM DB2® CommonStore for SAP, and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and comprehensive data backup solution using the IBM Tivoli Storage Management product family.

This book is written keeping in mind the students of SAP production planning, Engineering undergraduates, Management graduates and working professionals. For lucid understanding of concepts to the readers, extensive use of screenshots has been made in the book. The book begins with explaining organizational structure, not only the elements important from PP point of view, but also those important from MM and SD point of view. After organizational structure, an entire chapter has been dedicated to configurations required to setup master data, order type and processes for production planning in discrete industry. Consultants often face some specific issues while creating certain master data or executing certain processes, this book also discusses solution to such issues. This book introduces you with the concept of MRP and essential configuration required for setting up MRP in SAP system. You will also be guided through two important production strategies – Make-to-stock and Make-to-order – showing you both end-to-end scenarios in discrete

manufacturing with the help of screenshots. Furthermore, two important types of quality inspection scenarios – Inprocess Inspection and Final Inspection – have been shown along with quality management master data setup. The last chapter is a very important chapter based on ASAP methodology of SAP implementation providing you guidance through each phase of implementation and equipping you with a good understanding of business processes and requirements. Thus this book brings you a knowledge bank covering diverse topics from configurations and production processes to quality management integration to implementation project.
