Grids. Very often when drawing diagrams we will want to draw a grid. To do this we use the `\draw` command followed by some additional arguments. For example, we specify the grid step size using `step=` and a length. We've also specified the colour gray and told it to make the lines very thin. After these arguments we enter the co-ordinates of the bottom-left corner, followed by the keyword `grid ...`

For more details on how the thickness for edge lines grow, refer to the width notes of the `pygame.draw.line()` draw a straight line function. Returns: a rect bounding the changed pixels, if nothing is drawn the bounding rect's position will be the position of the first point in the points parameter (float values will be truncated) and its width and height will be 0 Area of polygons, including in a grid

Before we can start drawing, we need to talk about the canvas grid or coordinate space. Our HTML skeleton from the previous page had a canvas element 150 pixels wide and 150 pixels high. To the right, you see this canvas with the default grid overlaid. Normally 1 unit in the grid corresponds to 1 pixel on the canvas. The origin of this grid is positioned in the top left corner at coordinate ...
