As a field, education has largely failed to learn from experience. Time after time, promising education reforms fall short of their goals and are abandoned as other promising ideas take their place. In *Learning to Improve*, the authors argue for a new approach. Rather than "implementing fast and learning slow," they believe educators should adopt a more rigorous approach to improvement that allows the field to "learn

fast to implement well." Using ideas borrowed from improvement science, the authors show how a process of disciplined inquiry can be combined with the use of networks to identify, adapt, and successfully scale up promising interventions in education. Organized around six core principles, the book shows how "networked improvement communities" can bring together researchers and practitioners to accelerate learning in key areas of education. Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers. *Learning to Improve* offers a new paradigm for research and development in education that promises to be a powerful driver of improvement for the nation's schools and colleges.

Patient safety and quality are an ever-increasing concern to consumers, payers, providers, organizations, and governments. However, high reliability methods and science that can provide efficient and effective care have still not been totally implemented into our healthcare culture. Nurses, representing the majority of healthcare workers, are on the front line of the delivery and provision of safe and effective care and are ideally situated to drive the mission to achieve high reliability in healthcare. High Reliability Organizations: A Healthcare Handbook for Patient Safety & Quality presents practical examples of HRO principles in order to establish a system that detects and prevents errors from happening even in the most difficult, high risk conditions. Authors Cynthia Oster and Jane Braaten provide healthcare professionals with tools and best practices that will improve and enhance patient safety and quality outcomes. This book provides: An overview of HRO science as an organizing framework for quality and patient safety, practical applications of HRO science, focusing on quality and patient safety, knowledge and tools that can be applied to current quality and safety practices and real-world examples of HRO principles employed in a variety of patient care areas.

Highway Safety Act of 1973, Hearings Before the Subcommittee on Transportation, 93-1, on S. 893; a Bill to Authorize Appropriations for Certain Highway Safety Projects, to Extend and Improve the Federal Highway Safety Program, and for Other Purposes, March 13, 14, 1973 Elsevier Health Sciences From a public health perspective, motor vehicle crashes are among the most serious problems facing teenagers. Even after more than six months of being licensed to drive alone, teens are two to three times more likely to be in a fatal crash than are the more experienced drivers. Crash rates are significantly higher for male drivers, and young people in the United States are at greater risk of dying or being injured in an automobile

than their peers around the world. In fact, in 2003 motor vehicle crashes was the leading cause of death for youth ages 16-20 in the United States. Understanding how and why teen motor vehicle crashes happen is key to developing countermeasures to reduce their number. Applying this understanding to the development of prevention strategies holds significant promise for improving safety but many of these efforts are thwarted by a lack of evidence as to which prevention strategies are most effective. Preventing Teen Motor Crashes presents data from a multidisciplinary group that shared information on emerging technology for studying, monitoring, and controlling driving behavior. The book provides an overview of the factual information that was presented, as well as the insights that emerged about the role researchers can play in reducing and preventing teen motor crashes.
