INTERNATIONAL BEST SELLER • WINNER OF SPAIN'S BIGGEST LITERARY PRIZE • The first book in the acclaimed series: Barcelona detective Melchor Marín is sent to the countryside to investigate a horrific double murder. Before long, it becomes clear that nothing about the case is quite as it seems. Melchor, the son of a prostitute, went to prison as a teenager, convicted of working for a Colombian drug cartel. Behind bars, he read a book that changed his life: Les Misérables. Then his mother was murdered. He decided to become a cop. This new case, in Terra Alta, a remote region of rural Catalonia—the murder of a wealthy local man and his wife—will turn Melchor's life upside down yet again. Even the Darkest Night is a thought-provoking, elegantly constructed thriller about justice, revenge, and, above all, the struggles of a righteous man trying to find his place in a corrupt world.

Profiling the European citizen: why today's democracy needs to look harder at the negative potential of new technology than at its positive potential. This book contains detailed and nuanced contributions on the technologies, the ethics and law of machine learning and profiling, mostly avoiding the term AI. There is no doubt that these technologies have an important positive potential, and a token reference to such positive potential, required in all debates between innovation and precaution, hereby precedes what follows.

(Includes maps) From September 1943, when Allied troops came ashore near Salerno, until German surrender in May 1945, 312,000 Allied soldiers were killed, wounded, or missing in Italy. Was a campaign that from the first faced the bleak prospect of coming to a dead end against the forbidding escarpment of the Alps worth that cost? Was the objective of tying down German troops to avoid their commitment in northwestern Europe all that the campaign might have accomplished? The answers to those questions have long been sought but, as is the nature of history, must forever remain conjecture. What is established bet, as this volume makes clear, is the tenacity and intrepidity displayed by American and Allied soldiers in the face of a determined and resourceful enemy, harsh weather, sharply convoluted terrain, limited numbers, and indefinite goals in what many of them must have looked upon as a backwater of the war. This volume relates the story of the last year of their struggle. Three volumes previously published tell of the campaign in northwest Africa, the conquest of Sicily and covert politico-military negotiations leading to surrender of the Italian armed forces, and the campaign from the Allied landings on the mainland through the bitter disappointment of the amphibious assault at Anzio. This volume is thus the capstone of a four-volume series dealing with American military operations in the western Mediterranean.

NIST's Manufacturing Engineering Laboratory (MEL) is developing standards that promote interoperability among members of the U.S. automotive supply chain. This study assesses the costs of imperfect interoperability to the U.S. automotive supply chain and describes the sources of these costs. This study estimates that imperfect interoperability imposes at least \$1 billion per year on the members of the U.S. automotive supply chain. By far, the greatest component of these costs is the resources devoted to repairing or reentering data files that are not usable for downstream applications.

100 key writings from spanning across thirty years of the acclaimed New Yorker art critic's career. Hot, Cold, Heavy, Light collects 100 key writings by Peter Schjeldahl spinning thirty years, his last twenty as the art critic of the New Yorker. In this unfailingly lucid guide to an art world in constant, dramatic flux, Schjeldahl addresses new artists and Old Masters with the same pitch of acuity, empathy, and wit. No other writer enhances the reader's experience of art in precise, jargon-free prose as he does, with reviews that are as much essay as criticism. Implicit in Schjeldahl's role as a frontline critic is a focus on artists, issues, and events of urgent relevance to the culture at large. Holt, Cold, Heavy, Light tells us why we still care about Rembrandt and Mantegna, Matisse and Picasso; takes the measure of contemporaries Basquiat and Holzer, Polke and Kiefer, Sherman and Koons; introduces us to newcomers Kerry James Marshall and Laura Owens; and salutes rediscoveries of Florine Stettheimer, Hélio Oiticica, and Peter Hujar. The book provides essential knowledge to anyone curious about the character, quality, and consequence of art today. The pieces in Hot, Cold, Heavy, Light were compiled and arranged by the critic Jarrett Earnest, with an ear attuned to Schjeldahl's range of voices. "The effect of reading him in depth, over time," Earnest says in his introduction, "is like that of great literature. You come away not only with new insights and ideas, but with a feeling of having been granted an extra life." "This is a rapturous read for art lovers and all who appreciate dynamic critical essays," —Booklist "Bruce is no longer The Boss; Peter Schjeldahl is! Hot, Cold, Heavy, Light is the apex of artistic criticism and commentary," —Steve Martin "The great New Yorker art critic writes like an angel about everyone from Vermeer to Picasso, Donatello to Andy Warhol, in beautiful, enjoyable, accessible essays across 30 years," —Philadelphia Inquirer

Applied Business Statistics: Methods and Excel-based applications (second edition) is an introductory Statistics text written specifically for Management students who require an understanding of the role of Statistics in analysing business data in fields such as Marketing, Finance, Human Resources, Production and Logistics. The primary focus of this text is to empower management students with statistical decision making skills so that they become active participants rather than passive observers in business situations where statistical findings are reported and discussed as part of a management decision making process. The text is divided into three major sections: „h exploratory data analysis „h statistical inferences, and „h statistical modelling. Each section focuses on a different role of Statistics as a decision support tool. Emphasis is

therefore placed on: „h the data requirements for the various techniques and issues of data quality „h indentifying likely application areas through numerous illustrative examples „h noting the limitations of techniques for decision analysis, and the valid management interpretation of statistical findings. A new feature of this edition of Applied Business Statistics is the use of computer software such as Excel to perform statistical analysis. Excel's statistical capabilities are illustrated through numerous worked examples found in the text. Students are given the opportunity to familiarize themselves with Excel's statistical capabilities by applying them to data sets of business problems, which are available on the accompanying CD. Students can monitor their learning with the help of the exercises at the end of every chapter. Each statistical technique is developed through business-related worked examples drawn from the author's diverse work experiences as a statistical consultant. In this way, a student can readily grasp the basic concept of the technique as well as see how it would be applied in practice. This combination of method and application should prove helpful to both student and lecturer. With a working knowledge of Excel, students can become managers who are able to design and conduct their own statistical analysis in the workplace. Applied Business Statistics is therefore accessible to all students, as only a basic level of mathematical ability is required to work through this book.
