Leadership in Healthcare opens up the world of leadership studies to all healthcare professionals. Physicians, nurses, and other healthcare professionals spend thousands of hours studying the science and technology of healthcare, and years or even decades putting into practice recent findings in molecular biology, clinical diagnostics, and therapeutics. By contrast, the topic of leadership and the traits of effective leaders tend to receive remarkably little attention. Yet no less vital than an understanding of how to interpret diagnostic tests and design care plans is a grasp of healthcare's organizational side, including the operation of multidisciplinary care teams, academic departments, and hospitals. If patient care, education, research, and professional service are to thrive in years to come, we must do a better job of preparing healthcare professionals to lead effectively. Composed of insightful and thought-provoking essays on the key facets of leadership, this book is designed to meet the needs of several important constituencies, including educators of health professionals who wish to incorporate leadership into their educational programs; health professional organizations seeking to enhance their members' leadership effectiveness, and individual health professionals who wish to embrace leadership in their personal and professional lives. This book represents a vital resource for health professionals who wish to enhance the quality of leadership in health professions education, practice, and professional development. In addition to regularly caring for patients, Richard Gunderman, MD PhD MPH brings to this discussion a wealth of personal experience in professional and organizational leadership.

Jean-Nicolas-Louis Durand (1760–1834) regarded the *Précis of the Lectures on Architecture* (1802–5) and its companion volume, the *Graphic Portion* (1821), as both a basic course for future civil engineers and a treatise. Focusing the practice of architecture on utilitarian and economic values, he assailed the rationale behind classical architectural training: beauty, proportionality, and symbolism. His formal systematization of plans, elevations, and sections transformed architectural design into a selective modular

typology in which symmetry and simple geometrical forms prevailed. His emphasis on pragmatic values, to the exclusion of metaphysical concerns, represented architecture as a closed system that subjected its own formal language to logical processes. Now published in English for the first time, the *Précis* and the *Graphic Portion* are classics of architectural education.

Iconic sleuth Nero Wolfe returns to track down the murderer of a New York Symphony Orchestra conductor in this Nero Award–winning mystery. Ever since disgraced associate Orrie Cather 's suicide, armchair detective Nero Wolfe has relished retirement in his Manhattan brownstone on West Thirty-Fifth Street. Two years after Cather 's death, only a visit from Maria Radovich—and the urging of Wolfe 's prize assistant, Archie Goodwin—could draw the eccentric and reclusive genius back into business. Maria 's uncle, New York Symphony Orchestra conductor Milan Stevens, formerly known as Milos Stefanovic, spent his youth alongside Wolfe as a fellow freedom fighter in the mountains of Montenegro. And now that the maestro has been receiving death threats, Wolfe can 't turn his back on the compatriot who once saved his life. Though her uncle has dismissed the menacing letters, Maria fears they 're more than the work of a harmless crank. But before Wolfe can attack the case, Stevens is murdered. The accused is the orchestra 's lead violinist, whose intimate relationship with Maria hit more than a few sour notes in her uncle 's professional circle. But Wolfe knows that when it comes to murder, nothing is so simple—especially when there are so many suspects, from newspaper critics and ex-lovers to an assortment of shady musicians. Now, in this award-winning novel that carries on the great tradition of Rex Stout, the irascible and immovable Nero Wolfe is back in the game, listening for clues and ready to go to war to find a killer. Murder in E Minor is the 48th book in the Nero Wolfe Mysteries, but you may enjoy reading the series in any order.

This book comprehensively covers the topic of recommender systems, which provide personalized recommendations of products or services to users based on their previous searches or purchases. Recommender system methods have been

adapted to diverse applications including query log mining, social networking, news recommendations, and computational advertising. This book synthesizes both fundamental and advanced topics of a research area that has now reached maturity. The chapters of this book are organized into three categories:

Algorithms and evaluation: These chapters discuss the fundamental algorithms in recommender systems, including collaborative filtering methods, content-based methods, knowledge-based methods, ensemble-based methods, and evaluation. Recommendations in specific domains and contexts: the context of a recommendation can be viewed as important side information that affects the recommendation goals. Different types of context such as temporal data, spatial data, social data, tagging data, and trustworthiness are explored. Advanced topics and applications: Various robustness aspects of recommender systems, such as shilling systems, attack models, and their defenses are discussed. In addition, recent topics, such as learning to rank, multi-armed bandits, group systems, multi-criteria systems, and active learning systems, are introduced together with applications. Although this book primarily serves as a textbook, it will also appeal to industrial practitioners and researchers due to its focus on applications and references. Numerous examples and exercises have been provided, and a solution manual is available for instructors.

#### The Book of the Courtier Profile Books

From the author of *How Proust Can Change Your Life*, a delightful, truly consoling work that proves that philosophy can be a supreme source of help for our most painful everyday problems. Perhaps only Alain de Botton could uncover practical wisdom in the writings of some of the greatest thinkers of all time. But uncover he does, and the result is an unexpected book of both solace and humor. Dividing his work into six sections -- each highlighting a different psychic ailment and the appropriate philosopher -- de Botton offers consolation for unpopularity from Socrates, for not having enough money from Epicurus, for frustration from Seneca, for inadequacy from Montaigne, and for a broken heart from Schopenhauer (the darkest of thinkers and yet, paradoxically, the most cheering). Consolation for envy -- and, of course, the final word on consolation -- comes from Nietzsche: "Not everything which makes us feel better is good for us." This wonderfully engaging book will, however, make us feel better in a good way, with equal measures of wit and wisdom.
