The International Financial Reporting Standards are quite different from other sets of accounting standards, and are fundamentally different from US-GAAP, in that they are based on principles, and not on detailed rules. Financial Reporting under IFRS: A topic-based approach offers a global perspective on IFRS by presenting the prescribed rationale and principles and illustrating them through numerous examples from large international companies. It aims to develop the fundamental skills necessary to read and use the information contained in all types of financial statements, through examples, activities, questions and answers. The book is broadly divided into three sections. Section one examines the structure of the Balance Sheet and the Income Statement, their links and the accounting mechanisms used to prepare them. Section two deals with the identification, evaluation and reporting of Balance Sheet items. Section three covers the use of financial statements to analyze a firm's performance and its risks. Throughout the book special topics are covered, including Derivatives and Hedge accounting (IAS 39), Business Combination (IFRS 3) and Operating Segments (IFRS 8). Financial Reporting under IFRS is ideally suited to the needs of students of accounting and financial reporting, but all users of financial statements, from creditors and investors to suppliers, customers, employees and governments will benefit from its concise, topic-based approach.

This title is one of six releases from the LexisNexis Graduate Tax Series. United States

International Taxation embodies the dual goals established for the LexisNexis Graduate Tax Series: to provide graduate tax students with a solid foundation in the applicable rules and to enhance their skills in reading and applying complex statutes and regulations. To this end, the text relies very little on the often-times laborious analysis of cases and other sources that are secondary to the Code and the regulations. Instead, each chapter provides an overview of the substantive content, with emphasis on important issues that are not apparent from the language of the Code and regulations. This book contains teaching materials for law school courses in the United States federal income taxation of persons engaged in cross-border activities and transactions. It contains 21 separate Units that address fundamental concepts of residency and source, the taxation of United States persons (citizens, residents, and domestic corporations) on their activities within the United States, and the safeguard rules in place to curtail potentially abusive tax avoidance in the international context.

However, not much has been written about the dramatic changes that have to be made to the accounting and financial system of a transition economy. Accounting and Financial System Reform in a Transition Economy: A Case Study of Russia was written to help fill that gap.
