It has been said that the only asset that a lawyer has is time. But the reality is that a lawyer's greatest asset is information. The practice and the business of law is all about information exchange. The flow of information travels in a number of different directions during the life of a case. A client communicates certain facts to a lawyer. The lawyer assimilates those facts and seeks out specialised legal information which may be applicable to those facts. In the course of a generation there has been a technological revolution which represents a paradigm shift in the flow of information and communication. Collisions in the Digital Paradigm is about how the law deals with digital information technologies and some of the problems that arise when the law has to deal with issues arising in a new paradigm.

Knowledge Management - A Blueprint for Delivery Routledge

With so many organisations using projects to implement change, and easy-to-use computer packages greatly reducing the mechanistic aspects of project planning, project managers now require more highly developed leadership skills than even before. *Managing Projects, Managing People* draws on theoretical aspects of managing and mitigating risks,

motivational and leadership theory and excellent communication to provide the reader with the skills required for project management in today's business environment. In addition to the theoretical foundations, attention is given to PRINCE (Projects IN Controlled Environments) that supports and frames the application of projects to ensure conformance, compliance, adequate reporting procedures, due diligence and communication to all stakeholders. *Managing Projects, Managing People* takes a nontraditional approach to project management and is designed to facilitate the reader's understanding of the principles of managing a project. The book addresses most types of project, but particular emphasis is given to the non-manufacturing sector and, especially, the services sector. Chapters contain examples and relevant case studies to further demonstrate and support the foundations and skills addressed throughout. For academics prescribing this text, a comprehensive instructor's manual and power point presentations are provided on CD.

This book describes the importance of the goal and scope phase for the entire LCA study. In this first phase of the LCA framework (ISO standardized), the purpose of the assessment is defined and decisions are made about the details of the industrial system being studied and how the study will be conducted. Selecting impact categories, category indicators, characterization models, and peer review is decided during goal and scope definition. The book provides practical guidance and an overview of LCIA methods available in LCA software.

Although not specified in the ISO standards, Attributional LCA and Consequential LCA are presented in order to appropriately determine the goal and scope of an assessment. The book closes with the interconnection between goal and scope definition and the interpretation phase. Example goal and scope documents for attributional and consequential LCAs are provided in the annexes.

Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. Designing Portals: Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.
