You and your passport

Lynne Rienner Publishers

According to agency officials and guidance posted on State's public website, applicants can

apply for a U.S. passport in one of three ways: in person at an acceptance facility, by mail (for renewal applications), or at a passport facility that offers acceptance services (typically expedited applications). Applicants submit documents, such as a birth certificate or driver's license, to passport acceptance agents to provide evidence of citizenship, or noncitizen nationality, and proof of identity. The acceptance agents are to

watch the applicant sign the application, review submitted documents for completeness, and check for application inconsistencies. For example, acceptance agents are to assess whether photographs and descriptions in the identification documents match the applicant.

The passport is one of the most widespread documents

in worldwide use and yet, then, embodied in it from the beginning. But the passport is paradoxically, it has no basis in law: one state cannot demand another to do something - give access - simply by issuing a document. Yet, by insisting on the requirement of holding a passport the state has provided itself with a neat self-financing, data collection and surveillance system. This well illustrated book tells, for the first time, the story of the passport, from earliest times to the present day. only do so with the authority of the king or emperor. The passport's power to facilitate passage was, also connected with territorial and population control by the State. Today, the machine readable passport enables swift checks against lists of names, enabling customs control to sift out undesirables, and the question of identity cards (used throughout continental Europe) is again an issue in British politics. and revealing the mechanism of the passport system, including the secrets of the machine-readable passport, as well as looking at special diplomatic and royal passports, this book provides an accessible and engaging history of this most widespread of documents

Welcome to the United States DIANE Publishing

The passport is a document familiar to all, used and recognized worldwide. Yet, how does a passport actually work, and what happens when it doesn't? When was the first passport issued? How can a forged passport be detected, and how did a passport link Lord Palmerston to the attempted assassination of Napoleon

III? In this book, Martin Lloyd uses his in-depth experience with H.M. Immigration Service to explore the problems, humour, crime and politics which constitute the history of the passport. The idea of the passport is not new. The Ancient Egyptians were known to have a passport system while, in Roman times, persons travelling on official business were issued with a Tractorium (a letter) in the name of the emperor. Yet contrary to the popular idea, passports were often used to

prevent not facilitate travel. William the Conqueror allowed no one to enter or leave England without his permission while Henry I and Elizabeth I refused to grant passports to, respectively, the legate from the Pope and Mary, Queen of Scots. Passports have also enabled murder to take place and saved the lives of many Jews in the Second World War. However, their ultimate role appears to be that of control. When machine-readable passports provide the state with more information on the

movement of citizens than at any time in history, many are beginning to ask whether the age of Big Brother has not already arrived. The Passport offers a unique perspective on the intriguing history of this document. Martin Lloyd draws on many years of research, and includes illustrations from his own collection, to create the first book on this subject. **Passport to Your National Parks - Collector's Edition**

In today's world of constant identification checks, it's difficult to recall that there was ever a time when "proof of identity" was not a part of everyday life. And as anyone knows who has ever lost a passport,

or let one expire on the eve of international travel, the passport has become an indispensable document. But how and why did this form of identification take on such a crucial role? In the first history of the passport in the United States, Craig Robertson offers an illuminating account of how this document, above all others, came to be considered a reliable answer to the question: who are you? Historically, the passport originated as

an official letter of introduction addressed to foreign governments on behalf of American travelers, but as Robertson shows, it became entangled in contemporary negotiations over citizenship and other forms of identity documentation. Prior to World War I, passports were not required to cross American borders, and while some people struggled to understand how a passport could accurately identify a person, others took advantage of this new	document to advance claims for citizenship. From the strategic use of passport applications by freed slaves and a campaign to allow married women to get passports in their maiden names, to the "passport nuisance" of the 1920s and the contested addition of photographs and other identification technologies on the passport, Robertson sheds new light on issues of individual and national identity in modern U.S. history. In this age of	heightened security, especially at international borders, Robertson's <i>The Passport in America</i> provides anyone interested in questions of identification and surveillance with a richly detailed, and often surprising, history of this uniquely important document. <u>Department of State Publication</u> Sutton Pub Limited Dreaming about living and working in Japan but not sure how to

Report to the Secretary of State

The "explosive" (The New York Times) bestseller—now with a new introduction by the author When Hitler's Pope, the shocking story of Pope Pius XII that "redefined the

history of the twentieth century" (The Washington Post) was originally published, it sparked a firestorm of controversy both inside and outside the Catholic Church. Now, award-winning journalist John Cornwell has revisited this seminal work of history with a new introduction that both answers his critics and reaffirms his overall thesis

that Pius XII, now scheduled to be canonized by the Vatican, weakened the Catholic Church with his endorsement of Hitler—and sealed the fate of the Jews in Europe.

The Passport in America

For frequent flyers and armchair travelers alike, this pocket-sized guide to the passports of the world is as informative as it is fun to peruse. This

highly entertaining, fact-filled book reproduces the passport covers of every single country that issues its own travel document. It clearly illustrates how varied passports can be, despite the guidelines established by the International Civil Aviation Organization. Arranged by continent, each country's entry includes a full-color	reproduction of its passport cover as well as brief information, including its location on the world map, flag, population, population density, political status, GDP and per capita income, official languages, and visa index. In an increasingly globalized world in which a passport has become one of the most important	credentials we possess, this compendium conveys the symbolic power of these documents, and the fascinating stories behind their designs and development. <u>The History of a Document</u> GAO reviewed the Department of State's Office of Passport Services, the Travel Document Issuance System (TDIS), the Passport Files Miniaturization (PFM) system, passport

records storage, passport fraud programs, special handling fees, and the Passport Lookout System. The objective of the review was to evaluate the effectiveness of these functions within the Department. TDIS, the Department's new computerized system for issuing passports, is plagued by deficient planning. TDIS will cost between \$12 to \$15 million over the next 4 years, and management needs to take on more comprehensive planning.	The PFM system is another problem area that has presented difficulties to the passport management staff. Because of technical complications within the system, operational performance troubles, and inadequate management attention to the new file system, a severe backlog of work has developed, clogging the system with over 2 million passport applications. Still another related records management problem is the storage of original	passport records. Costing over \$200,000 each year, the Department has over 140 million passport documents in storage. One of the most severe problems facing the Department is that of passport fraud. Although the Department discovered 1,002 cases of passport fraud in fiscal year 1980, it has been presumed that this is just the tip of the iceberg. GAO identified two operational areas of concern that are performed as daily

GAO believes that the system is basically sound but is
