If handbooks can be inspiring, this is it! Like a true companion, it takes in its stride conversations both big and small. Its entries do not just present an international and multidisciplinary mix, but true to life they work on several different scales. And, importantly, the book makes its authority evident. For it is like an extended website, but with all the added advantages of an encyclopaedia that actually tells you about the authors and the sources on which they have drawn. The resulting compilation is highly intelligent, thoughtful and above all usable. Dame Marilyn Strathern, University of Cambridge, UK
[The Elgar Companion to Development Studies](#) is a major production in the development studies field, authored by a star-studded cast of contributors. With 136 entries covering a vast range of topics, it should quickly establish itself as a leading work of reference. We should all feel indebted to David Clark, who has successfully brought this substantial publishing project to completion. John Toye, University of Oxford, UK
This is a most comprehensive handbook on development studies. It brings together a wide, varied array of carefully crafted summaries of 136 key topics in development by an international cast of well-respected academics and other experts in respective areas of study. The handbook is heavily interdisciplinary, organically combining economic, political, historical, social, cultural, institutional, ethical, and human aspects of development. While the wide range of entries might appear as a simple glossary listing or an encyclopedic collection, each of the 136 entries offers more depth and discussion than the average handbook. ... Viewed in this light, this companion is highly likely to become known as a leading reference work on the topic. Highly recommended. Ismael Hossein-Zadeh, Choice
[The Elgar Companion to Development Studies](#) is an innovative and unique reference book that includes original contributions covering development economics as well as development studies broadly defined. This major new Companion brings together an international panel of experts from varying backgrounds who discuss theoretical, ethical and practical issues relating to economic, social, cultural, institutional, political and human aspects of development in poor countries. It also includes a selection of intellectual biographies of leading development thinkers. While the Companion is organised along the lines of an encyclopaedia, each of its 136 entries provide more depth and discussion than the average reference book. Its entries are also extremely diverse: they draw on different social science disciplines, incorporate various mixes of theoretical and applied work, embrace a variety of methodologies and represent different views of the world. The Elgar Companion to Development Studies will therefore appeal to students, scholars, researchers, policymakers and practitioners in the filed of development as well as the interested layman.

First published in 1986, [Social Science and Social Policy](#) addresses major questions concerned with the social utility of social science. The book is divided into four parts. The first part considers the place of social science in the policy-making process and criticizes the rational model which gives a central place to analysis. In part two, five different methodologies for policy research are considered: the use of continuous surveys, public opinion polls, social indicators, evaluation research and social experimentations and the use of qualitative methods. The advantages and drawbacks of each are considered with extensive use of examples. In the third part, the role of theory is examined. Particular attention is paid to the issue of health inequality. In part four, general questions are raised about the use and abuse of social science, including questions about how it can be most effectively disseminated to make maximum impact. The book is aimed at a general readership and requires no special methodological expertise. It will appeal particularly to undergraduates and graduate students taking courses in social policy, public policy applied sociology and a range of applied social sciences such as criminology, health studies, education and social work.

Melchizedek is a mysterious figure to many people. Adopting discourse analysis and text-

linguistic approaches, Chan attempts to tackle the Melchizedek texts in Genesis 14, Psalm 110, and Hebrews 5-7. This seminal study illustrates how the mysterious figure is understood and interpreted by later biblical writers, "... Using the “blessing” motif as a framework, Chan also argues that Numbers 22-24, 2 Samuel 7 and the Psalter: Books I-V (especially Psalms 1-2) provide a reading paradigm of interpreting Psalm 110. In addition, the structure of Hebrews provides a clue to how the author interprets the Old Testament texts.

The field of business history has changed and grown dramatically over the last few years. There is less interest in the traditional 'company-centred' approach and more concern about the wider business context. With the growth of multi-national corporations in the 1980s, international and inter-firm comparisons have gained in importance. In addition, there has been a move towards improving links with mainstream economic, financial and social history through techniques and outlook. The International Bibliography of Business History brings all of the strands together and provides the user with a comprehensive guide to the literature in the field. The Bibliography is a unique volume which covers the depth and breadth of research in business history. This exhaustive volume has been compiled by a team of subject specialists from around the world under the editorship of three prestigious business historians.

The purpose of this research is to identify the categories of South Korean elementary teachers ’ knowledge for teaching mathematics. Emerging from the data collected and the subsequent analysis are five categories of South Korean elementary teachers ’ knowledge for teaching mathematics: Mathematics Curriculum Knowledge, Mathematics Learner Knowledge, Fundamental Mathematics Conceptual Knowledge, Mathematics Pedagogical Content Knowledge, and Mathematics Pedagogical Procedural Knowledge. The first three categories of knowledge play a significant role in mathematics instruction as an integrated form within Mathematics Pedagogical Content Knowledge. This study also demonstrated that Mathematics Pedagogical Procedural Knowledge might play a pivotal role in constructing Mathematics Pedagogical Content Knowledge. These findings are connected to results from relevant studies in terms of the significant role of teachers ’ knowledge in mathematics instruction.

This book deals with the water policy and management in Canada. It discusses various problems and risks in the fresh and drinking water supply in the second largest country in the world. Mohammed Dore argues that water is underpriced and used wastefully in Canada. In selected case studies, he illustrates the major threats from human activity to Canadian freshwaters and drinking water resources, including manufacturing, mining, oil sands production, animal farming and agricultural use. Selected case studies include reviews of even dramatic incidences, e.g. the Walkerton tragedy of 2000, when 7 people were killed and 200 went onto permanent dialysis treatment because of water contamination with harmful pathogens. The book warns that wastewater treatment standards are often not sufficient, so that many drinking water resources are in peril of wastewater contamination. As most of the water resources are provincial responsibility, the book discusses the water management policies in the different provinces separately. Through a detailed discussion and statistical analyses, it can define water policy and management lessons that emerge from the investigated case studies. It ends by contrasting water policy and practice in Canada with the practice in some European countries.

'Stella Ladi has taken on a daunting set of challenges: a comparative study of policy transfer; a study of the role of think tanks in the transfer process; and the relevance of Europeanisation to shaping the transfer process. As such, this is an innovative book tackling increasingly important issues that cut across the fields of public policy and international relations. It deserves to be widely read as the first systematic study of its kind - and others will surely follow.' - Kevin Featherstone, European Institute, London School of Economics and Political Science, UK
'Policy transfer is on the increase, fuelled by the dual processes of globalisation and Europeanisation. Stella Ladi provides an incisive and detailed account of how policy transfer is shaping policy developments in Europe within a rich theoretical context.' - Diane Stone, Central European University, Hungary
This significant new book presents a comparative study of the role of policy research institutes within policy transfer, and the subsequent impact policy transfer has upon the processes of Europeanisation and globalisation.

[Designing and Conducting Mixed Methods Research](#) Routledge
Focusing on the formation of the Korean economic system, this book presents a fascinating and comprehensive analysis of economic development outside of the traditional neo-classical, developmental-state and dependency perspectives. It examines in detail the evolution of institutions that contributed to economic growth and the formation and the workings of the economic system. With an emphasis on the interaction between government, private institutions (Chaebol and financial institutions) and the influence of Japan, it offers one of the most stimulating and distinctive views of Korean economic development to date. It will be of key interest to scholars and researchers of financial growth and development, Asian finance, and regional and heterodox economics.

'Strong social policy is essential for sustainable growth. This book is an extremely useful overview of social policy issue for policy makers and anyone who wants to understand the true roots of successful sustainable development' - Ian Johnson, Vice President for Sustainable Development, The World Bank
'Throughout the world issues of social development have now taken centre stage. There is no more comprehensive and readable guide to the choices and conflicts of this global drama. This book is essential reading for all students and practitioners of social development - and for every World Bank economist' - David Piachaud, Professor of Social Policy, London School of Economics
This much-needed textbook fulfils a major gap in providing a complete up-to-date guide and introduction to the increasingly important role of social policy in the context of development processes and practice. Across a number of key sectors and areas of social policy concern, the authors accessibly introduce and explain the main conceptual debates, the most recent policy discussions, and provide applied examples to illustrate the latest developments in the social policy and planning field. Central topics covered include: - poverty - rural development - urban development - education - health - social work - social welfare - international development and cooperation. [Social Policy for Development](#) is an essential text for all students and practitioners alike seeking a deeper understanding of the issues of poverty, social exclusion and deprivation across social policy and development studies internationally.

[Architectural technology](#) is the realisation of architecturethrough the application of building science, forming theconstructive link between the abstract and the physical. [Architectural Technology: research and practice](#) demonstratesthe importance of research in architectural technology and aims tostimulate further research and debate by enlightening, informingand challenging readers. Chapter authors address the interplay between research andpractice in the field of architectural technology,

examining the influence of political, economic, social, environmental and technological issues. The focus throughout is on creating sustainable buildings that are constructed economically and function effectively and efficiently within their service lifecycle. The book's mix of chapters and case studies bring together a number of different themes and provides invaluable insights into the world of research from the perspective of those working within the architectural technology field - practitioners, academics and students. The underlying message is that architectural technology is not just a profession; it is a way of thinking and a way of acting. This is highlighted by contributions from architects and architectural technologists passionate about architectural technology as a field of knowledge. Contributions range from the theoretical and polemic to the pragmatic and applied, further helping to demonstrate the richness of the field. About the Editor Stephen Emmitt is Professor of Architectural Technology at Loughborough University UK and Visiting Professor of Innovation Sciences at Halmstad University, Sweden and a member of CIAT's Research Group.

This book restores water, both fresh and salt, to its central position in human endeavour, ecology and environment. Water access and the environmental and social problems of development are major issues of concern in this century. Drawing on water's many formations in debating human relationship with a major source of life and a major factor in contemporary politics, this book covers oceans and rivers to lagoons, billabongs and estuaries in Asia, Oceania and the West Pacific. In an interdisciplinary and cross-disciplinary analysis of the water problem, the contributors address the physical descriptors of water and water flow, and they interrogate the politicised administrations of water in closely corresponding regions. Water, Sovereignty and Borders in Asia and Oceania identifies new discursive possibilities for thinking about water in theory and in practice. It presents those discourses that seem most useful in addressing the multiple crises the region is facing and thus should be of interest to scholars of Asian Studies, Geography, Environmental and Cultural Studies.

This book offers a systematic linguistic critique of language development studies since the 1960s. It uses systemic theory to explain and interpret the development of child language, with discussions and illustrative texts to explicate the analysis. Painter provides a rich source of data for child language researchers in all fields, and aims to make a systematic theory more accessible to those interested in the ideas put forward by M.A.K. Halliday in his writings on language development.

The ideas that mark modern-day pragmatics are old, but did not start to get more systematically developed until the 1960s and 1970s. Still, the very recognition of pragmatics as a self-standing academic discipline is a product of the 1980s, not least made possible by the establishment of the International Pragmatics Association. One scholar in particular has devoted his life both to IPrA and to the discipline. This volume pays homage to Jef Verschueren on the occasion of his 60th birthday. It celebrates him for his long-standing dedication as Secretary General of IPrA and for his scholarly contributions to the field. We owe to Jef Verschueren the insight that the processes through which language users (do or do not) achieve understanding among each other in communication can only be fully comprehended if approached from a pragmatic perspective, i.e. if understanding is pragmaticized. The chapters in this book are written by scholars who, like Jef Verschueren, have played a key role in the genesis and development of the field, and who still actively contribute to its advancement today. Each author looks back, evaluates the present, and takes on new challenges.

Among a vast literature on the Asian economies, the book proposes a distinctive approach, inspired by Regulation Theory, in order to understand the current transformations of the Asian economies. The book follows their transformations after the 1997 Asian crisis until the subprime crisis. During this period, the viability of their growth regime was to coherence of five basic institutional forms: the degree of competition and insertion into the world economy, the nature of labour market organization, the monetary and exchange rate regimes and finally the style for State intervention via legislation, public spending and tax. The book provides new findings. The degree of financial liberalization and opening to the world economy largely determines the severity of the 2008-2009 recession and the political-economic reactions of each Asian countries to the subprime crisis. Asian capitalisms are distinct from American and European ones, but they are quite diverse among themselves, and this differentiation has been widening during the last decade. This book will help to shed light on a de facto regional economic integration is taking place in Asia, but unsolved past political conflicts do hinder the institutionalisation of these interdependencies.
