A practical guide to using Interpretative Phenomenological ...

Interpretive Phenomenological Analysis Interpretive Phenomenological Analysis (also known as IPA) is a qualitative research design which aims to provide a thorough examination of lived experience. According to Smith and Osborn (2015), IPA “produces an account of lived experience in its own terms rather than one prescribed by pre-existing theoretical preconceptions” (para 1).

Interpretative phenomenological analysis (IPA) is a qualitative approach which aims to provide detailed examinations of personal lived experience. It produces an account of lived experience in its own terms rather than one prescribed by pre-existing theoretical preconceptions and it recognises that this is an interpretative endeavour as humans are sense-making organisms.

Interpretative Phenomenological Analysis

Interpretative phenomenological analysis (IPA) is an approach to psychological qualitative research with an idiographic focus, which means that it aims to offer insights into how a given person, in a given context, makes sense of a given phenomenon.

Usually these phenomena relate to experiences of some personal significance, such as a major life event, or the development of an important relationship.
