Healing the Fragmented Selves of Trauma Survivors integrates a neurobiologically informed understanding of trauma, dissociation, and attachment with a practical approach to treatment, all communicated in straightforward language accessible to both client and therapist. Readers will be exposed to a model that emphasizes "resolution"—a transformation in the relationship to one's self, replacing shame, self-loathing, and assumptions of guilt with compassionate acceptance. Its unique interventions have been adapted from a number of cutting-edge therapeutic approaches, including Sensorimotor Psychotherapy, Internal Family Systems, mindfulness-based therapies, and clinical hypnosis. Readers will close the pages of Healing the Fragmented Selves of Trauma Survivors with a solid grasp of therapeutic approaches to traumatic attachment, working with undiagnosed dissociative symptoms and disorders, integrating "right brain-to-right brain" treatment methods, and much more. Most of all, they will come away with tools for helping clients create an internal sense of safety and compassionate connection to even their most dis-owned selves.

Magic or spycraft? In 1953, against the backdrop of the Cold War, the CIA initiated a top-secret program, code-named MKULTRA, to counter Soviet mind-control and interrogation techniques. Realizing that clandestine officers might need to covertly deploy newly developed pills, potions, and powders against the adversary, the CIA hired America's most famous magician, John Mulholland, to write two manuals on sleight of hand and undercover communication techniques. In 1973, virtually all documents related to MKULTRA were destroyed. Mulholland's manuals were thought to be among them—until a single surviving copy of each, complete with illustrations, was recently discovered in the agency's archives. The manuals reprinted in this work represent the only known complete copy of Mulholland's instructions for CIA officers on the magician's art of deception and secret communications.

This bestselling work has introduced hundreds of thousands of professionals and students to motivational interviewing (MI), a proven approach to helping people overcome ambivalence that gets in the way of change. William R. Miller and Stephen Rollnick explain current thinking on the process of behavior change, present the principles of MI, and provide detailed guidelines for putting it into practice. Case examples illustrate key points and demonstrate the benefits of MI in addictions treatment and other clinical contexts. The authors also discuss the process of learning MI. The volume's final section brings together an array of leading MI practitioners to present their work in diverse settings.

The Fisher Body Craftsman's Guild was a national auto design competition sponsored by the Fisher Body Division of General Motors. This competition was for teenagers to compete for college scholarships by designing and building scale model "dream" cars. Held from the 1930s through the 1960s, it helped identify and nurture a whole generation of designers and design executives. Virgil M. Exner, Jr., Charles M. Jordan, Robert W. Henderson, Robert A. Cadaret, Richard Arbib, Elia 'Russ' Russinoff, Galen Wickersham, Ronald C. Hill, Edward F. Taylor, George R. Chartier, Charles W. Pelly, Gary Graham, Charles A. Gibilterra, E. Arthur Russell, William A. Moore, Terry R. Henline, Paul Tatseos, Allen T. Weideman, Kenneth J. Dowd, Stuart Shuster, John M. Mellberg, Harry E. Schoepf, and Ronald J. Will, are among those designers and design executives who participated in the Guild. The book also describes many aspects of the miniature model Napoleonic Coach and other scale model cars the students designed.

The Psychedelic Experience, created in the movement's early years by the prophetic shaman-professors Timothy Leary, Ralph Metzner, and Richard Alpert (Ram Dass), is a foundational text that serves as a model and a guide for all subsequent mind-expanding inquiries. In this wholly unique book, the authors provide an interpretation of an ancient sacred manuscript, the Tibetan Book of the Dead, from a psychedelic perspective. Reissued here to coincide with the 50th anniversary of the summer of love.

Healing the Fragmented Selves of Trauma Survivors Taylor & Francis
Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Eyelid myoclonia with absences is a recently described and under-recognised syndrome of idiopathic generalised epilepsy. The diagnosis may be confused with tics, attempts at self induction, and epilepsy syndromes with a better prognosis such as childhood absence epilepsy. This book summarises current knowledge on the topic; covering the underlying anatomy and physiology of the eyelids, the clinical and electro-encephalographic features and differential diagnosis in children and adults, including a discussion on the issue of self-induction of absences. The current state of knowledge on inheritance and genetics of the condition and treatment strategies are considered. Throughout, recent advances in the field are couched in an historical context, making this book a comprehensive source for all those who need to understand this syndrome whether from a research standpoint or the clinical management of affected children and adults. As such it will be of value to neurologists, epileptologists and those involved in the care and treatment of epileptic patients.
