"The signs and instruments of power are no longer armed legions or raw materials or capital... The wealth we seek does not lie in the earth or in numbers of men or in machines, but in the human spirit. And particularly in the ability of men to think and to create." -- Jean-Jacques Servan-Schreiber in his international bestseller, *The American Challenge*. *The American Challenge* was 50 years ahead of its time in its appraisal of Europe, industrialization, the global economy and digital future, and the sclerosis of French politics. A new generation of French and Europeans can now rediscover it and take measure of all that still remains to be accomplished to bring to fruition the post-war European dream. "The world we live in is very much the world Servan-Schreiber imagined," Professor Paul Krugman writes in his preface to this ebook edition, further adding that "JJSS was an incredibly insightful prophet." With its radically new economic and political vision, *The American Challenge* was a bestseller when first published in 1967. Selling over 2 million copies in France and more than 10 million throughout the world, the book was translated and published in 16 languages and 26 countries. This first ebook edition provides the original edition's text in its entirety. Available from all major online retailers, it includes a new preface by New York Times op-ed contributor and Nobel Prize winner in Economics, Paul Krugman, acclaiming a book that "marked a whole generation." Praise for "The American Challenge": "The American Challenge, was not only a game changer for European – American relations, it also

provided a new and innovative conception of national competitiveness. The book was a true catalyst in the creation of the World Economic Forum." - Klaus Schwab, Founder and Chairman, The World Economic Forum "Jean-Jacques Servan-Schreiber first put forth his bold vision of accelerating American prosperity back in 1967. While this outcome seemed inevitable at the time, half a century later we have fallen far short of that future. The reissue of his landmark book serves as a clarion call for our stagnant civilization to find a way back to the optimistic future of the 1960s." - Peter Thiel, Co-Founder of Paypal, Managing Partner of the Founders' Fund "Jean-Jacques Servan-Schreiber was a true humanist. He understood the importance of the sovereignty for the people in the wake of European colonialism, as well as the potential in federating resources in an increasingly multipolar world, exemplified by his support of the European integration. He also foresaw the possibilities and challenges of modern technology." - Nicolas Berggruen, President, Berggruen Institute on Governance "The American Challenge is an excellent, vigorous and modern book – that is to say, one free of many of the usual shortcomings and repetitiveness of commonplace thinking." - Val é ry Giscard d'Estaing, President of France, 1974-1981 "The American Challenge is at the top of the best seller lists. For a tome rich in statistics and dealing with the world of economic and corporate development, computers, satellites and the rivalries of industrial power blocs, this is an astonishing success. If Marx had done as well with "Das Kapital", we might all be waving red flags and eating caviar." - New York Times, May 19, 1968

'Another riveting book from Anna Jacobs' - 5-star reader review Seventeen-year-old Liza is happy working as a lady's maid - until her employers decide to emigrate and her father makes up his mind that she is to wed an older widower whom she detests. Determined to avoid a loveless marriage, Liza plans to run away. But when the widower rapes her to force her to marry him, she flees back to the family for whom she worked. She feels she has no choice but to go with them to Australia, and they all set out on the long voyage. On board ship, Liza discovers to her horror that she has fallen pregnant. Even if she can survive the journey, the demanding life of a settler in 1850s Western Australia will be made even harder by an illegitimate child. But Liza is to find that in addition to deprivation of the worst sort, Australia will offer her opportunities she could never have dreamt of back home in Lancashire.

Scientists from management and strategy, information systems, engineering and telecommunications have discussed a novel concept: Smart Business Networks. They see the future as a developing web of people and organizations, bound together in a dynamic and unpredictable way, creating smart outcomes from quickly (re-)configuring links between actors. The question is: What should be done to make the outcomes of such a network 'smart', that is, just a little better than that of your competitor? More agile, with less pain, with more return to all the members of the network, now and

over time? The technical answer is to create a 'business operating system' that should run business processes on different organisational platforms. Business processes would become portable: The end-to-end management of processes running across many different organizations in many different forms would become possible. This book presents you the outcomes of an energizing and new direction in management science.

haXe is a new programming language whose features are mainly coming from object-oriented languages such as Java. Other features are taken from more dynamic Scripting languages as well as from Functional languages. It is a language, a compiler, and a framework of classes designed to help developers write clean code. It opens up the world of application development and reduces the learning curve while minimizing potential roadblocks. It is difficult to write a book on haXe because there are so many possibilities that the language can provide. It is able to target three platforms: JavaScript, Flash, and Neko. It opens a lot of doors for web developers. The combination of these different technologies makes it possible to create things today that were hard to imagine yesterday. haXe makes it possible to develop applications targeting multiple platforms very quickly. Neko is a cross-platform virtual machine and it acts as one of the targets of the haXe compiler. It is lightweight, fast, and flexible. It can be embedded and requires a small footprint that makes it practically invisible. When combined with haXe, it can open a lot of doors to pure web development (e.g., real-time servers and console and

desktop applications). This book is for web developers who would like to work with a unified environment while at the same time reducing the number of languages required to produce a single software solution. Although you don't have to be a veteran programmer to utilize the information in this book, it helps if you have already programmed in ActionScript, Java, or another ECMA standard language. The material in this book is split into three parts based on the content that each part is discussing. The first part of the book focuses mainly on the basics of the haXe programming language. Details are given about the language structure, standard libraries, and programming practices. If you are an experienced haXe programmer you can probably skip this section. Those who are familiar with programming but are new to haXe can go through the first section easily and look mainly at the code examples and tables that detail the classes and commands required to develop in haXe. The second part of the book covers the practical uses of haXe, including the production of Flash movies and dynamic content for websites. This part is useful to programmers of any skill level. This section also contains references to platform-specific classes defined in the standard library (the core framework that comes with the haXe base installation). The third part of the book is dedicated to the advanced developer who wants to use haXe for all it has to offer. It also discusses how to extend haXe with existing libraries or how to use haXe outside of the conventional web environment. In order to use this book you need to have a computer that operates on Windows, Linux, or either

type of Apple Macintosh. All of the tools described in the book are open source and are available for download on the internet (for free!). Franco Ponticelli graduated with a degree in architecture with a specialization in industrial design. Within the Information Technology area, he was involved in many different activities ranging from 3D Computer Graphics to software development. He discovered haXe through his research to find the perfect development environment. Lee-McColl Sylvester is an expert in ActionScript developing and is knowledgeable about systems integrations. He studied visual communications and supplemented his career by specializing in advanced graphical interface development and information management systems.

OPEN (Object-oriented Process, Environment and Notation) is an international de facto standard object-oriented development method developed and maintained by the OPEN Consortium. OPEN consists of the OPEN Modeling Language (OML) as well as process, metrics, etc. This book specifies OML, a small but vital component of the complete OPEN method. It uses diagrams, tables, Web references and text to present the syntax, semantics and rationale behind OML. It documents version 1.0 of OML so that object-oriented modelers can learn and use it, and upperCASE vendors can support it.

Dr Derclay's book is well structured. . . the methodology is theoretical and comparative. . . Derclay's work on database law is timely and readable, presenting a sound thesis to

the perceived problems. Patricia Akester, *Journal of Intellectual Property* This book has a wide-ranging, detailed appeal for all lawyers, students and those in the public and private sectors. . . Richard Chambers . . . this book is a detailed, comprehensive and well-researched examination of legal protection of databases, which offers a valuable template for reform that will be of great interest to academics and policymakers alike. Tanya Aplin, *European Intellectual Property Review* The protection of the investment made in collecting, verifying or presenting database contents is still not harmonised internationally. Some laws over-protect database contents, whilst others under-protect them. This book examines and compares several methods available for the protection of investment in database creation namely, intellectual property, unfair competition, contract and technological protection measures in order to find an adequate type and level of protection. To this effect, the author uses criteria based on a combination of the economics of information goods, the human rights to intellectual property and to information, and the public interest, proposing a model that can be adopted at international and national levels. The *Legal Protection of Databases* will be of interest to intellectual property lawyers, competition lawyers, as well as general commercial lawyers because of the breadth of laws reviewed. It will also appeal to practitioners, policymakers, economists and students.

Apart from MiFID, the Alternative Investment Fund Managers Directive (AIFMD) may be the most important European asset management

regulation of the early twenty-first century. In this in-depth analytical and critical discussion of the content and system of the directive, thirty-eight contributing authors - academics, lawyers, consultants, fund supervisors, and fund industry experts - examine the AIFMD from every angle. They cover structure, regulatory history, scope, appointment and authorization of the manager, the requirements for depositaries and prime brokers, rules on delegation, reporting requirements, transitional provisions, and the objectives stipulated in the recitals and other official documents. The challenging implications and contexts they examine include the following: - connection with systemic risk and the financial crisis; - nexus with insurance for negligent conduct; - connection with corporate governance doctrine; - risk management; - transparency; - the cross-border dimension; - liability for lost assets; - impact on alternative investment strategies, and - the nexus with the European Regulation on Long-Term Investment Funds (ELTIFR). Nine country reports, representing most of Europe's financial centres and fund markets add a national perspective to the discussion of the European regulation. These chapters deal with the potential interactions among the AIFMD and the relevant laws and regulations of Austria, France, Germany, Italy, Luxembourg, Liechtenstein, The Netherlands, Malta and the United Kingdom. The second edition of the book continues to deliver not only the much-needed discussion of the inconsistencies and difficulties when applying the directive, but also provides guidance and potential solutions to the problems it raises. The second edition considers all new developments in the field of alternative investment funds, their managers, depositaries, and prime brokers, including, but not limited to, statements by the European Securities and Markets Authority (ESMA) and national competent authorities on the interpretation of the AIFMD, as well as new European regulation, in particular the PRIIPS Regulation, the ELTIF Regulation, the Regulation on European Venture Capital Funds (EuVeCaR), the Regulation on European Social Entrepreneurship Funds (EUSEFR), MiFID II, and UCITS V. The book will be warmly welcomed by

investors and their counsel, fund managers, depositaries, asset managers, administrators, as well as regulators and academics in the field.

Destination Europe interprets and interrelates the major political, economic and security developments in Europe--including transatlantic relations--from the end of World War II up until the present time, and looks ahead to how the continent may evolve politically in the future. The book fills a definite lacuna in the current literature on Europe, as most studies cover only specific aspects, such as the European Union. *Destination Europe*, by contrast, weaves all the different strands of European events together into a single overall and up-to-date picture and gives the reader a deeper understanding of the continent and its current and future challenges.

The Handbook is a virtual encyclopedia of public financial management, written by topmost experts, many with a background in the IMF and World Bank. It provides the first comprehensive guide to the subject that has been published in more than ten years. The book is aimed at a broad audience of academics/students, government officials, development agencies and practitioners. It covers both bread-and-butter topics such as the macroeconomic and legal framework for budgeting, budget

preparation and execution, procurement, accounting, reporting, audit and oversight, as well as specialist subjects such as government payroll systems, local government finance, fiscal transparency, the management of fiscal risks, sovereign wealth funds, the management of state-owned enterprises, and political economy aspects of budgeting. The book sets out numerous examples and case studies describing good practice in public financial management, and is highly relevant for use in both advanced and developing countries.

This book proposes a model for understanding how innovative policy decisions are taken in complex political and organizational systems as well as the possible strategies that the promoter of the innovation can employ in order to maximize the probability of successful adoption and implementation. It presents a conceptual framework for the analysis of decisional situations in order to design the most appropriate strategies for overcoming conflict (e.g. of the NIMBY variety) and/or increasing the engagement of potentially interested actors. The book includes a template for decisional case studies, a protocol for the definition of a decisional strategy, and an exercise in decisional analysis.

"Ideas move mountains, especially in turbulent times. Lovemarks is the product of the fertile-iconoclast mind of Kevin Roberts, CEO Worldwide of Saatchi & Saatchi. Roberts argues vociferously, and with a ton of data to support him, that traditional branding practices have become stultified. What's needed are customer Love affairs. Roberts lays out his grand scheme for mystery, magic, sensuality, and the like in his gloriously designed book Lovemarks." -Tom Peters Tom Peters, one of the most influential business thinkers of all time, described the first edition of Lovemarks: the future beyond brands as "brilliant." He also announced it as the "Best Business Book" published in the first five years of this century. Now translated into fourteen languages, with more than 150,000 copies in print, Lovemarks is back in a revised edition featuring a new chapter on the peculiarly human experience of shopping. The new chapter, "Diamonds in the Mine," is an insightful collection of ideas for producers and consumers, for owners of small stores and operators of superstores. So forget making lists! Shopping, says Kevin Roberts, is an emotional event. With this as a starting point, he looks at the history of shopping and how it

has changed so dramatically over the last ten years. Using the Lovemark elements of Mystery, Sensuality, and Intimacy, Roberts delves into the secrets of success that can be used to create the ultimate shopping experience.

Vehicle Safety 2000 emphasizes the findings of new research and development, the outcome of new design solutions, their applications in the overall field of safety, and provides the opportunity to read the latest on the key vehicle safety issues and technologies. Vehicle Safety 2000 addresses the issues of incorporating the most up-to-date innovations while considering new and existing legislation and cover such topics as: Pedestrian protection Structures, crashworthiness, and compatibility Regulations and consumer information Crashes, injuries, and biomechanics Restraint, design, and performance These transactions bring together a wide range of international expertise concerning future improvements in vehicle safety, making this volume vital reading for vehicle and component designers, manufacturers and suppliers, researchers, legislators, and road user groups. *Restructuring Law and Practice* Wiley

The powerful and beautiful Alfa Romeo Montreal coupé is the ultimate "dream car that came true." Created as a futuristic concept car for Canada's Expo 67 World Fair, the exciting prototype was a dream car par excellence. The production model to which it gave birth was equipped with a race-bred 200bhp V8 engine, and manufactured in series from 1970 to 1977. Almost 4,000 Montreals were built, and sound cars are readily available today at very affordable prices. This book is a comprehensive pictorial tribute to the Montreal, a visual testimonial to the combined talents of Alfa Romeo engineers and Bertone stylists. It highlights the fusion of technical ingenuity and aesthetics that created one of the most stunning series production automobiles of the

twentieth century. The book explores the marriage of technology and art that appeals to both reason and the heart, combining man's rational desire for fast, efficient personal transportation with his emotive passion for exotic vehicles. In a portfolio of over 500 illustrations, it paints a unique and detailed graphic portrait of all the facets of this elegant and potent classic GT, revealing why it is immensely enjoyable to drive and turns heads wherever it appears.
