Medication Errors Lippincott Williams & Wilkins

Classroom tested and reviewed, the second Canadian edition draws upon the strengths of a successful first Canadian edition and eight US editions that have together helped over 600,000 faculty and students allay math anxiety and more confidently perform accurate calculations. This text is directed at the student or professional who feels uncomfortable with mathematics and wants to improve their ability to perform accurate drug dosage calculations. As a pioneer Canadian text in the topic of medication calculations, the authors have transcended provincial practices to provide a nation-wide perspective on dosage calculations. The International System (SI) of units is used almost exclusively and medication dosages and drug labels have been vetted with the current Canadian drug data base, so that you, as a beginning professional, will be able to recognize and interpret drug labels and dosages. The importance of avoiding medication

errors is also highlighted by the incorporation of applied critical thinking skills, to prepare you for real-life nursing practice situations. This winning combination of Canadian labels, life-size photos and an easy-to-follow three-Step approach to Dosage Calculations, makes this text a must-have for all Canadian nursing students.

Pathways to Health Equity Delmar Pub

Being mistaken for someone else, being falsely depicted as an important international heroin importer and trafficker, and being made an unwilling accessory to murder aren't everyday occurrences. Surely this is not how the police behave to get their man? But...what if they go further? What if, with the aid of a thuggish civil agent, the RCMP implement a buy and bust operation, a Final Solution to get rid of you? And what if a Mountie is killed in the process under very nebulous circumstances? A chilling scenario that becomes even more disconcerting when members of the RCMP commit perjury to insure your conviction and cover up the true circumstances surrounding their colleague's death. But, what about you being sentenced to death as a result of this and a trial littered with lying witnesses and tainted evidence that sends you on a path meant to shatter your already broken life? And...what if, in the end, Canadian legal institutions and ministries opt to defend the undefendable in order to protect the RCMP's integrity and the image of Canada? Known as Bang Kwang prison inmate 482/33, my name is Alain Olivier. I learned first-hand what it means to be treated as expendable when the RCMP screws things up during a sketchy buy & bust operation oversea. This was my struggle against all odds to survive in the jungle of Bang Kwang prison, a true story that has something for everyone--drugs, murder, threats, violence, conflict of interest, political corruption, coverups, and my faint hope that the Canadian government would come to its senses and bring me home.

Designing and Conducting Health Surveys

Elsevier

Designing and Conducting Health Surveys is written for students, teachers, researchers, and anyone who conducts health surveys. This third edition of the standard reference in the field draws heavily on the most recent methodological research on survey design and the rich storehouse of insights and implications provided by cognitive research on question and questionnaire design in particular. This important resource presents a total survey error framework that is a useful compass for charting the dangerous waters between systematic and random errors that inevitably accompany the survey design enterprise. In addition, three new studies based on national, international, and state and local surveys—the UNICEF Multiple Indicator Cluster Surveys, California Health Interview Survey, and National Dental Malpractice Survey—are detailed that illustrate the range of design alternatives available at each stage of developing a survey and provide a sound basis for choosing among them.

THEY KILL WITHOUT CONSCIENCE. ANN RULE PORTRAYS THEIR SHATTERING CRIMES WITHOUT PITY. In eight stunning Case Files volumes, from *A Rose for Her Grave* to the #1 blockbuster *Last Dance*, *Last Chance*, Ann Rule reigns as "America's best true-crime writer" (Kirkus Reviews). Now, she updates the most astonishing cases from that acclaimed series -- and presents shocking, all-new true-crime accounts -- in one riveting anthology. In every explosive chapter of *Without Pity*, Ann Rule deepens her unrelenting exploration of the evil that lies behind the perfect facades of heartless killers...and the deadly compulsions of greed and power that shatter their outward trappings of material success. They are the admired, trusted neighbor; the affable family man; the sexy, charismatic lover; the high-achieving professional. Perhaps most frightening of all is that they are heroes in their own minds. But when someone gets in the way of their deluded dreams, they are capable of deadly acts of violence with no remorse. Analyzing the true nature of the sociopathic mind in chilling detail, Ann Rule traces the murderous crimes of seemingly ordinary men -- killers who drew their unsuspecting victims into their twisted worlds with devastating consequences.

Math for Nurses Lippincott Williams & Wilkins

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and

choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.
