Establece de manera ordenada los pasos fundamentales del manejo de una crisis de urgencias, evitando posibles daños a los pacientes por acciones innecesarias u omisión de acciones relevantes. El contenido se distribuye en forma de protocolos concisos y claros, redactados de forma simple que permiten al profesional, de una manera rápida, localizar la información necesaria para superar las crisis de urgencias más comunes que puede padecer un paciente en nuestros servicios. Se trata de una herramienta eminentemente práctica, que favorece la operatividad de éste aplicado a situaciones críticas reales. Consta de protocolos de eventos críticos que aportan listas de

acciones y tratamientos a realizar cuando conocemos el diagnóstico y listas de verificación que tratan de prevenir crisis y solucionar problemas antes de que se desarrollen. Este manual es de gran utilidad en todos los Servicios de Urgencias, tanto extrahospitalarios como hospitalarios, en traslados de pacientes críticos, así como en unidades de observación, hospitalización y cuidados intermedios. El Manual de crisis de urgencias y emergencias tiene como objetivo principal servir de «ayuda cognitiva» inmediata a los profesionales que tienen que enfrentarse a situaciones de crisis en los servicios de urgencias, como un recurso complementario al conocimiento y la experiencia del médico, no como una solución integral. Se establece establecer, de manera ordenada, los pasos fundamentales del manejo de una crisis de urgencias, evitando posibles daños a los pacientes por acciones innecesarias u omisión de acciones relevantes.

From principles of oxygen delivery and patient assessment, through rapid sequence induction of anaesthesia and tracheal intubation, to the difficult and failed emergency airway, this book from an expert team of clinicians guides the reader through every aspect of emergency airway management. Retaining the concise, accessible format of the first edition, it includes a new section on human factors and improving teamwork and performance, an expanded

special circumstances section, and a summary of the 4th National Audit Project of the Royal College of Anaesthetists and Difficult Airway Society and its implications for practice. Updated guidelines, new technologies such as videolaryngoscopy, and recent evidence have all been incorporated into the chapter content, ensuring that the book reflects best current practice. This thoroughly updated new edition remains an essential resource for navigating a highly challenging clinical scenario and will be of value to emergency medicine, intensive care, anaesthesia and acute medicine clinicians.

The second edition of Paediatric Surgery has been designed to be highly relevant to the practice of clinical paediatric surgery. With this in mind, topics are presented in a clear and easily digestible format, with the most important learning points in each area clearly identified. The principles of the basic sciences, and how these relate to competent clinical practice, are covered in each clinical chapter, and are an important part of the Intercollegiate Board examination and other higher examinations in paediatric surgery in Europe and Australasia. While many of the topics from

the previous edition have been retained and updated as appropriate, there are a number of important additions. The important and developing field of minimally invasive surgery has been given more prominence. Oncology has been expanded to include more detail on solid tumours as well as more on central venous access and the surgical assessment of the acutely unwell child undergoing chemotherapy. Thoracic surgery has been expanded to include the management of empyema and the open and endoscopic approach to resection and biopsy. Finally, important 'generic' issues such as communication skills, the critical analysis of journal articles and evidence-based medicine have all been introduced. The second edition of Paediatric Surgery will be an invaluable resource for all trainee paediatric surgeons, providing a summary of practical, evidence-based advice for the candidate for the Intercollegiate Board Speciality Examination in Paediatric Surgery (FRCS Paeds), or other equivalent examination, without overwhelming and unnecessary detail. Mechanical Ventilation provides students and clinicians concerned with the care of patients requiring mechanical ventilatory support a comprehensive guide to the evaluation of the critically ill patient, assessment of respiratory failure, indications for mechanical ventilation, initiation of mechanical ventilatory support, patient stabilization, monitoring and ventilator discontinuance. The text begins with an introduction to critical respiratory care followed by a review of respiratory failure to include assessment of oxygenation, ventilation and acid-base status. A chapter is provided which reviews principles of mechanical ventilation and commonly used ventilators and related equipment. Indications for mechanical ventilation are next discussed to include invasive and non-invasive ventilation. Ventilator commitment is then described to include establishment of the airway, choice of ventilator, mode of ventilation, and initial ventilator settings. Patient stabilization is then discussed.
