While tensors and matrices provide the mathematical framework for understanding anisotropy, on which the physical and chemical properties of crystals and textured materials often depend, atomistic arguments are also needed to qualify the property coefficients in various directions. The atomistic arguments are partly based on symmetry and partly on the basic physics and chemistry of materials.

This is how children change...and then change the world. When Rosie and Penn and their four boys welcome the newest member of their family, no one is surprised it's another baby boy.
