First published in 1964, Psychology and Social Problems looks at a changing society and research into problems of the time. Many of the themes in the book, such as delinquency, mental health and racial conflict, are still familiar and current topics of discussion today. Social scientists had carried out extensive research into problems of urgent public concern, yet their findings were not widely known or understood and they had often been diffident in advocating policies based on their

conclusions. Michael Argyle discussed the recent psychological and social research bearing on the origins of aggression, delinquency, mental disorder, racial and international prejudice, and industrial discontent; he went on to consider the implications of these studies for prevention and control and for the guidance of social change. This sophisticated and well-documented critique is presented with such lucidity and verve that it will appeal equally to laymen and to students and professional workers and can now be enjoyed in its historical context.

'Lord Sugar is a self-made man and one of Britain's finest business brains. His story so far is inspirational to the end' The Sun 'Sugar is unusual among celebrity memoirists in that he's a clever man who has done a lot with his life, and the tale of his rise from nothing, and nowhere is genuinely revealing' Private Eye From a Hackney council estate to the House of Lords, this is the extraordinary story of one of our greatest entrepreneurs. Alan Sugar was born in 1947 and brought up on a council estate in Clapton, in Hackney. As a kid he watched his dad struggle to support the family, never knowing from one week

to the next if he'd have a job. It had a huge impact on him, fuelling a drive to succeed that was to earn him a sizeable personal fortune. Now he describes his amazing journey, from schoolboy enterprises like making and selling his own ginger beer to setting up his own company at nineteen; from Amstrad's groundbreaking ventures in hi-fi and computers, which made him the darling of the stock exchange, to the dark days when he nearly lost it all; from his pioneering deal with Rupert Murdoch to his boardroom battles at Tottenham Hotspur FC. In this compelling autobiography, he takes us into the world of The Apprentice, and describes his appointment as advisor to the government and elevation to the peerage. Like the man himself, What You See Is What You Get is forthright, funny and sometimes controversial. 'I'm addicted to autobiographies and What You See Is What You Get is one of the best I've read. Love him or loathe him, Baron Sugar of Clapton is the walking, snarling embodiment of all the values he espouses on The Apprentice' Piers Morgan

The field of digital forensics is becoming increasingly important for law enforcement, network security, and information assurance. It is a multidisciplinary area that encompasses a number of fields,

including law, computer science, finance, networking, data mining, and criminal justice. The 24 papers in this volume cover a variety of topics ranging from tactics of cyber crime investigations to digital forensic education, network forensics, and the use of formal methods in digital investigations. There is a large section addressing forensics of mobile digital devices.

This volume is aimed at those who are concerned about Chinese medicine - how it works, what its current state is and, most important, how to make full use of it. The audience therefore includes clinicians who want to serve their patients better and patients who are eager to supplement their own conventional treatment. The authors of the book belong to three different fields, modern medicine, Chinese medicine and pharmacology. They provide information from their areas of expertise and concern, attempting to make it comprehensive for users. The approach is macroscopic and philosophical; readers convinced of the philosophy are to seek specific assistance.

This book enables the reader to learn the fundamental and applied aspects of practical cryostat design by examining previous design choices and resulting cryostat performance. Through a series of extended case studies the book presents an overview of existing cryostat design covering a wide range of cryostat types and applications, including the magnet cryostats that comprise the majority of the Large Hadron Collider at CERN, space-borne cryostats containing sensors operating below 1 K, and large cryogenic liquid storage vessels. It starts with an introductory section on the principles of cryostat design including practical data and equations. This section is followed by a series of case studies on existing cryostats, describing the specific requirements of the cryostat, the challenges involved and the design choices

made along with the resulting performance of the cryostat. The cryostat examples used in the studies are chosen to cover a broad range of cryostat applications and the authors of each case are leading experts in the field, most of whom participated in the design of the cryostats being described. The concluding chapter offers an overview of lessons learned and summarises some key hints and tips for practical cryostat design. The book will help the reader to expand their knowledge of many disciplines required for good cryostat design, including the cryogenic properties of materials, heat transfer and thermal insulation, instrumentation, safety, structures and seals.

This manual provides information, foundation exploration and testing procedures, load test methods, analysis techniques, allowable criteria, design procedures, and construction consideration for the selection, design, and installation of pile foundations. The guidance is based on the present state of the technology for pile-soil-structure-foundation interaction behavior. This manual provides design guidance intended specifically for the geotechnical and structural engineer but also provides essential information for others interested in pile foundations such as the construction engineer in understanding construction techniques related to pile behavior during installation. Since the understanding of the physical causes of pile foundation behavior is actively expanding by better definition through ongoing research, prototype, model pile, and pile group testing and development of more refined analytical models, this manual is intended to provide examples and procedures of what has been proven successful. This is not the last nor final word on the state of the art for this technology. We expect, as further practical design and installation procedures are developed from the expansion of this technology, that these updates will be issued as changes to this manual.

This little book is written in a simple, easily understandable style. The animals do the talking and tell their individual stories. Each and every one comes from the street. They speak for the thousands that didn't find a safe home-that died on the street as road-kill, or simply starved to death for lack of food and water-for which we, the humans, shall be held accountable. This book hopes to give comfort and courage to the disabled and to anyone hurting or grieving in body and spirit. It hopes to alleviate the loss-when it invariably comes-and reminds one in all, what life is all about. Till we meet again. Auf ein Wiedersehen. A viszont latasra."

If you are going to use Social Media, especially as a content creator, you are inevitably going to have to deal with haters, trolls and detractors. In dealing with them, it is important that you engage them from a position of power and as one who is in control of the frame of the interactions between you and them. These people can be annoying, frustrating and most of all angering. This is exactly what the troll wants. Trolls want to make you emotional so that you react to them, giving them control over you and your platform. Thus allowing them to take control of what you've built or use for their entertainment. If you quit, they win, and if you react to them, they win. When you understand this, you understand that all of their tools are meant to reach one of these two goals; which gives you the power to thwart them from the start. If you understand a person's intentions and desired outcomes, you can control all interactions between them. I have dealt with all of these emotions when dealing with the online legions of people, who seem to lack direction and purpose in their lives; and used it to fuel my passions and goals. Had I not faced the online mob of haters and trolls, I would not have written this brief treatise about them. This is what makes people, like you and I, different. We create and build and do not hate and attempt to destroy.

Re-Figuring Theology Routledge

Here is a rhetorical treatment of Karl Barth's early theology. Although scholars have long noted the rhetorical power of Barth's work, calling it volcanic and explosive, this book uses rhetoric to illuminate the peculiar nature of his prose. It displays a Barth whose prose is radically

unstable and inseparable from his theological arguments. The author connects Barth's early theology to the Expressionism of the Weimar Republic. He develops an original theory of figures of speech, relying on the philosophies of Paul Ricoeur and Hayden White, to delve more deeply into the particular configurations of Barth's writings.

Nietzsche's hyperbole and Kierkegaard's irony are examined as rhetorical precedents of Barth's style. The closing chapter surveys Barth's later, realistic theology and then suggests ways in which his earlier tropes, especially the figures of excess and self-negation, can serve to enable theology to speak today.

The interaction of high-power lasers with matter can generate Terahertz radiations that efficiently contribute to THz Time-Domain Spectroscopy and also would replace X-rays in medical and security applications. When a short intense laser pulse ionizes a gas, it may produce new frequencies even in VUV to XUV domain. The duration of XUV pulses can be confined down to the isolated attosecond pulse levels, required to study the electronic re-arrangement and ultrafast processes. Another important aspect of laser-matter interaction is the laser thermonuclear fusion control where accelerated particles also find an efficient use. This book provides comprehensive coverage of the most essential topics, including Electromagnetic waves and lasers THz radiation using semiconducting materials / nanostructures / gases / plasmas Surface plasmon resonance THz radiation detection Particle acceleration technologies X-ray lasers High harmonics and attosecond lasers Laser based techniques of thermonuclear fusion Controlled fusion devices including NIF and ITER The book comprises of 11 chapters and every chapter starts with a lucid

introduction to the main topic. Then sub-topics are sedulously discussed keeping in mind their basics, methodology, state-of-the-art and future perspective that will prove to be salutary for readers. High quality solved examples are appended to the chapters for their deep understanding and relevant applications. In view of the nature of the topics and their level of discussion, this book is expected to have pre-eminent potential for researchers along with postgraduate and undergraduate students all over the world.

The Advanced Study Institute on Strongly Coupled Plasmas was held on the campus of the Universite d'Orleans, Orleans-la-Source, France, from July 6th through July 23rd, 1977. 15 invited lecturers and 50 other participants attended the Institute. The present Volume contains the texts of most of the lectures and of some of the numerous seminars presented at the Institute. The topic of strongly coupled coulomb-systems has been an area of vigorous activities over the last few years. Such systems occur in a great variety of physical situations: stellar and planetary interiors, solid and liquid metals, semiconductors, laser compressed plasmas and gas discharges are some of the most important examples. All these systems have the common feature that for one or more of their constituent charged particle liquids the potential energy to kinetic energy ratio is not small, and therefore the application of the traditional plasma perturbation techniques is not feasible. Many ingenious theoretical schemes have been worked out in order to attack both the related equilibrium and nonequilibrium problems, and also various methods have been borrowed from areas where problems not

dissimilar to the ones arising in coulomb-systems had already been tackled. At the same time, computer simulations have led to a probably unparalleled accumulation of data on the behavior of an ensemble of classical charged particles. For the first time, the Institute assembled workers from various disciplines who had been involved with diverse aspects of the strongly coupled plasma problem.
