This book brings together contributions on learner autonomy from a myriad of contexts to advance our understanding of what autonomous language learning looks like with digital tools, and how this understanding is shaped by and can shape different socio-institutional, curricular, and instructional support. To this end, the individual contributions in the book highlight practice-oriented, empirically-based research on technology-mediated learner autonomy and its pedagogical implications. They address how technology can support learner autonomy as process by leveraging the affordances available in social media, virtual exchange, self-access, or learning in the wild (Hutchins, 1995). The rapid evolution and adoption of technology in all aspects of our lives has pushed issues related to learner and teacher autonomy centre stage in the language education landscape. This book tackles emergent challenges from different perspectives and diverse learning ecologies with a focus on social and educational (in)equality. Specifically, to this effect, the chapters consider digital affordances of virtual exchange, gaming, and apps in technology-mediated language learning and teaching ranging from instructed and semi-instructed to self-instructed contexts. The volume foregrounds the concepts of critical digital literacy and social justice in relation to language learner and teacher autonomy and illustrates how this approach may contribute to institutional objectives for equality, diversity and inclusion in higher education around the world and will be useful for researchers and teachers alike.

Reckless Open to Hope

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. *Families Caring for an Aging America* examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.
