While Africa is made up of several different countries which might be different from each other in many ways, these countries within the African continent have some commonalities such as region, some shared history, resources, and some shared policies through organizations such as the African Union, African Free trade Zone, and ECOWAS. With a population of over a billion, the African continent has become an attractive market for various businesses. Several publications in recent years have pushed for the advancement of the African continent toward increased manufacturing as a road to development. This inevitably includes the plastics and other polymers industry. The founder and president of PETA, Ingrid Newkirk, and bestselling author Gene Stone explore the wonders of animal life with “ admiration and empathy ” (The New York Times Book Review) and offer tools for living more kindly toward them. In the last few decades, a wealth of new information has emerged about who animals are: astounding beings with intelligence, emotions, intricate communications networks, and myriad abilities. In Animalkind, Ingrid Newkirk and Gene Stone present these findings in a concise and awe-inspiring way, detailing a range of surprising discoveries, like that geese fall in love and stay with a partner for life, that fish “ sing ”

underwater, and that elephants use their trunks to send subsonic signals, alerting other herds to danger miles away. Newkirk and Stone pair their tour through the astounding lives of animals with a guide to the exciting new tools that allow humans to avoid using or abusing animals as we once did. Whether it ' s medicine, product testing, entertainment, clothing, or food, there are now better options to all the uses animals once served in human life. We can substitute warmer, lighter faux fleece for wool, choose vegan versions of everything from shrimp to marshmallows, reap the benefits of animal-free medical research, and scrap captive orca exhibits and elephant rides for virtual reality and animatronics. Animalkind provides a fascinating look at why our fellow living beings deserve our respect, and lays out the steps everyone can take to put this new understanding into action.

A big, inside look at the shocking lack of regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs ' lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is big business: \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all brands. This comes as a surprise to most people, but what ' s even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, “ legal ” ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don ' t know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the junk that ' s in kibble or cans, you have taken the first steps to improving your dog ' s health, behavior and happiness. You know the unsavory side of Big Tobacco and Big Pharma. Now Shawn Buckley, Dr. Oscar Chavez, and Wendy Paris explain all you need to know about unsavory Big Kibble—and offer a brighter path forward for you and your pet.
