Globalization, increased economic and geopolitical uncertainty, technological advancements, and a rise in the number of regulations and legislations have led to a significant rise in the importance, volume, and complexity of modern contractual agreements. Yet, in spite of these profound changes, many organizations still manage the contracting process in a fragmented, manual, and ad-hoc manner, resulting in poor contract visibility, ineffective monitoring and management of contract compliance, and inadequate analysis of contract performance. The net effect of this has been a heightened interest in re-engineering and automation of Enterprise Contract Management (ECM) processes across industry sectors and geographies. **Enterprise Contract Management: A Practical Guide to Successfully Implementing an ECM Solution** addresses all the questions surrounding ECM, ECM solutions, and the project management, change

management, and risk management considerations to ensure its successful implementation. This concise text will help your organization manage the challenges of the contract life cycle and the key success factors and pitfalls in a typical ECM solution. It is a must read for corporate executives, buyers, procurement and strategic sourcing specialists, contract administrators and procurement managers. There is currently no other book available on ECM solutions. All existing books on contract management focus on the legal aspects of contracts, but none describe the functions, features, capabilities of technology solutions that support ECM, nor do they explain the key considerations for ensuring a successful ECM solution implementation. Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. *Designing Portals: Opportunities and Challenges* discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal

With so many organisations using projects to implement change, and easy-to-use computer packages greatly reducing the mechanistic aspects of project planning, project managers now require more highly developed leadership skills than even before. Managing Projects, Managing People draws on theoretical aspects of managing and mitigating risks, motivational and leadership theory and excellent communication to provide the reader with the skills required for project management in today's business environment. In addition to the theoretical foundations, attention is given to PRINCE (Projects IN Controlled Environments) that supports and frames the application of projects to ensure conformance, compliance, adequate reporting

procedures, due diligence and communication to all stakeholders. Managing Projects, Managing People takes a nontraditional approach to project management and is designed to facilitate the reader's understanding of the principles of managing a project. The book addresses most types of project, but particular emphasis is given to the non-manufacturing sector and, especially, the services sector. Chapters contain examples and relevant case studies to further demonstrate and support the foundations and skills addressed throughout. For academics prescribing this text, a comprehensive instructor's manual and power point presentations are provided on CD.

Trademarks Probus Professional Pub It has been said that the only asset that a lawyer has is time. But the reality is that a lawyer's greatest asset is information. The practice and the business of law is all about information exchange. The flow of information travels in a number of different directions during the life of a case. A client communicates certain facts to a lawyer. The lawyer assimilates those facts and seeks out specialised legal information which may be applicable to those facts. In the course of a generation there has been a technological revolution which represents a paradigm shift in the flow of information and communication. Collisions in the Digital Paradigm is about how the law deals with digital information technologies and some of the problems that arise when the law has to deal with issues arising in a new paradigm.
