This book addresses one of the most crucial and common questions confronting planners of languages other than English, that is, how the impacts of global languages on local languages should be dealt with:

internationalization or local language promotion? This empirical study examines the implementation of Iran's governmental language and terminology policy to accelerate rarely used abbreviation methods in Persian in order to preserve the language from the extensiveness of borrowed English abbreviated forms. This book provides an in-depth analysis of relevant linguistic theories as well as the structure and social context of the Persian language itself, rather than relying on personal opinions or beliefs either in favour of or against abbreviation. The text appeals to politicians, language planners, terminologists, lecturers, authors and translators of scientific works, especially those who are speakers of languages other than English and seek to promote their local

languages. This book is particularly relevant to linguistics students (both undergraduate and graduate students) and language teachers and researchers in the broader areas of language education and curriculum design.

This book teaches the fundamentals of CNC machining. Topics include safety, CNC tools, cutting speeds and feeds, coordinate systems, G-codes, 2D, 3D and Turning toolpaths and CNC setups and operation. Emphasis is on using best practices as related to modern CNC and CAD/CAM. This book is particularly well-suited to persons using CNC that do not have a traditional machining background.

This textbook covers the fundamentals of fouling and scaling in reverse osmosis

systems. It includes theory and practice of pre-treatment, fouling and scaling in reverse osmosis applied for drinking and industrial water production. The impact of the water source – seawater, river water, brackish groundwater and (treated domestic) waste water – will be discussed in depth. The book presents the knowledge and experience gained at IHE Delft over the last 25 years during the implementation of the master programme in Water Supply Engineering and during the implementation of state-of-the-art research in understanding and solving operational problems in full scale desalination plants. It presents the expert knowledge of IHE Delft in the areas of pre-treatment for reverse osmosis systems, assessment of water quality with respect to fouling potential, development of methods for quality assessment, modified fouling index ultrafiltration at constant flux, transparent exopolymer particles, antiscalant

dose optimization, biological growth potential), algal blooms, scaling control. The book will be used in the annual master programme at IHE Delft and it will be of interest for students, academics, engineers and managers in drinking water facilities all over the world.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative

fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field

provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Sensors and Transducers Adlard Coles Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains

how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Analyzing the Music of Living Composers (and Others) is a collection of essays that grew out of the 2010 annual meeting of the West Coast Conference of Music Theory and Analysis. The stated purpose was to apply traditional music-analytic techniques, as well as new, innovative techniques, to describing the music of composers of the late 20th and early 21st centuries. The goal was to take steps toward making the music of our time a bit less impenetrable for our colleagues, students and other listeners by showing how it follows, varies, and sometimes controverts the organizational schemes of older music. This collection includes chapters analyzing music of older

eras as well, including a number that throw light on the analysis of recent music in unexpected ways, and there are also several chapters that propose innovative analytic approaches to recent popular music and jazz.

This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four-stroke marine engines, gas and gas–diesel engines and low-speed two-stroke crosshead engines, describing their application areas and providing readers with a useful snapshot of their technical features, e.g. their dimensions, weights, cylinder arrangements, cylinder

capabilities, rotation speeds, and exhaust gas temperatures. For each marine engine, information is provided on the manufacturer, historical background, development and technical characteristics of the manufacturer's most popular models, and detailed drawings of the engine, depicting its main design features. This book offers a unique, self-contained reference guide for engineers and professionals involved in shipbuilding. At the same time, it is intended to support students at maritime academies and university students in naval architecture/marine engineering with their design projects at both master and graduate levels, thus filling an important gap in the literature.

His head tilted, looking down at me. His eyes found my bare ass, submissively up in the air. A growl rumbled from him as he fell onto me... Don't you dare dismiss me as another gay college dude with a drug problem. That's all true, but it's not all I am. I didn't have it hard growing up, but I made some bad decisions. Those lead to more bad decisions, and one day I get a phone call that makes everything

else seem insignificant. My Dad had died, and I had no way to cope with that. So I fled to the secluded family cabin in the woods, where I hoped to find some kind of closure. Instead I found two handsome trespassers, and I thought the weekend might take a more interesting turn. Some crazy shit went down, and I found myself treating one of the trespassers for gunshot wounds, but somehow his wounds had healed. He opened his eyes, golden and terrifying. He growled, smelling his submissive prey. I had no chance. For adults only, contains graphic sexual content!
