This volume collects the results from the Politecnico di Milan's award-winning "Boa_Ma_Nhã, Maputo!" research-by-design project, which studied various transdisciplinary approaches to development in the context of the Global South. The challenges of urbanization are well known, but that only goes so far in aiding implementation. From local considerations like water access and housing rights to global issues like climate change, territorial development demands solutions that address the needs of the specific population while keeping such goals as sustainability and inclusion in mind. By focusing on a number of towns within the Maputo Province of Mozambique, and thus addressing many of the issues endemic to Sub-Saharan Africa, the research, structurally presented so as to aid those who may require introduction to the issue, makes a clear case in favor of always keeping the Water-Energy-Food (WEF) Nexus in mind when formulating development strategies for improving people's lives, as well as the wisdom of marrying academic findings with the insights accrued by local NGOs and institutions, thereby expanding the potential idea bank beyond the Eurocentric status quo that has tended to dominate the field.

Invertebrate Zoology: A Tree of Life Approach is a comprehensive and authoritative textbook adopting an explicitly phylogenetic organization. Most of the classical anatomical and morphological work has not been changed - it established the foundation of Invertebrate Zoology. With the explosion of Next-Generation Sequencing approaches, there has been a sea-change in the recognized phylogenetic relationships among and between invertebrate lineages. In addition, the merger of evolutionary and developmental biology (evo-devo) has dramatically contributed to changes in the understanding of invertebrate biology. Synthesizing these three approaches (classical morphology, sequencing data, and evo-devo studies) offers students an entirely unique perspective of invertebrate diversity. Key Features One of the first textbooks to combine classical morphological approaches and newer evo-devo and Next-Generation Sequencing approaches to address Invertebrate Zoology Organized along taxonomic lines in accord with the latest understanding of invertebrate phylogeny Will provide background in basic systematic analysis useful within any study of biodiversity A wealth of ancillary materials for

students and teachers, including downloadable figures, lecture slides, web links, and phylogenetic data matrices
