Prehistoric rock art is the markings - paintings, engravings, or pecked images - left on rocks or cave walls by ancient peoples. In this book, Paul G. Bahn provides a richly illustrated overview of prehistoric rock art and cave art from around the world. Summarizing the recent advances in our understanding of this extraordinary visual record, he discusses new discoveries, new approaches to recording and interpretation, and current problems in conservation. Bahn focuses in particular on current issues in the interpretation of rock art, notably the "shamanic" interpretation that has been influential in recent years and that he refutes. This book is based on the Rhind Lectures that the author delivered for the Society of Antiquaries of Scotland in 2006.

Process Plant Layout, Second Edition, explains the methodologies used by professional designers to layout process equipment and pipework, plots, plants, sites, and their corresponding environmental features in a safe, economical way. It is supported with tables of separation distances, rules of thumb, and codes of practice and standards. The book includes more than seventy-five case studies on what can go wrong when layout is not properly considered. Sean Moran has thoroughly rewritten and re-illustrated this book to reflect advances in technology and best practices, for example, changes in how designers balance layout density with cost, operability, and safety considerations. The content covers the 'why' underlying process design company guidelines, providing a firm foundation for career growth for process design engineers. It is ideal for process

plant designers in contracting, consultancy, and for operating companies at all stages of their careers, and is also of importance for operations and maintenance staff involved with a new build, guiding them through plot plan reviews. Based on interviews with over 200 professional process plant designers Explains multiple plant layout methodologies used by professional process engineers, piping engineers, and process architects Includes advice on how to choose and use the latest CAD tools for plant layout Ensures that all methodologies integrate to comply with worldwide risk management legislation

'Therefore this terror and darkness of the mind Not by the sun's rays, nor the bright shafts of day, Must be dispersed, as is most necessary, But by the face of nature and her laws.' Lucretius' poem On the Nature of the Universe combines a scientific and philosophical treatise with some of the greatest poetry ever written. With intense moral fervour Lucretius demonstrates to humanity that in death there is nothing to fear since the soul is mortal, and the world and everything in it is governed not by the gods, but by the mechanical laws of nature. By believing this, men can live in peace of mind and happiness. Lucretius bases his argument on the atomic theory expounded by the Greek philosopher Epicurus. His poem explores sensation, sex, cosmology, meteorology, and geology through acute observation of the beauties of the natural world and with moving sympathy for man's place in it. Sir Ronald Melville's accessible and accurate verse translation is complemented by an introduction and notes

situating Lucretius' scientific theories within the thought of 1st century BCE Rome and discussing the Epicurean philosophy that was his inspiration and why the issues Lucretius' poem raises about the scientific and poetical views of the world continue to be important. Facsimile Products Financial Times/Prentice Hall This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Metal vapour ion lasers are a mature class of gas laser for which a number of applications has developed in recent years. This is the first book to appear in the English language on this topic, and concentrates on the physical processes which occur in the laser, in particular the kinetic processes which are responsible for the pumping of excited ion levels, and the production of population inversion. The most important types of electrical discharges used in this class of laser are discussed in detail, and all the major types of metal vapour ion laser are examined. A highly useful appendix tabulates all the known transitions used in metal vapour ion lasers. Metal Vapour Ion Lasers: Kinetic Processes and Gas Discharges provides a much needed review of this important field. It identifies current problem areas, and points to future research directions. It is an invaluable source for all those, both in industry and academia, working on the development or applications of metal vapour ion lasers, and for all those involved in gas laser research. It will also be of great interest to all those interested in the physics of gas discharges. The authors and translators have been involved with some of the key advances in the field over recent years.

Afrikan life into the coming millennia is imperiled by White and Asian power. True power must nest in the ownership of the real estate wherever Afrikan people dwell. Economic destiny determines biological destiny. 'Blueprint for Black Power' details a master plan for the power revolution necessary for Black survival in the 21st century. White treatment of Afrikan Americans, despite a myriad of theories explaining White behavior, ultimately rests on the fact that they can. They possess the power to do so. Such a power differential must be neutralized if Blacks are to prosper in the 21st century ... Aptly titled, 'Blueprint for Black Power' stops not at

critique but prescribes radical, practical theories, frameworks and approaches for true power. It gives a biting look into Black potentiality. (Back cover).
