aspirations of writing the great American trash novel. She's the spoiled, sharp-tongued boss's daughter, always looking for a creative way to spice up her boring life. Normally, these two would never meet, but a higher power has different plans for both of them. The major motion picture from 20th Century Fox starring Ewan McGregor, Cameron Diaz and Holly Hunter hits the box office in October. Decision Equity Desserts LaBelle In Daughter of the Air, Rob Simbeck paints a vivid portrait of Army pilot Cornelia Fort--a passionate, brave, intelligent, and charming woman--and provides insight into the political and social atmosphere of her era. He cites Fort's letters and diaries, various historical documents, and interviews of people who knew her personally and also flew with her. Cornelia Fort's (1919-1943) barrier-breaking life included membership

in the first trained women's flight squadron, the WAFS. In a remarkable coincidence of fate, she was flying over Oahu on the morning of December 7, 1941, and was one of the few to witness the bombing of Pearl Harbor from the air. Her brief career was marked by the prejudices of the era toward women pilots. Raised on her parent's Nashville estate and educated at a prestigious finishing school, Fort cast off her role as a member of Southern aristocracy to become a pilot. She persevered in her courageous career despite rampant prejudice toward women, noting "because there were and are so many disbelievers in women pilots, especially in their place in the Army, all of us realized what a spot we were in. We had to deliver the goods or else." Tragically, it was a male pilot's practical joke that clipped her wing and sent Fort into a fatal spin. This biography is a must read for historians, military specialists, or those interested in the role of women in the military.

In this book, we introduce Decision Equity as a breakthrough, overarching metric that can help free marketing managers from their existing mental models, and provide avenues to efficiently convert the vast amounts of data at their disposal into powerful information to make informed long-term and short-term decisions about products, customers, markets, and overall business health. There are four key objectives that we wish to achieve through this book. First, we wish to introduce the underpinnings of a new flow-based measurement and management process that can promote truly unshackled thinking both within the marketing function as well as at its interface with other functional areas. Second, we want to demonstrate how firms can win by learning to conceptualize and discover the linkages between marketing and related non-marketing actions and their ultimate marketplace and financial consequences. Third, we aim to provide guidance for how marketing managers and CMOs can significantly improve the outcomes of their decisions by following a verification-based linkage discovery process to connect marketing actions to profits. And fourth, we wish to provide evidence for the efficacy of verification-based thinking centered on the principles of Decision Equity from successful marketing interventions and

implementations in well-known organizations.

A stranger arrives at an address in a nice part of town. He is invited inside by the lady who lives there. Soon she and her husband are dead. A woman lured to the house on a pretext is also murdered: the level of violence inflicted on the

victims is extreme. Detective Inspector Mark Hobson is tasked with investigating this triple murder. To begin with he can find nothing to connect the third victim to the other two, but then he discovers that she and the male householder were both members of a jury which ten years earlier convicted a celebrity public figure of numerous child sex offences: Hobson himself was an investigating officer in that case. Other particularly gruesome murders follow, and all of the victims turn out to have had links with that trial. Hobson's wife and daughter then become pawns in a deadly game of cat and mouse, and Hobson is forced to consider doing something truly appalling in an effort to save their lives.

Medical responsibility lawsuits have become a fact of life in every physician's medical practice. However, there is evidence that physicians are increasingly practising defensive medicine, ordering more tests than may be necessary

and avoiding patients with complicated conditions. The modern practice of medicine is increasingly complicated by factors beyond the traditional realm of patient care, including novel technologies, loss of physician autonomy, and economic pressures. A continuing and significant issue affecting physicians and the healthcare system is malpractice. In the latter half of the 20th century, there was a major change in the attitude of the public towards the medical profession. People were made aware of the huge advances in medical technology, because health problems increasingly tended to attract media interest and wide publicity. Medicine is a victim of its own success in this respect, and people are now led to expect the latest techniques and perfect outcomes on all occasions. This burst of technology and hyper-specialization in many fields of medicine means that each malpractice claim is transformed into a scientific challenge, requiring specific preparation in analysis and judgment of the clinical case in question. The role of legal medicine becomes more and more peculiar in this judicial setting, often giving rise to erroneous interpretations and

hasty scientific verdicts, but guidelines on the methodology of ascertainment and criteria of evaluation are lacking all over the world. The aim of this volume is to clarify the steps required for sequential in-depth analysis of events and consequences of medical actions, in order to verify whether, in the presence of damage, errors or non-observance of rules of conduct by health personnel exist, and which causal values and links of their hypothetical misconduct are involved.?
