Joanne Schwartzberg, MD Director Aging and Community Health, American Medical Association's Older Drivers Project "This helpful book, printed in LARGE TYPE, contains facts, information, advice and reference materials that will enable those facing deterioration in their vision to make informed decisions about their ability to continue driving." Visionlink Newsletter of International Library Archives & Museum of Optometry "Driving with Confidence fills a large gap in the low vision literature and provides a clearly written discussion of viable options and alternatives for driving with low vision ... because countries outside the US are also dealing with these same issues regarding drivers with low vision and the use of optical enhancement devices, I believe the material contained in Peli and Peli would be of strong interest internationally." Visual Impairment Research "The book is clearly written and well structured ... it will inform and empower its intended audience." CE Optometry "I will be enthusiastically recommending this book to my more astute patients (and their families) if they have a reasonable chance of being able to drive safely and legally and are trying to gain greater perspective than I can offer in a clinic visit. I will also recommend this book as a reference for any eye doctors, rehabilitation specialists, and driving instructors who work with a lot of partially sighted patients." Optometry and Vision Science "I strongly support the Peli's main advocacy theme, which is that visually impaired individuals should be afforded more opportunities to demonstrate their potential for safe driving ... I recommend this book to eye care practitioners as a useful source of information, and a resource to share with their visually-impaired patients." "Physical diagnosis has been taught to every medical student but this evidence-based approach now shows us why, presenting one of medicine's most basic tenets in a new and challenging light. The format is extraordinary, taking previously published material and updating the pertinent evidence since the initial publication, affirming or questioning or refining the conclusions drawn from the data. The authors have uncovered the truth.
