This book is based on a selection of presentations given at the very successful symposium "Multiphase Chemistry of Atmospheric Aerosols" held at the 2017 ACS Fall meeting and attended by a large number of researchers. This symposium provided an excellent opportunity to hear about multiple aspects of atmospheric multiphase chemistry from a diverse spectrum of presenters, including laboratory and field experimentalists and modelers. Similarly, by presenting the material in a single edited book, we hope to encourage cross-disciplinary thinking among these topics so that more scientists can imagine solutions to the challenges of understanding and mitigating the effects of atmospheric aerosols. The chapter authors begin with introductory material addressing scientists who may work in a broad range of disciplines, and then move to more specific details for the experts in the field. Therefore, this book should be an excellent resource for those just starting in the field of atmospheric chemistry and for those who want to initiate new research directions with a mix of basics and some of the newest advances.
