An inside look at America's most controversial charter schools, and the moral and political questions around public education and school choice. The promise of public education is excellence for all. But that promise has seldom been kept for low-income children of color in America. In How the Other

Half Learns, teacher and education journalist Robert Pondiscio focuses on Success Academy, the network of controversial charter schools in New York City founded by Eva Moskowitz, who has created something unprecedented in American education: a way for large numbers of engaged and ambitious low-income families of color to get an education for their children that equals and even exceeds what wealthy families take for granted. Her results are astonishing, her methods unorthodox. Decades of well-intended efforts to improve our

schools and close the "achievement gap" have set equity and excellence at war with each other: If you are wealthy, with the means to pay private school tuition or move to an affluent community, you can get your child into an excellent school. But if you are poor and black or brown, you have to settle for "equity" and a lecture--about fairness. About the need to be patient. And about how school choice for you only damages public schools for everyone else. Thousands of parents have chosen Success Academy, and thousands more sit on

waiting lists to get in. But Moskowitz herself admits Success Academy "is not for everyone," and this raises uncomfortable questions we'd rather not ask, let alone answer: What if the price of giving a first-rate education to children least likely to receive it means acknowledging that you can't do it for everyone? What if some problems are just too hard for schools alone to solve? Congressional Oversight Panel July Oversight Report DIANE Publishing Pratiyogita Darpan (monthly magazine) is

Meet the challenges of high stakes testing in the practice of school psychology School psychologists can be a positive influence on how students, teachers, parents, schools, and communities cope with the challenges and opportunities associated with high stakes testing. Unfortunately, there has been a significant lack of literature to guide school psychologists and related school-based practitioners on this topic. High Stakes Testing: New

Challenges and Opportunities for School Psychology is a timely groundbreaking book that provides useful and thought-provoking information to help psychologists meet the challenges of high stakes testing and create new roles for themselves in helping children succeed. This book discusses practical ways to help provide academic support to facilitate student success on high stakes tests, reduce the impact of stress associated with high stakes testing, assess the data from the tests to improve programs, and take a leadership role in the

appropriate use of the tests. The No Child Left Behind Act of 2001 (NCLB) and its accountability provisions has helped create and sustain a climate where student performance on state-created achievement tests often has high stakes implications for students, families, and schools. High Stakes Testing: New Challenges and Opportunities for School Psychology provides important background information about high stakes testing, including the legal, historical, and political context of high stakes testing, pertinent

psychometrics, and a review of research on academic and non-academic outcomes as it relates to high stakes testing. Using this information as a foundation, the book then identifies new roles and opportunities for school psychologists with respect to high stakes testing. This book is comprehensively referenced. Topics in High Stakes Testing: New Challenges and Opportunities for School Psychology include: advocating for the appropriate use of state-wide assessments the influence of item response	theory (IRT) on the development of high stakes tests whether the accountability system of NCLB is truly improving student ' s learning the impact of high stakes tests on classroom instruction and student motivation strategies for helping students succeed on high stakes tests available resources to cope with the stress of high stakes testing and more High Stakes Testing: New Challenges and Opportunities for School Psychology is a thought-provoking, horizon-expanding resource for school psychologists, public	school educators, administrators, school counselors, curriculum coordinators, and special education teachers involved in organizing, administering, and preparing students to take high stakes tests. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and	incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library (www.thecochranelibrary.com). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. As such, this course represents an important opportunity for

students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For

these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for

this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
