### **The Praetorian STARShip : the untold story of the Combat Talon** Springer Science & Business Media

The Assault on Peleliu, first published in 1950, is a detailed recounting of the U.S. Marines' fierce battle for Peleliu, part of the Palau Islands in the south Pacific. Facing approx. 11,000 hardened, entrenched Japanese troops, the 1st Marine Division began landing operations on September 15, 1944. What followed were more than two months of bloody fighting resulting in heavy casualties before the island was declared secure in late November. Included are more than 90 photographs and maps.

The Columbia Guide to Basic Elements of Eye Care Penguin Jerry Thigpen's study on the history of the Combat Talon is the first effort to tell the story of this wonderfully capable machine. This weapons system has performed virtually every imaginable tactical event in the spectrum of conflict and by any measure is the most versatile C-130 derivative ever produced. First modified and sent to Southeast Asia (SEA) in 1966 to replace theater unconventional warfare (UW) assets that were limited in both lift capability and speed the Talon I quickly adapted to theater UW tasking including infiltration and resupply and psychological warfare operations into North Vietnam. After spending four years in SEA and maturing into a highly respected UW weapons system the Joint Chief of Staff (JCS) chose the Combat Talon to lead the night low-level raid on the North Vietnamese prison camp at Son Tay. Despite the outcome of the operation the Talon I cemented its reputation as the weapons system of choice for long-range clandestine operations. In the period following the Vietnam War United States Air Force (USAF) special operations gradually lost its political and financial support which was graphically demonstrated in the failed Desert One mission into Iran. Thanks to congressional supporters like Earl Hutto of Florida and Dan Daniel of Virginia funds for aircraft upgrades and military construction projects materialized to meet the ever-increasing threat to our nation. Under the leadership of such committed hard-driven officers as Brencci Uttaro Ferkes Meller and Thigpen the crew force became the most disciplined in our Air Force. It was capable of penetrating hostile airspace at night in a low-level mountainous environment covertly to execute any number of unconventional warfare missions.

The bestselling author of No Logo shows how the global "free market" has exploited crises and shock for three decades, from Chile to Iraq In her groundbreaking reporting, Naomi Klein introduced the term "disaster capitalism." Whether covering Baghdad after the U.S. occupation, Sri Lanka in the wake of the tsunami, or New Orleans post-Katrina, she witnessed something remarkably similar. People still reeling from catastrophe were being hit again, this time with economic "shock treatment," losing their land and homes to rapid-fire corporate makeovers. The Shock Doctrine retells the story of the most dominant ideology of our time, Milton Friedman's free market economic revolution. In contrast to the popular myth of this movement's peaceful global victory, Klein shows how it has exploited moments of shock and extreme violence in order to implement its economic policies in so many parts of the world from Latin America and Eastern Europe to South Africa, Russia, and Iraq. At the core of disaster capitalism is the use of cataclysmic events to advance radical privatization combined with the privatization of the disaster response itself. Klein argues that by capitalizing on crises, created by nature or war, the disaster capitalism complex now exists as a booming new economy, and is the violent culmination of a radical economic project that has been incubating for fifty years.

The Saudi Arabian economy has changed almost beyond recognition since the oil boom days of the 1980s, and the Kingdom itself has changed too economically, socially, and demographically. In the second edition of *The Saudi Arabian Economy*, Mohamed Ramady uses several overlapping themes to establish and develop a framework for studying the fundamental challenges to the Saudi economy. Particular attention is paid to the benefits of short-term planning and long-term diversification intended to shield the economy from potentially de-stabilizing oil price fluctuations and the pace and diversity of domestic reforms. The author examines the core strengths and evolution of various financial institutions and the Saudi stock market in the face of globalization, before analyzing the private sector in detail. Topics discussed include: • The hydrocarbon and minerals sector, including the emergence of the competitive petrochemical sector • The impact of small and medium sized businesses and the evolving role of "family" businesses • The growing role of women in the Saudi economy • The role of privatization and FDI as engines of change and the position of public-private-partnerships • The establishment of a foundation for a knowledge-based economy Finally, the author offers an analysis of the key challenges facing the Saudi economy, paying particular attention to the potential costs and benefits of globalization, and membership in the WTO. Employment, education, economic and social stability, and Saudi Arabia's place in the Gulf Cooperation Council, as well as Saudi Arabia's evolving strategic economic relations with China and other countries are offered as keys to the consensus building needed to ensure the Kingdom's healthy economic future.

This global environmental and political history "will redefine the way we think about the European colonial project" (Observer). "... sets the triumph of the late 19th-century Western imperialism in the context of catastrophic El Niño weather patterns at that time... groundbreaking, mind-stretching." —The Independent Examining a series of El Niño-induced droughts and the famines that they spawned around the globe in the last third of the 19th century, Mike Davis discloses the intimate, baleful relationship between imperial arrogance and natural incident that combined to produce some of the worst tragedies in human history. Late Victorian Holocausts focuses on three zones of drought and subsequent famine: India, Northern China; and Northeastern Brazil. All were affected by the same global climatic factors that caused massive crop failures, and all experienced brutal famines that decimated local populations. But the effects of drought were magnified in each case because of singularly destructive policies promulgated by different ruling elites. Davis argues that the seeds of underdevelopment in what later became known as the Third World were sown in this era of High Imperialism, as the price for capitalist modernization was paid in the currency of millions of peasants' lives.

This unique resource is a practical, easy-to-use guide for the non-ophthalmologist healthcare provider as they encounter patients with eye complaints and other concerning ophthalmic conditions. The Columbia Guide to Basic Elements of Eye Care is specifically designed with the non-ophthalmologist in mind, and provides a foundation of basic eye anatomy and physiology, functional analysis, pathology, and concepts in eye care. Each chapter delivers an accessible summary of various ophthalmic diseases and conditions, all of which are frequently encountered in everyday practice. These chapters provide in-depth discussions on a wide range of topics, from testing and examination procedures to management protocols, referral guidelines and expected frequency of follow-up for each disorder. Complete with hundreds of high-quality, descriptive illustrations and clinical photographs, *The Columbia Guide to Basic Elements of Eye Care* presents clear, understandable explanations of basic eye anatomy, physiology, disease and treatment for non-ophthalmic practitioners and students. In doing so, this guide provides a framework for determining the normal versus the abnormal, helping the reader recognize which patients require referral, and identify which conditions are developing, require urgent treatment, or can be routinely followed. Non-ophthalmologist healthcare providers and students alike will find this book, written by leaders in the field, a practical resource to consult as they encounter patients with treatable but potentially sight-threatening conditions.

This is the fourth volume in an operational and chronological series covering the U.S. Marine Corps' participation in the Vietnam War. This volume details the change in focus of the III Marine Amphibious Force (III MAF), which fought in South Vietnam's northernmost corps area, I Corps. This volume, like its predecessors, concentrates on the ground war in I Corps and III MAF's perspective of the Vietnam War as an entity. It also covers the Marine Corps participation in the advisory effort, the operations of the two Special Landing Forces of the U.S. Navy's Seventh Fleet, and the services of Marines with the staff of the U.S. Military Assistance Command, Vietnam. There are additional chapters on supporting arms and logistics, and a discussion of the Marine role in Vietnam in relation to the overall American effort.

This book directly addresses a long-felt, unsatisfied need of modern color science - an appreciative and technically sound presentation of the principles and main offerings of colorimetry to artists and designers, written by one of them. With his unique blend of training and experience in engineering, with his lifelong interest and, latterly, career in art and art education, Dr. Agoston is unusually well prepared to convey the message of color science to art and design. His book fulfills the hopes I had when I first heard about him and his book. I foresee important and long-lasting impacts of this book, analogous to those of the epoch-making writings by earlier artist-scientists, such as Leonardo, Chevreul, Munsell, and Pope. Nearly all persons who have contributed to color science, recently as well as formerly, were attracted to the study of color by color in art. Use of objective or scientific methods did not result from any cold, detached attitude, but from the inherent difficulties of the problems concerning color and its use, by which they were intrigued. Modern education and experience has taught many people how to tackle difficult problems by use of scientific methods. Therefore - color science. **Nudge** Springer Nature

Part I of this work focuses on the ways in which digitization projects can affect fundamental justice principles. It examines claims that technology will improve justice system efficiency and offers a model for evaluating e-justice systems that incorporates a broader range of justice system values. The emphasis is on the complicated relationship between privacy and transparency in making court records and decisions available online. Part II examines the implementation of technologies in the justice system and the challenges it comes with, focusing on four different technologies: online court information systems, e-filing, videoconferencing, and tablets for presentation and review of evidence by jurors. The authors share a measuring enthusiasm for technological advances in the courts, emphasizing that these technologies should be implemented with care to ensure the best possible outcome for access to a fair and effective justice system. Finally, Part III adopts the standpoints of sociology, political theory and legal theory to explore the complex web of values, norms, and practices that support our systems of justice, the reasons for their well-established resistance to change, and the avenues and prospects of eAccess. The chapters in this section provide a unique and valuable framework for thinking with the required sophistication about legal change. Published in English. Italy Pickle Partners Publishing

The crisis in the auto industry has resulted in a race between Volkswagen, as challenger, and Toyota, as tattered global market leader. Whether it is the German or the Japanese firm that takes pole position, the winner will change the balance of power in the automotive industry and lead the way to the automobiles of the future.

Kinetics of Chemical Processes details the concepts associated with the kinetic study of the chemical processes. The book is comprised of 10 chapters that present information relevant to applied research. The text first covers the elementary chemical kinetics of elementary steps, and then proceeds to discussing catalysis. The next chapter tackles simplified kinetics of sequences at the steady state. Chapter 5 deals with coupled sequences in reaction networks, while Chapter 6 talks about autocatalysis and inhibition. The seventh chapter describes the irreducible transport phenomena in chemical kinetics. The next two chapters discuss the correlations in homogenous kinetics and heterogeneous catalysis, respectively. The last chapter covers the analysis of reaction networks. The book will be of great use to students, researchers, and practitioners of scientific disciplines that deal with chemical reaction, particularly chemistry and chemical engineering.

Deep Learning-Based Approaches for Sentiment Analysis Taunton  
During the turbulent 1960s, civil rights leader Whitney M. Young Jr. devised a new and effective strategy to achieve equality for African Americans. Young blended interracial mediation with direct protest, demonstrating that these methods pursued together were the best tactics for achieving social, economic, and political change. *Militant Mediator* is a powerful reassessment of this key and controversial figure in the civil rights movement. It is the first biography to explore in depth the influence Young's father, a civil rights leader in Kentucky, had on his son. Dickerson traces Young's swift rise to national prominence as a leader who could bridge the concerns of deprived blacks and powerful whites and mobilize the resources of the white America to battle the poverty and discrimination at the core of racial inequality. Alone among his civil rights colleagues—Martin Luther King Jr., Roy Wilkins, James Farmer, John Lewis, and James Forman—Young built support from black and white constituencies. As a National Urban League official in the Midwest and as a dean of the School of Social Work at Atlanta University during the 1940s and 1950s, Young developed a strategy of mediation and put it to work on a national level upon becoming the executive director of the League in 1961. Though he worked with powerful whites, Young also drew support from middle-and working-class blacks from religious, fraternal, civil rights, and educational organizations. As he navigated this middle ground, though, Young came under fire from both black nationalists and white conservatives.
