In 2013 the Institute of Medicine (IOM) Roundtable on Population Health Improvement organized a workshop to discuss opportunities to foster a health in all policies approach in non-health sectors such as housing, transportation, defense, education, and others. Much of the discussion focused on public-sector organizations, and roundtable members saw the need for further discussion of the role of the private sector, both as stakeholder and partner. On June 4, 2015, the roundtable convened a follow-up workshop focused on applying a health lens to the role and potential of businesses in improving economic well-being and community health outcomes. Participants explored what businesses can offer the movement to improve population health and areas of potential, as well as models for how businesses can impact the determinants of health, and developed a platform for discussing how to promote and support health in all business practices, policies, and investments. This report summarizes the presentations and discussions from the workshop.

Total Operations Solutions builds on concepts that were introduced in "Total Manufacturing Solutions", Basu and Wright (1997). It demonstrates how this holistic approach of operational excellence driven by a self-assessment methodology can be applied equally to manufacturing, service or public sectors. The text covers an implementation programme to demonstrate how to put the methodology into practice. a differentiating feature of the approach will be a critical update, impact analysis and comparison with new developments such as e-Business, outsourcing, Six Sigma, EFQM and ISO 9000:2000. It is a step-by-step guide for the application of the appropriate tools to the improvement process. Total Operations Solutions could be used as an essential handbook for all employees in a Six Sigma programme and provide a better understanding of basic tools and techniques to help them to support a quality improvement initiative and sustain a strong competitive position.

Over the last several years, manufacturers have expressed increasing interest in reducing their energy consumption and have begun to search for opportunities to reduce their energy usage. In this book, the authors explore a variety of opportunities to reduce the energy footprint of manufacturing. These opportunities cover the entire spatial scale of the manufacturing enterprise: from unit process-oriented approaches to enterprise-level strategies. Each chapter examines some aspect of this spatial scale, and discusses and describes the opportunities that exist at that level. Case studies demonstrate how the opportunity may be acted on with practical guidance on how to respond to these opportunities.

The chemicals manufacturing industry is a vibrant, global business that encompasses many important sectors: from commodity chemicals, to specialty chemicals to custom manufacturing. Key products include biochemicals, nanochemicals, polymers, petrochemicals, fertilizers, plastics, coatings, ceramics, solvents, additives, dyes and many other products basic to home and business needs. In addition, the pharmaceuticals industry is often included when discussing chemicals. Plunkett's Chemicals, Plastics & Coatings Industry Almanac 2008 covers such sectors, providing a market research tool for competitive intelligence, strategic planning, business analysis and even employment searches. Our coverage includes business trends analysis and industry statistics. The almanac also contains a chemicals, plastics and coatings business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 400 company profiles include complete business descriptions and up to 27 executives by name and title. A CD-ROM accompanies the book version and enables you to search, filter, view and export selected companies and organizations -- a handy tool for creating mailing lists.

This book examines green management practices among top-performing companies operating on the Chinese mainland. It begins with the question: what constitutes a "green" company? Is this definition different when we consider China's sustainability efforts? Taken into consideration are such aspects as green management vision, supplier management programs, resource usage and investment in the environment. Through in-depth interviews with sustainability leaders and top executives, this Green Management Book will reveal how to systematically create or improve existing green management strategies in China. It uses actual case studies from domestic and foreign companies to highlight these practices. Over 2 years of extensive research - working with the research board of the Fortune China CSR rankings and China-based CSR strategy platform InnoCSR - contribute to a comprehensive list of companies that are leading the way towards a greener China.

Much has changed in the Turkish economy since The Business Year's last publication on the country in 2016. Then, the economy was

experiencing a sustained period of high growth at a time when much of the rest of the world was still struggling to recover from the global recession. On our 2019 return to Turkey to produce this publication, the country was in the grip of a sharp drop in its currency's value and the onset of economic recession. Beleaguered by high interest rates and a decline in domestic consumer demand, companies canceled planned investments and corporate loans began souring. Despite this, the year ended optimistically, with the economy beating growth estimates, inflation reined in, and lower global and domestic interest rates providing a needed boost in investment activity. The Business Year's country-specific publications, sometimes featuring over 150 face-to-face interviews, are among the most comprehensive annual economic publications available internationally.

New buildings can be designed to be solar oriented, naturally heated and cooled, naturally lit and ventilated, and made with renewable, sustainable materials--no matter the location or climate. In this comprehensive overview of passive solar design, two of America's solar pioneers give homeowners, architects, designers, and builders the keys to successfully harnessing the sun and maximizing climate resources for heating, cooling, ventilation, and daylighting. Bainbridge and Haggard draw upon examples from their own experiences, as well as those of others, of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable, healthy, and secure place in which to live, laugh, dance, and be comfortable. Even if the power goes off. Passive Solar Architecture also discusses "greener" and more-sustainable building materials and how to use them, and explores the historical roots of green design that have made possible buildings that produce more energy and other resources than they use.

There are few industry sectors in the world today with more potential than renewable and hydrogen energy. Clean, green and renewable energy technologies are receiving immense emphasis from investors, environmentalists, governments and major corporations. Today's high prices for crude oil, coal and natural gas will increase the demand for renewables of all types. A wide variety of technologies are being researched, developed and implemented on a global basis, from Stirling engines to wind power, from advanced nuclear plants to geothermal and fuel cells. Our analysis also includes tar sands (oil sands), oil shale, fuel cells, clean coal, distributed power, energy storage, biofuels and much more. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. It contains thousands of contacts for business and industry leaders, industry associations, Internet sites and other resources. This book also includes statistical tables, an industry glossary and thorough indexes. The corporate profiles section of the book includes our proprietary, in-depth profiles of the 250 leading companies in all facets of the alternative, renewable and hydrogen energy business. Here you'll find complete profiles of the hot companies that are making news today, the largest, most successful corporations in the business. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.
