There are a variety of considerations you'll need to take into account when migrating your solutions to BizTalk 2016. In this book, you'll find detailed information about how to migrate your components "as-is," as well as recompile them with the latest version of Visual Studio. You'll look at ways to improve your components pre-migration, as well as troubleshoot issues within these components. You'll learn how to make intelligent mapping updates, especially with XSLT, and how to simplify your overall architecture. Additionally, working with BizTalk 2016 in an Azure environment and building BizTalk Azure Services are covered. Readers will look at migrating maps, orchestrations, .NET assemblies, database components, EDI parties and configurations, and other artifacts found in BizTalk solutions. They will also be able to quickly come to an understanding of what will be involved in a migration and what will be required for resourcing and costs associated with a migration. Readers will find information that will cover virtually every aspect of their upgrade to BizTalk 2016, and should come away with a simpler solution once that migration is complete.

Data Intensive Computing refers to capturing, managing, analyzing, and understanding data at volumes and rates that push the frontiers of current technologies. The challenge of data intensive computing is to provide the hardware architectures and related software systems and techniques which are capable of transforming ultra-large data into valuable knowledge. Handbook of Data Intensive Computing is written by leading international experts in the field. Experts from academia, research laboratories and private industry address both theory and application. Data intensive computing demands a fundamentally different set of principles than mainstream computing. Data-intensive applications typically are well suited for large-scale parallelism over the data and also require an extremely high degree of fault-tolerance, reliability, and availability. Real-world examples are provided throughout the book. Handbook of Data Intensive Computing is designed as a reference for practitioners and researchers, including programmers, computer and system infrastructure designers, and developers. This book can also be beneficial for business managers, entrepreneurs, and investors.

Foundation of Information Technology is a judiciously developed series of textbooks on the syllabus devised by the Central Board of Secondary Education for classes 9 and 10. Keeping in mind the grasping power of the students, the books focus on the relevant theory and its applications and practical learning through sequential steps, rather than the elaborate textual study for chapters. Each book is divided into chapters that are self-explanatory and encompass the relevant concepts of the topic concerned. The books do not contain any repetitive content and hence are crisp and condensed. The exercises at the end of the chapters call for active and attentive participation of the learners thereby testing their knowledge and helping in self-assessment. The CCE format of the questions appearing in CBSE exam papers has been followed in developing exercises in the book. There are separate books on MS Office 2010 and OpenOffice in class 9.
