Linda Kaplan Thaler and Robin Koval have moved to the top of the advertising industry by following a simple but powerful philosophy: it pays to be nice. Where so many companies encourage a dog-eat-dog mentality, The Kaplan Thaler Group has succeeded through chocolate and flowers. In *The Power of Nice*, through their own experiences and the stories of other people and businesses, they demonstrate why, contrary

to conventional wisdom, nice people finish first. *The Power of Nice* shows that 'nice' companies have lower employee turnover, lower recruitment costs and higher productivity. Nice people live longer, are healthier and make more money. In today's interconnected world, companies and people with a reputation for cooperation and fair play forge the kind of relationships that lead to bigger and better opportunities, both in business and in life. But being nice doesn't mean being a push-over. In fact, nice may be the toughest four-letter word you'll ever encounter. Kaplan Thaler and Koval illustrate the surprising power of nice with an array of real-life examples from the business arena as well as from their personal lives. Most important, they present a plan of action covering everything from creating a positive impression to sweetening the pot to turning enemies to allies. Filled with inspiration and suggestions on how to supercharge your career

and expand your reach in the workplace, *The Power of Nice* will transform how you live and work.

Spacelab was a reusable laboratory facility that was flown on the Space Shuttle from 1983 to 1998.

Completing 22 major missions and contributing to many other NASA goals, Spacelab stands as one of the Shuttle program 's most resounding successes. The system comprised multiple components, including a pressurized laboratory module, unpressurized carrier pallets and other related hardware, all housed in the Shuttle 's Payload

Bay and crew compartment. But how did all those varied components actually come together? The answer is the little-known “ Level-IV ” , a team of managers and engineers who molded separate elements of hardware into cohesive and safe payloads. Without the dedication and drive of the Level-IV team, the huge successes of the Spacelab missions would not have been achieved. This is their story. You will learn herein how Level-IV was formed, who was involved, and the accomplishments, setbacks and problems faced along the way, in a story that blends both the professional and personal sides of Level-IV operations and its legacy. Upon reading this book, you will gain a new appreciation for this crucial team and understand what is meant when you hear the term “ Level-IV ” .

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London,

UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. *Rare Metal Technology 2020* Ingram

A lost dog. Not a lost cause. For more than a year, over two brutal Northeast winters, the whole of Vermont was captivated by the hunt for a runaway golden retriever named Murphy.

He was more than a missing dog-he was a target for capture, and journalistic obsession.

Murphy's disappearance would unite the dog's increasingly anxious owners with an impassioned reporter-Wilson Ring, the state's correspondent for The Associated Press-and an online community of animal lovers. As Murphy kept running, the quest to bring him home, safe and sound, seemed more and more impossible. The search itself takes on an aspect of devotion, as the searchers display genuine resilience and ingenuity-human qualities of an increasingly rare breed. This paperback edition includes the following bonus materials: New Foreword, Afterword, A "Catching Murphy" reunion, Photo Gallery and more!

This collection presents papers from a symposium on extraction of rare metals as well as rare extraction processing techniques used in metal production. Rare metals include strategic metals that are in increasing demand and subject to supply risks. Metals represented include neodymium, dysprosium, scandium and others; platinum group metals including platinum, palladium, iridium, and others; battery related metals

including lithium, cobalt, nickel, and aluminum; electronics-related materials including copper and gold; and refractory metals including titanium, niobium, zirconium, and hafnium. Other critical materials such as gallium, germanium, indium and silicon are also included. Papers cover various processing techniques, including but not limited to hydrometallurgy (solvent extraction, ion exchange, precipitation, and crystallization), electrometallurgy (electrorefining and electrowinning), pyrometallurgy, and aerometallurgy (supercritical fluid extraction). Contributions are focused on primary production as well as secondary production through urban mining and recycling to enable a circular economy. A useful resource for all involved in commodity metal production, irrespective of the major metal. Provides knowledge of cross-application among industries. Extraction and processing of rare metals that are the main building block of many emerging critical technologies have been receiving

significant attention in recent years. The technologies that rely on critical metals are prominent worldwide, and finding a way to extract and supply them effectively is highly desirable and beneficial.

Create physical interfaces that interact with the Internet and web pages. With Arduino and JavaScript you can create interactive physical displays and connected devices that send data to or receive data from the web. You'll take advantage of the processes needed to set up electronic components, collect data, and create web pages able to interact with electronic components. Through exercises, projects, and explanations, this book will give you the core front end web development and electronics skills needed to create connected physical interfaces and build compelling visualizations with a range of JavaScript libraries. By the end of the book you will have

developed fully working interactive prototypes capable of sending data to and receiving data from a physical interface. Most importantly, Connecting Arduino to the Web will give you a taste of what is possible and the knowledge to create your own connected physical interfaces and bring the web into your electronics projects. What You'll Learn Build an Internet of Things dashboard that updates with electronics attached to an Arduino Use components to interact with online 3D displays Create web pages with HTML and CSS Set up a Node.js server Use WebSockets to process live data Interact with scalable vector graphics (SVG) Who This Book Is For Technologists, developers, and enthusiasts looking to extend their skills, be able to develop physical prototypes with connected devices, and with an interest in getting started with IoT. Also, those

excited by the possibilities of connecting the physical and the web.

A Handbook on Legal Languages and the Quest for Linguistic Equality in South Africa and Beyond is an interdisciplinary publication located in the discipline of forensic linguistics/ language and law. This handbook includes varying comparative African and global case studies on the use of language(s) in courtroom discourse and higher education institutions: Kenya; Morocco; Nigeria; Australia; Belgium Canada and India. These African and global case studies form the backdrop for the critique of the monolingual English language of record policy for South African courts, the core of this handbook, discussed in relation to case law and the beleaguered legal interpretation profession. This handbook argues that linguistic

transformation and decolonisation of South Africa's legal and higher education systems needs to be undertaken where legal practitioners are linguistically equipped to litigate in a bilingual/ multilingual courtroom that enables access to justice for the majority of African language speaking litigants, enforcing their constitutional language rights.

Horsepower War shatters nostalgic myths about musclecars and provides historical perspective on today's SUV craze. It proves efficiency and pollution regulation didn't kill the musclecar and that current regulation, which picks winners by favoring SUVs is the real threat. Harless has mined auto literature from the 1960s to the present to reveal granular detail on specific models, while at the same time providing broad perspective on the tectonic shifts in domestic auto making. He approaches political issues as an auto enthusiast, but instead of

being an apologist for industry, he offers principles that embrace market rationality, and enhance the long-term sustainability of cars through rational transportation and energy policy. Harless re-discovers the principles of "conspicuous waste" and "conspicuous consumption"--phrases coined by economist Thorstein Veblen, author of *Theory of the Leisure Class*--to unmask the unacknowledged assumptions of both U.S. consumers and automakers.

A Handbook on Legal Languages and the Quest for Linguistic Equality in South Africa and Beyond Barrett helps the reader assess the current reality of the congregation's financial system, describe its financial potential, look at ways to change how the financial system operates, and design a plan.
