At last—a beginner's guide to feline technology! The cat parent's guide to common kitty quirks and what they really mean—featuring useful diagrams and hilarious insights! Scratch marks on your furniture. Dead mice on your doorstep. Stray hairs all over your clothes. It's enough to make you cry out, "Why doesn't my cat have an owner's manual?" And now—finally!—she does. Through step-by-step

instructions and helpful schematic diagrams, *The Cat Owner's Manual* explores hundreds of frequently asked questions: • Which breeds interface best with dogs? • How can I maintain a quality exterior finish? • And why does my model always drink from the bathtub? Whatever your concerns, you'll find the answers here—courtesy of celebrated veterinarian Dr. David Brunner and acclaimed author Sam Stall. Together, they provide plenty of useful advice for both new and experienced cat

owners. Radio Navigation Systems for Airports and Airways Guilford Publications

This book highlights the design

principles of ground based radio-navigation systems used in solving navigation tasks in the airfield and on air routes. Mathematical correlations are illustrated that describe its operation, peculiarities of disposition, main technical characteristics, generalized structural diagrams as well as the inter-operation

with onboard equipment. Examples of building, construction, functional diagrams, and characteristics of Russian made radio-navigation systems are discussed. This book is written for students of electronics and aviation disciplines. It can also be useful for aviation specialists as well as for those interested in air radio-navigation.?

The 1st International Conference on "Applied Cryptography and Network Security" (ACNS 2003) was sponsored and organized by ICISA (International Communications and Information Security Association), in cooperation with MiAn Pte. Ltd. and the Kunming government. It was held in Kunming, China in October 2003. The conference proceedings was published as Volume 2846 of the Lecture Notes in Computer Science (LNCS) series of Springer-Verlag. The conference received 191 submissions, from 24 countries and regions; 32 of these papers were accepted, representing 15

countries and regions (acceptance rate of 16.75%). In this volume you will find the revised versions of the accepted papers that were presented at the conference. In addition to the main track of presentations of accepted papers, an additional track was held in the conference where presentations of an industrial and technical nature were given. These presentations were also carefully selected from a large set of presentation proposals. This new international conference series is the result of the vision of Dr. Yongfei Han. The conference concentrates on current developments that advance the use of applied cryptography and its application to systems

and network security. The goal is to represent both academic research works and developments in industrial and technical frontiers. We thank Dr. Han for initiating this conference and for serving as its General Chair.

*RMP*Submit User's Manual* Cengage Learning Bringing together leading authorities, this unique handbook reviews the breadth of current approaches for studying how people think, feel, and behave in everyday environments, rather than in the laboratory. The volume thoroughly describes experience

sampling methods, diary methods, physiological measures, and other self-report and non-self-report tools that allow for repeated, real-time measurement in natural settings. Practical guidance is provided to help the reader design a high-quality study, select and implement appropriate methods, and analyze the resulting data using cutting-edge statistical techniques. Applications across a wide range of psychological subfields and research areas are discussed in detail.

On behalf of the

program committee, we were pleased to present this year's program for ACSAC: Asia-Pacific Computer Systems Architecture Conference. Now in its ninth year, ACSAC continues to provide an excellent forum for researchers, educators and practitioners to come to the Asia-Pacific region to exchange ideas on the latest developments in computer systems architecture. This year, the paper submission and review processes were semiautomated using the free version of CyberChair. We

received 152 submissions, the largest number ever. Each paper was assigned at least three, most four, and in a few cases seven. We committee members for review. All of the papers were reviewed in a 1-month period, during which the program chairs regularly monitored the progress of the review process. When reviewers claimed inadequate expertise, additional reviewers were solicited. In the end, we received a total of 594 reviews (3.9 per paper) from committee members as well as 248 coreviewers whose names are acknowledged in the proceedings. We

would like to thank all of them for their time and effort in providing us with such timely and high-quality reviews, some of them on extremely short notice.
