In March 1968, thousands of Chicano students walked out of their East Los Angeles high schools and middle schools to protest decades of inferior and discriminatory education in the so-called "Mexican Schools." During these historic walkouts, or "blowouts," the students were led by Sal Castro, a courageous and charismatic Mexican American teacher who encouraged the students to make their grievances public after school administrators and school board members failed to listen to them. The resulting blowouts sparked the beginning of the urban Chicano Movement of the late 1960s and early 1970s, the largest and most widespread civil rights protests by Mexican Americans in U.S. history. This fascinating testimonio, or oral history, transcribed and presented in Castro's voice by historian Mario T. Garcia, is a compelling, highly readable narrative of a young boy

growing up in Los Angeles who made history by his leadership in the blowouts and in his career as a dedicated and committed teacher. *Blowout!* fills a major void in the history of the civil rights and Chicano movements of the 1960s, particularly the struggle for educational justice.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
