Strategies National Academies Press

Like the three editions that preceded it, this  
new edition targets markets in health care

practice and educational settings. It addresses  
practicing nurses and nursing students,  
together with nursing leadership and nursing  
faculty. It speaks to nursing informatics  
specialists and—in a departure from earlier  
editions of this title—to all nurses, regardless  
of their specialty, extending its usefulness as  
a text as noted below. In recognition of the  
evolving electronic health information  
environment and of interdisciplinary health  
care teams, the book is designed to be of  
interest to members of other health care  
professions (quality officers, administrators,  
etc.) as well as health information technology  
professionals (in health care facilities and in  
industry). The book will include numerous  
relevant case studies to illustrate the theories  
and principles discussed, making it an ideal  
candidate for use within nursing curricula  
(both undergraduate and graduate), as well  
as continuing education and staff  
development programs. This book honors  
the format established by the first three  
editions by including a content array and

questions to guide the reader. This 4th edition also includes numerous brief case studies that help to illustrate the theories and practices described within the various chapters. Most of these “ mini-cases ” are provided by members of professional nursing organizations that comprise the TIGER Initiative. These mini-cases are listed in the front matter and highlighted via formatting throughout the text.

*The Future of Nursing* explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Providing holistic care to patients included care to the spirit, mind and body. Spiritual care needs to be administered and documented; however, in many instances, spiritual care and documentation of the care is greatly lacking. One barrier to the delivery of spiritual care by nurses is a lack of education regarding spiritual care. The

purpose of this research project was to determine the influence of increased spiritual care education on nursing documentation of spiritual care in a long-term, acute-care hospital. The theoretical framework of the theory of human caring by Watson was chosen due to the relationship of the components of the spirit, mind, and body and how each one is interdependent on the other. Stoll's spiritual care assessment was incorporated into the education presentation. Knowles' theory of adult learning was used to deliver the information. The educational program was presented to a self-selected sample of 14 nurses and included pretest and posttest, PowerPoint presentation, and a review of the hospital's computerized documentation procedures. The nurses read two literature sources showed no change in the median scores of the pretest (90%) and posttest (90%). The chart audits completed before and after the education offering revealed no increase in the percentage of documentation of spiritual care.

Implications for practice, research, and education were identified that will promote proper documentation of spiritual care to patients.

The Quest for Magnet Recognition CRC Press

What does professional responsibility entail in an increasingly insecure, unpredictable and de-regulated world? This is the core question addressed in this text. The point of departure for the various contributions is that professional responsibility is a way of being in the world that includes a particular mandate – to behave in a manner consistent with moral and societal obligations as a professional. Increasingly, however, there is a lack of consensus as to what such mandates imply, and even more dissensus as to what appropriate exercise of responsibility entails. One of the distinctive features of this book is the manner in which it combines normative and empirical dimensions. It moves beyond dualistic perspectives to create a more inclusive conversation on professional responsibility. In the face of increasing complexity of professional work, professional responsibility remains open to further development. The book signals direction for the development of professional responsibility, and while seeking to give direction to ongoing deliberations avoids the pitfalls of performativity. The chapters are grounded in a variety of disciplinary perspectives and traverse various professional boundaries in a self-reflexive manner to create more inclusive, transformative and generative narratives on professional responsibility. This is achieved by: Focusing on normative dimensions of professional work and combining these with a focus on empirical

aspects of professional practice in a variety of setting, and Recognising the inevitable tensions between personal trust and responsibility, and largely depersonalised policies and strategies of quality control when normative and empirical aspects of professional responsibility are situated within their policy environments. The concluding narrative moves beyond deconstruction, complexity and critique of these considerations to a construction of new imagined horizons of professional responsibility from theoretical, conceptual and practical perspectives. This text sets out to transform professional responsibility through a re-configuration of its constituent elements in imaginative and creative ways and by indicating the 'real world' import of re-charting the field.
