[Improved SSN Verification and Exchange of States' Driver Records Would Enhance Identity Verification : Report to Congressional Requesters](#) "O'Reilly Media, Inc."

The Social Security number (SSN) was created in 1936 as a means to track workers earnings and eligibility for Social Security benefits. Since that time, the number has been used for myriad non-Social Security purposes. Private sector use of the SSN has grown exponentially. For example, businesses may ask individuals to provide their SSNs when they apply for credit, seek medical or other insurance coverage, rent an apartment, or place an order for merchandise. In addition, many federal, state, and local government agencies also use the SSN. In some cases, these government agencies use SSNs as they administer their programs to deliver services or benefits to the public. Individuals who provide SSNs to receive these services and benefits may expect the SSNs to be considered confidential and thus protected from public disclosure. In other cases, government agencies serve as the repository for records or documents that are routinely made available to the public for inspection. These public records may contain SSNs.

Pursuant to a legislative requirement, GAO: (1) explored ways to reduce the potential for fraud in obtaining and using social security number (SSN) cards; and (2) identified technological alternatives for making the card more resistant to counterfeiting. GAO found that: (1) the SSN application process was vulnerable to fraud, since there were thousands of different documents applicants could use to support their applications; (2) support documents, such as birth certificates, were easy to obtain, counterfeit, or alter, with no practical way for the Social Security Administration (SSA) to verify them; and (3) employers were untrained in document verification. GAO also found that: (1) designating the SSN card as the only acceptable document aliens could use for employment eligibility verification under the Immigration Reform and Control Act (IRCA) would simplify employment eligibility; (2) Immigration and Naturalization Service (INS) certification of alien employment eligibility could improve SSA procedures; (3) although magnetic strips, integrated circuitry, and lasers would make SSN cards more resistant to

counterfeiting, they would not preclude persons from using fraudulent documents to obtain valid cards; (4) the introduction of color copiers has posed a significant threat to SSN card integrity; and (5) although IRCA provided that general revenues finance changes to the SSN card, the Social Security Trust Funds paid for the replacement of 1.6 million cards at a cost of \$11.6 million.

The SSN was created in 1936 to track workers' earnings and eligibility for Social Security (SS) benefits. Since that time, the SSN has been used for many non-SS purposes, and private sector use of the SSN has grown. This has raised concern over how this personal info. is being used and protected, esp. with the growth in electronic record keep. and the explosion of info. over the Internet, combined with a rise in identity theft. This report studied: the extent and nature of Fed., state, and county gov't. agencies' use of SSNs; the actions gov't. agencies take to safeguard SSNs from improper use; the extent and nature of Fed., state, and county governments' use of SSNs when they are in public records (PR); and the options available to safeguard SSNs when they are in PR.

The social security number (SSN) has become a widespread means of identification in the United States. As its use as an identifier has grown, so has the opportunity for its misuse, often to fraudulently obtain employment or monetary benefits. GAO reported on whether there is a need for redesigning and reissuing tamper-resistant social security cards to prevent misuse of the card, and the appropriateness of using social security trust funds to pay for such reissuance. GAO found that reissuing the cards will not correct the underlying conditions contributing to social security number and card misuse. For instance, it will not prevent individuals from obtaining social security numbers using false identity documents or from using someone else's number and card. Furthermore, neither the Social Security Administration (SSA) nor other public or private entities would benefit appreciably from such reissuance. Therefore, GAO questioned whether the cost of reissuing the cards, which would be at least \$850 million and could be as much as \$2 billion, is justifiable. Additionally, from a logistical standpoint, reissuance may not be practicable and may cause adverse public reaction. GAO found that SSA has taken other steps to strengthen the integrity of the social security numbering system. Currently, all applicants requesting original social security numbers must submit documentary evidence of age, identity, and citizenship or alien status along with the application. SSA has identified many fraudulently obtained numbers in its system but has not flagged them for SSA and other agency uses. Some of the problems contributing to social security number and card misuses are beyond the control or authority of SSA.

The Social Security Admin. (SSA) has issued more than 430 million Social Security numbers (SSN) & cards since the program began in 1935, of which an estimated 300 million belong to living number holders. SSNs have a key role in verifying individuals' authorization to work in the U.S., but SSN cards are also vulnerable to theft & counterfeiting. Concerns about unauthorized workers & the use of counterfeit documents led to this report which: (1) reviews SSA's progress to safeguard the SSN & enhance the card as required under the Intelligence Act; (2) identify key issues to be considered before enhancing the card; & (3) outline the range of options available to SSA for enhancing the card. Includes recommendations. Charts & tables.

[Social Security Administration](#)  
The United States Social Security Administration (SSA) administers two disability programs: Social Security Disability Insurance (SSDI), for disabled individuals, and their dependent family members, who have worked and contributed to the Social Security trust funds, and Supplemental Security Income (SSSI), which is a means-tested program based on income and financial assets for adults aged 65 years or older and disabled adults and children. Both programs require that claimants have a disability and meet

specific medical criteria in order to qualify for benefits. SSA establishes the presence of a medically-determined impairment in individuals with mental disorders other than intellectual disability through the use of standard diagnostic criteria, which include symptoms and signs. These impairments are established largely on reports of signs and symptoms of impairment and functional limitation. Psychological Testing in the Service of Disability Determination considers the use of psychological tests in evaluating disability claims submitted to the SSA. This report critically reviews selected psychological tests, including symptom validity tests, that could contribute to SSA disability determinations. The report discusses the possible uses of such tests and their contribution to disability determinations. Psychological Testing in the Service of Disability Determination discusses testing norms, qualifications for administration of tests, administration of tests, and reporting results. The recommendations of this report will help SSA improve the consistency and accuracy of disability determination in certain cases.

Social Security Administration Electronic Service Provision examines the Social Security Administration's (SSA's) proposed e-government strategy and provides advice on how the SSA can best deliver services to its constituencies in the future. The assessment by the Committee on the Social Security Administration's E-Government Strategy and Planning for the Future was based on (1) its examination of the SSA's current e-government strategy, including technological assumptions, performance measures and targets, planned operational capabilities, strategic requirements, and future goals; (2) its consideration of strategies, assumptions, and technical and operational requirements in comparable public- and private-sector institutions; and (3) its consideration of the larger organizational, societal, and technological context in which the SSA operates.
