Everyone stumbles through life: some, more than others. Morgan Stark has been struggling from a young age. On her eighth birthday, she received many gifts, including one she believes is a curse—a rare sleepwalking disorder, doctors could only define as Episodic Violent Somnambulism. She and her parents have struggled ever since to understand what causes her condition, all to no avail. Now,

at 19 years old, Morgan is finally leaving the nest, as she embarks on her freshman year at Brixton University with her best friend, Chelsea, at her side. Morgan fears that leaving her home may not have been the best choice, but it's a choice she'll have to endure in the coming months. She hopes that as an adult, her sleepwalking disorder will cease, so she can finally stop having the nightmarish visions she encounters as a result. All she wants is to have a typical college experience and blend in, but the laws of fate have other plans for Morgan.

This is the second edition of Wil van der Aalst's seminal book on process mining, which now

discusses the field also in the broader context of data science and big data approaches. It includes several additions and updates, e.g. on inductive mining techniques, the notion of alignments, a considerably expanded section on software tools and a completely new chapter of process mining in the large. It is self-contained, while at the same

time covering the entire process-mining spectrum from process discovery to predictive analytics. After a general introduction to data science and process mining in Part I, Part II provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Next, Part III focuses on process discovery as the most important process

mining task, while Part IV moves beyond discovering the control flow of processes, highlighting conformance checking, and organizational and time perspectives. Part V offers a guide to successfully applying process mining in practice, including an introduction to the widely used open-source tool ProM and several commercial products. Lastly,

Part VI takes a step back, reflecting on the material presented and the key open challenges. Overall, this book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers. *Hands-On Dashboard Development with*
