Four years after the end of the Brood War, Emperor Arcturus Mengsk has rebuilt much of the Terran Dominion and consolidated a new military force despite an ever-present alien threat. Within this boiling cauldron of strife and subversion, a young woman known only as Nova shows the potential to become Mengsk's most lethal and promising "Ghost" operative. Utilizing a combination of pure physical aptitude, innate psychic power, and advanced technology, Nova can strike anywhere with the utmost stealth. Like a phantom in the shadows, she exists only as a myth to the enemies of the Terran Dominion. Yet Nova wasn't born a killer. She was once a privileged child of one of the Old Families of the Terran Confederacy, but her life changed forever when a rebel militia murdered her family. In her grief, Nova unleashed her devastating psychic powers, killing hundreds in a single, terrible moment. Now, on the run through the slums of Tarsonis, she is unable to trust anyone. Pursued by a special agent tasked with hunting down rogue telepaths, Nova must come to terms with both her burgeoning powers and her guilt -- before they consume her and destroy everything in her path....

Research on general video game playing aims at designing agents or content generators that can perform well in multiple video games, possibly without knowing the game in advance and with little to no specific domain knowledge. The general video game AI framework and competition propose a challenge in which researchers can test their favorite AI methods with a potentially infinite number of games created using the Video Game Description Language. The open-source framework has been

used since 2014 for running a challenge. Competitors around the globe submit their best approaches that aim to generalize well across games. Additionally, the framework has been used in AI modules by many higher-education institutions as assignments, or as proposed projects for final year (undergraduate and Master's) students and Ph.D. candidates. The present book, written by the developers and organizers of the framework, presents the most interesting highlights of the research performed by the authors during these years in this domain. It showcases work on methods to play the games, generators of content, and video game optimization. It also outlines potential further work in an area that offers multiple research directions for the future.

The world is being transformed physically and politically. Technology is the handmaiden of much of this change. But since the current sweep of global change is transforming the face of warfare, Special Operations Forces (SOF) must adapt to these circumstances. Fortunately, adaptation is in the SOF DNA. This book examines the changes affecting SOF and offers possible solutions to the complexities that are challenging many long-held assumptions. The chapters explore what has changed, what stays the same, and what it all means for U.S. SOF. The authors are a mix of leading experts in technology, business, policy, intelligence, and geopolitics, partnered with experienced special operators who either cowrote the chapters or reviewed them to ensure accuracy and relevance for SOF. Our goal is to provide insights into the changes around us and generate ideas about how SOF can adapt and succeed in the emerging operational environment.

Why do poor and minority students under-perform in school? Do computer games help or hinder learning? What can new research in psychology teach our educational policy-makers? In this major new book, Gee tackles the 'big ideas' about language, literacy and learning, putting forward an integrated theory that crosses disciplinary boundaries, and applying it to some of the very real problems that face educationalists today. Situated Language and Learning looks at the specialist academic varieties of language that are used in disciplines such as mathematics and the sciences. It argues that the language acquisition process needed to learn these forms of language is not given enough attention by schools, and that this places unfair demands on poor and minority students. The book compares this with learning as a process outside the classroom, applying this idea to computer and video games, and exploring the particular processes of learning which take place as a child interacts with others and technology to learn and play. In doing so, Gee examines what video games can teach us about how to improve learning in schools and engages with current debates on subjects such as 'communities of practice' and 'digital literacies'. Bringing together the latest research from a number of disciplines, Situated Language and Learning is a bold and controversial book by a leading figure in the field, and is essential reading for anyone interested in education and language.
