CMP and polishing are the most precise processes used to  
finish the surfaces of mechanical and electronic or  
semiconductor components. Advances in CMP/Polishing  
Technologies for Manufacture of Electronic Devices presents  
the latest developments and technological innovations in the  
field - making cutting-edge R&D accessible to the wider  
engineering community. Most of the applications of these  
processes are kept as confidential as possible (proprietary  
information), and specific details are not seen in professional  
or technical journals and magazines. This book makes these  
processes and applications accessible to a wider industrial and  
academic audience. Building on the fundamentals of tribology -  
the science of friction, wear and lubrication - the authors  
explore the practical applications of CMP and polishing across  
various market sectors. Due to the high pace of development  
of the electronics and semiconductors industry, many of the  
presented processes and applications come from these  
industries. Demystifies scientific developments and  
technological innovations, opening them up for new  
applications and process improvements in the semiconductor  
industry and other areas of precision engineering Explores  
stock removal mechanisms in CMP and polishing, and the  
challenges involved in predicting the outcomes of abrasive  
processes in high-precision environments The authors bring  
together the latest innovations and research from the USA and  
Japan

and radiation delivery in an effort to  
optimize safety and clinical outcomes.  
Organized into two parts, the book discusses  
physics and radiobiology principles of  
brachytherapy as well as clinical applications  
of image-guided brachytherapy for various  
disease sites (central nervous system, eye,  
head and neck, breast, lung, gastrointestinal,  
genitourinary, gynecologic, sarcoma, and  
skin). It also describes the incorporation of  
imaging techniques such as CT, MRI, and  
ultrasound into brachytherapy procedures and  
planning. Featuring procedural and anesthesia  
care, extensive images, contouring examples,  
treatment planning techniques, and dosimetry  
for the comprehensive treatment for each  
disease site, Handbook of Image-Guided  
Brachytherapy is a valuable resource for

The industrial hygienist is actively involved with the engineering community, particularly where the subject of industrial ventilation is concerned. While engineers concentrate on methods and techniques necessary to ensure maximum efficiency of a given system, the industrial hygienist concentrates on human health. Ventilation is one of the most widely used methods of controlling environmental eontaminates, and for this reason, industrial hygienists must have specific knowledge of the design of equipment and the principles which it operates. This informative text, written in easily understood language, will allow those without a mechanical engineering background to understand air calculation and ventilation problems. Industrial Hygiene Ventilation provides the industrial hygienist with a handy reference containing the equations, constants, conversions, and formulae that they will encounter in their day to day duties.

This manual provides general information and insight into the development of a comprehensive water treatment residuals management plan for potable water treatment facilities. Readers gain an understanding of how to characterize the form, quantity, and quality of the residuals; determine the appropriate regulatory requirements; identify feasible disposal options; select appropriate residuals processing/treatment technologies; and develop a residuals management strategy that meets both the economic and noneconomic goals established for a water treatment facility. Addressed primarily are those residuals produced by coagulation/filtration plants, precipitative softening plants, membrane separation, ion exchange (IX), and granular activated carbon (GAC) absorption. In addition, available treatment technologies for gaseous residuals including stripping, odor control, gaseous chemical leak treatment, and

ozonation are described.

**NATIONAL BESTSELLER** • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. "A brilliant and thoroughly modern guide to learning new languages."—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Guitar Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn't learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

The book deals with the fundamentals, theoretical bases, and design methodologies of conventional internal combustion engine (ICE) vehicles, electric vehicles (EVs), hybrid electric vehicles (HEVs), and fuel cell vehicles (FCVs). The design methodology is described in mathematical terms, step-by-step, and the topics are approached from the overall drive train system, not just individual components. Furthermore, in explaining the design methodology of each drive train, design examples are presented with simulation results.
