The Bobath concept is an approach to neurological rehabilitation that is applied in patient assessment and treatment. The goal of applying the Bobath concept is to promote motor learning for efficient motor control in various environments, thereby improving participation and function. This is done through specific patient handling skills to guide patients through initiation and completion of intended tasks. This approach to neurological rehabilitation is multidisciplinary, primarily involving ph
Neuro-Developmental Treatment Association > What is NDT
The Bobath Concept is also known as neurodevelopmental treatment; for the present study, Bobath and neurodevelopmental treatment were seen as synonyms for the same approach. Other synonyms (eg, conventional therapy) were accepted only when the therapy was based on the Bobath Concept (or neurodevelopmental treatment).

Is there a difference between Bobath and NDT? |cbiaorg.com
Bobath therapy is as individual as each child, so the first thing we do is spend time getting to know you. We ask lots of questions, listen to your concerns and find out what you and your child want to achieve. We then look closely at your child's movement. Not just if they move, but the quality of movement based on our experience.
