Armada Ballantine Books

From the author of Ready Player One, a rollicking alien invasion thriller that embraces and subverts science-fiction conventions as only Ernest Cline could. Zack Lightman has never much cared for reality. He vastly prefers the countless science-fiction movies, books, and videogames he's spent his life consuming. And too often, he catches himself wishing that some fantastic, impossible,

world-altering event could arrive to whisk him off on a grand spacefaring adventure. So when he sees the flying saucer, he's sure his years of escapism have finally tipped over into madness. Especially because the alien ship he's staring at is straight out of his favorite videogame, a flight simulator called Armada--in which gamers just happen to be protecting Earth from alien invaders. As impossible as it seems, what Zack's seeing is all too real. And it's just the first in a blur of revelations that will force him to question everything he thought he knew about Earth's history, its future, even his own life--and to play the hero for real, with humanity's life in the balance. But even through the terror and exhilaration, he can't help thinking: Doesn't something about this scenario feel a little bit like...well...fiction? At once reinventing and paying homage to science-fiction classics as only Ernest Cline can, Armada is a rollicking, surprising thriller, a coming-of-age

adventure, and an alien invasion tale like nothing you've ever read before.

But, it's not us being brats. Two deeply inconvenient psychological phenomena conspire against our satisfaction. We have negatively-biased brains, which zoom like doom-drones in on what's wrong with our day, rather than what's right. (Back in the mists of time, this negative bias saved our skins, but now it just makes us anxious). Also, something called the 'hedonic treadmill' means we eternally quest for better, faster, more, like someone stuck

on a dystopian, never-ending treadmill. Thankfully, there are scientifically-proven ways in which we can train our brains to be more positive-seeking. And to take a rest from this tireless pursuit. Whew. Catherine Gray knits together illuminating science and hilarious storytelling, unveiling captivating research showing that big bucks don't mean big happiness, extraordinary experiences have a 'comedown' and budget weddings predict a lower chance of divorce. She reminds us what an average body actually is, reveals that exercising for weight loss means we do less exercise, and explores the modern tendency to not just try to keep up with the Murphys, but keep up with the Mega-Murphies (see: the social media elite). Beyond Freedom and Dignity Henry Holt and Company

NATIONAL BESTSELLER • "A devastating exposé of colleges and local law enforcement.... A substantive deep dive into the morass of campus sex crimes, where the victim is too often treated like the accused."

—Entertainment Weekly Missoula, Montana, is a typical college town, home to a highly regarded state university whose beloved football team inspires a passionately loyal fan base. Between January 2008 and May 2012, hundreds of students reported sexual assaults to the local police. Few of the cases were properly handled by either the university or local authorities. In this, Missoula is also typical. In these pages, acclaimed journalist Jon Krakauer investigates a spate of campus rapes that occurred in Missoula over a four-year period. Taking the town as a case study for a crime that is sadly prevalent throughout the nation, Krakauer documents the experiences of five victims: their fear and self-doubt in the aftermath; the skepticism directed at them by police, prosecutors, and

the public; their bravery in pushing forward and what it cost them. These stories cut through abstract ideological debate about acquaintance rape to demonstrate that it does not happen because women are sending mixed signals or seeking attention. They are victims of a terrible crime, deserving of fairness from our justice system. Rigorously researched, rendered in incisive prose, Missoula stands as an essential call to action.

Through the vivid, true stories of five people who journeyed into and out of addiction, a renowned neuroscientist explains why the "disease model" of addiction is wrong and illuminates the path to recovery. The psychiatric establishment and rehab industry in the Western world have branded addiction a brain disease. But in *The Biology of Desire*, cognitive neuroscientist and former addict Marc Lewis makes a convincing case that addiction is not a disease, and shows why the disease model has become an obstacle to healing.

Lewis reveals addiction as an unintended consequence of the brain doing what it's supposed to do—seek pleasure and relief—in a world that's not cooperating. As a result, most treatment based on the disease model fails. Lewis shows how treatment can be retooled to achieve lasting recovery. This is enlightening and optimistic reading for anyone who has wrestled with addiction either personally or professionally.

With an introduction by the author of *Circe* and *The Song of Achilles*, Madeline Miller In *Lucky* Alice Sebold reveals how her life was irrevocably changed when, as an eighteen-year-old college freshman, she was raped and beaten inside a tunnel near her campus. In this same tunnel, a girl had been raped and dismembered. By comparison, Alice was told by police, she was lucky. Though

Alice 's friends and family try their best to offer understanding and support, in the end it is Alice 's formidable spirit which resonates most in these pages. In a narrative both painful and inspiring, Alice Sebold shines a light on the true experience of violent trauma. Sebold 's redemption turns out to be as hard-won as it is real.

Eighteen-year-old Kit is weird: big, strange, odd, socially disabled, on a spectrum that stretches from "highly gifted" at one end, to "nutter" at the other. At least Kit knows who his father is; he and Guy live together in a decaying country house on the unstable brink of a vast quarry. His mother's identity is another matter. Now, though, his father's dying, and old friends are gathering for one last time. "Uncle" Paul's a media lawyer now; Rob and Ali are upwardly mobile corporate bunnies; pretty, hopeful Pris is a single mother; Haze is still living up to his drug-inspired name twenty years on; and fierce, protective Hol is a gifted if acerbic critic. As young film students they lived at Willoughtree House with Guy, and they've all come back because they want something. Kit, too, has his own ulterior motives. Before his father dies he wants to know who his mother is, and what's on the mysterious tape they're all looking for. But most of all he wants to stop time and keep his father alive. Fast-paced, gripping and savagely funny, *The Quarry* is a virtuoso performance whose soaring riffs on the inexhaustible marvel of human perception and rage against the dying of the light will stand among Iain Banks' greatest work.

Theories on Drug Abuse Fair Winds Press

In this profound and profoundly controversial work, a landmark of 20th-century thought originally published in 1971, B. F. Skinner makes his definitive statement about humankind and society.

Insisting that the problems of the world today can be solved only by dealing much more effectively with human behavior, Skinner argues that our traditional concepts of freedom and dignity must be sharply revised. They have played an important historical role in our struggle

against many kinds of tyranny, he acknowledges, but they are now responsible for the futile defense of a presumed free and autonomous individual; they are perpetuating our use of punishment and blocking the development of more effective cultural practices. Basing his arguments on the massive results of the experimental analysis of behavior he pioneered, Skinner rejects traditional explanations of behavior in terms of states of mind, feelings, and other mental attributes in favor of explanations to be sought in the interaction between genetic endowment and personal history. He argues that instead of promoting freedom and dignity as personal attributes, we should direct our attention to the physical and social environments in which people live. It is the environment rather than humankind itself that must be changed if the traditional goals of the struggle for freedom and dignity are to be reached. Beyond Freedom and Dignity urges us to reexamine the ideals we have taken for granted and to consider the possibility of a radically behaviorist approach to human problems--one that has appeared to some incompatible with those ideals, but which envisions the building of a world in which humankind can attain its greatest possible achievements.

The Serpent and the Rainbow Oxford University Press

The bestselling author of *All the Shah's Men* and *The Brothers* tells the astonishing story of the man who oversaw the CIA's secret drug and mind-control experiments of the 1950s and '60s. The visionary chemist Sidney Gottlieb was the CIA's master magician and gentlehearted torturer—the agency's “poisoner in chief.” As head of the MK-

ULTRA mind control project, he directed brutal experiments at secret prisons on three continents. He made pills, powders, and potions that could kill or maim without a trace—including some intended for Fidel Castro and other foreign leaders. He paid prostitutes to lure clients to CIA-run bordellos, where they were secretly dosed with mind-altering drugs. His experiments spread LSD across the United States, making him a hidden godfather of the 1960s counterculture. For years he was the chief supplier of spy tools used by CIA officers around the world. Stephen Kinzer, author of groundbreaking books about U.S. clandestine operations, draws on new documentary research and original interviews to bring to life one of the most powerful unknown Americans of the twentieth century. Gottlieb's reckless experiments on "expendable" human subjects destroyed many lives, yet he considered himself deeply spiritual. He lived in a remote cabin without running water, meditated, and rose before dawn to milk his goats. During his twenty-two years at the CIA, Gottlieb worked in the deepest secrecy. Only since his death has it become possible to piece together his astonishing career at the intersection of extreme science and covert action. *Poisoner in Chief* reveals him as a clandestine conjurer on an epic scale.

Puberty in Crisis PublicAffairs

Adding a new dimension to the history of mentalities and the study of popular culture, Thomas Brennan reinterprets the culture of the laboring classes in old-regime Paris through the rituals of public drinking in neighborhood taverns. He challenges the conventional depiction of lower-class debauchery and offers a reassessment of popular sociability. Using the records of the Parisian police, he lets the common people describe their own behavior and beliefs. Their testimony places the tavern at the center of working men's social existence. Central to the study is the clash of elite and popular culture as it was articulated in the different attitudes to taverns. The elites saw in taverns the indiscipline and exuberance that they

condemned in popular culture. Popular testimony presented public drinking in very different terms. The elaborate rituals surrounding public drinking, its prevalence in popular sociability and recreation, all point to the importance of drink as a medium of social exchange rather than a drugged escape from misery, and to the tavern as a focal point for men's communities. Professor Brennan has elucidated the logic of both elite and popular systems of meaning and found new dignity and coherence in the culture and values of the populace. Originally published in 1988. This book explores humanity's thoughts and ideas about extraterrestrial life, paying close attention to the ways science and culture interact with one another to create a context of imagination and discovery related to life on other worlds. Despite the recent explosion in our knowledge of other planets and the seeming era of discovery in which we live, to date we have found no concrete evidence that we are not alone. Our thinking about life on other worlds has been and remains the product of a combination of scientific investigation and human imagination shaped by cultural values--particularly values of exploration and discovery connected to American society. The rapid growth in our awareness of other worlds makes this a crucial moment to think about and assess the influence of cultural values on the scientific search for extraterrestrial life. Here the author considers the junction of science and culture with a focus on two main themes: (1) the underlying assumptions, many of which are tacitly based upon cultural values common in American society, that have shaped the ways researchers in astrobiology and SETI have conceptualized the nature of their endeavor and represented ideas about the potential influence contact might have on human civilization, and (2) the empirical evidence we can access as a way of thinking about the social impact that contact

with alien intelligence might have for humanity.

The New York Times Bestseller What if everything you think you know about addiction is wrong? Johann Hari's journey into the heart of the war on drugs led him to ask this question--and to write the book that gave rise to his viral TED talk, viewed more than 62 million times, and inspired the feature film *The United States vs. Billie Holiday* and the documentary series *The Fix*. One of Johann Hari's earliest memories is of trying to wake up one of his relatives and not being able to. As he grew older, he realized he had addiction in his family. Confused, not knowing what to do, he set out and traveled over 30,000 miles over three years to discover what really causes addiction--and what really solves it. He uncovered a range of remarkable human stories--of how the war on drugs began with Billie Holiday, the great jazz singer, being stalked and killed by a racist policeman; of the scientist who discovered the surprising key to addiction; and of the countries that ended their own war on drugs--with extraordinary results. *Chasing the Scream* is the story of a life-changing journey that transformed the addiction debate internationally--and showed the world that the opposite of addiction is connection.

The brilliant 1969 Hugo Award-winning novel from John Brunner, *Stand on Zanzibar*, now included with a foreword by Bruce Sterling Norman Niblock House is a rising executive at General Technics, one of a few all-powerful corporations. His work is leading General Technics to the forefront of global domination, both in the marketplace and politically---it's about to take over a country in Africa. Donald Hogan is his roommate, a seemingly sheepish bookworm. But Hogan is a spy, and he's about to discover a breakthrough in genetic engineering that will change the world...and

kill him. These two men's lives weave through one of science fiction's most praised novels. Written in a way that echoes John Dos Passos' U.S.A. Trilogy, *Stand on Zanzibar* is a cross-section of a world overpopulated by the billions. Where society is squeezed into hive-living madness by god-like mega computers, mass-marketed psychedelic drugs, and mundane uses of genetic engineering. Though written in 1968, it speaks of now, and is frighteningly prescient and intensely powerful. — New York Times Book Review “ This vital memoir will change how we look at the opioid crisis and how the media talks about it. A deeply moving and emotional read, *STRUNG OUT* challenges our preconceived ideas of what addiction looks like. ” —Stephanie Land, New York Times bestselling author of *Maid* In this deeply personal and illuminating memoir about her fifteen-year struggle with heroin, Khar sheds profound light on the opioid crisis and gives a voice to the over two million people in America currently battling with this addiction. Growing up in LA, Erin Khar hid behind a picture-perfect childhood filled with excellent grades, a popular group of friends and horseback riding. After first experimenting with her grandmother ' s expired painkillers, Khar started using heroin when she was thirteen. The drug allowed her to escape from pressures to be perfect and suppress all the heavy feelings she couldn ' t understand. This fiercely honest memoir explores how heroin shaped every aspect of her life for the next fifteen years and details the various lies she told herself, and others, about her drug use. With enormous heart and wisdom, she shows how the shame and stigma surrounding addiction, which fuels denial and deceit, is so often what keeps addicts from getting help. There is no one path to recovery, and for Khar, it was in motherhood that she found the inner strength and self-forgiveness to quit heroin and fight for her life. *Strung Out* is a life-affirming story of resilience while also a gripping investigation into the
