The main topics discussed in this book are the formation of the macromolecular condensed state from isolated long chain macromolecules in dilute solution, the salient physical behavior of the polymeric amorphous state, the liquid crystalline state of rigid chain polymers, the crystallization process and the single chain condensed state, all based on experimental results. The role of intersegmental cohesion and the difference between the single chain condensed state and the interpenetrated multichain condensed state are emphasized. In addition, the book introduces and discusses some new physical concepts, such as dynamic contact concentration, the looped chain, cohesive entanglement, the GOLR state (the global chain is highly oriented while the segmental orientation is completely random) and solidification-induced band texture.

A variable game changer for those companies operating in hostile, corrosive marine environments, Corrosion Control for Offshore Structures provides critical corrosion control tips and techniques that will prolong structural life while saving millions in cost. In this book, Ramesh Singh explains the ABCs of prolonging structural life of platforms and pipelines while reducing cost and decreasing the risk of failure. Corrosion Control for Offshore Structures places major emphasis on the popular use of cathodic protection (CP) combined with high efficiency coating to prevent subsea corrosion. This reference begins with the fundamental science of corrosion and structures and then moves on to cover more advanced topics such as cathodic protection, coating as corrosion prevention using mill applied coatings, field applications, and the advantages and limitations of some common coating systems. In addition, the author provides expert insight on a number of NACE and DNV standards and recommended practices as well as ISO and Standard and Test Methods. Packed with tables, charts and case studies, Corrosion Control for Offshore Structures is a valuable guide to offshore corrosion control both in terms of its theory and application. Over the past four centuries botanists and gardeners in the British Isles have gathered, maintained and propagated many varying species of plants. Their work has been documented in innumerable books and articles which are often difficult to trace. The Dictionary of British and Irish Botanists and Horticulturalists represents a time-saving reference source for those who wish to discover more about the lives and achievements of the horticulturalists listed. The dictionary's utility comes not only from indicating the major publications of the named authors, but also the location of their herbaria and manuscripts.; The previous 1977 edition of the Dictionary has for many years been a much used source of information for botanists, botanic artists and archivists. In this revised edition the scope has been expanded to include among its 13,000 entries flower painters in addition to botanical artists over 1400 entries and, for the first time, garden designers.; Finally the Dictionary should have international appeal since so many botanists and gardeners worked on collective plants overseas, in particular in North America and the British Commonwealth.; Each entry gives, wherever possible, details of dates and places of birth and death, educational qualifications, professional posts, honours and awards, publications, location of plant collections, manuscripts, drawings and portraits. Its main function, however, is to provide further biographical references to books and periodicals. Comprehensive classified indices facilitate access by professions and activities, countries, and plant interests.

This book is about the development and effect of operations, often on the abdomen, done for psychiatric symptoms and about one of the period's most distinguished surgeons, Sir William Arbuthnot Lane. He was internationally famous in three fields of surgery (facial, mastoid and abdominal), then became deeply involved in removing colons — thought to be the 'sink' of the body and the source of dangerous infection.
