The study of electrochemical reactions by relaxation or transient
techniques has expanded rapidly over the last two decades. The
impetus for the development of these techniques has been the desire

to obtain quantitative data on the rates of "fast" electrochemical
processes, including those coupled to homogeneous chemical
reactions in solution. This has necessarily meant the development of
techniques that are capable of delineating the effects of mass
transport and charge transfer at very short times. The purpose of this
book is to describe how the various transient techniques may be used
to obtain the desired information. Emphasis is placed upon the
detailed mathematical development of the subject, since this aspect is
the most frequently ignored in other texts in this field. In any relaxation
or transient technique for the study of rate processes, it is necessary
to disturb the reaction from equilibrium or the steady state by applying
a perturbing impulse to the system. The system is then allowed to
relax to a new equilibrium or steady-state position, and the transient
(i. e. , the response as a function of time) is analyzed to extract the
desired kinetic information. In electrochemical studies the
heterogeneous rate constants are, in general, dependent upon the
potential difference across the interface, so that the perturbing impulse
frequently takes the form of a known variation in potential as a function
of time.

Much of today's communication is carried out through various kinds of humor, and we therefore need to be able to understand its many aspects. Here, two of the world's leading pioneers in humor studies, Alleen and Don Nilsen, explore how humor can be explained across the numerous sub-disciplines of linguistics. Drawing on examples from language play and jokes in a range of real-life contexts, such as art, business, marketing, comedy, creative writing, science, journalism and politics, the authors use their own theory of 'Features, functions and subjects of Humor' to analyze humor across all disciplines. Each highly accessible chapter uses a rich array of examples to stimulate discussion and interaction even in large classes.

Supplemental PowerPoints to accompany each of the 25 chapters are available online, taking many of the insights from the chapters for further interactional discussions with students.
