After 20 years of marriage author Christopher Cudworth and his wife Linda faced a future changed by her onset of ovarian cancer at age 46. Early in their survivorship journey a former coach reached out to Chris with advice both practical and inspirational. "Your whole life has been a preparation for this." Meanwhile the women at the preschool where Linda worked rallied to support the family by forming The Girls Club, whose primary rule was simple. "We're here to help. Tell us everything that's going on." Through eight years of cancer survivorship the couple learned much about the value of character, caregiving and community. *The Right Kind of Pride* is a chronicle of that journey and how family, friends and faith made miracles happen along the way. The Prologue describes how the couple responded to news of cancer and formed both a practical and philosophical strategy to deal with the life-changing news. The book also features the blogs Chris and Linda distributed through an online caregiving website to a caregiving support group of more than 70 people. Each entry was written in real time and covers the real emotions of cancer survivorship from fear to faith, hope to humor. Through it all the couple strove to be a blessing to others as they were blessed, with testimony to the power of faith but also the attenuation required to make smart choices in health care situations and deal with the fact that life, and medicine itself, are not always perfect. These key philosophies emanated from the saying the couple adopted (or co-opted) as their own. "Normally the phrase 'It Is What It Is' means resignation," the author notes. "But to us it helped put cancer in its place. Linda did not choose the attitude of victimhood because our gratitude for all the help we received erased that worldview." Instead the couple enjoyed long periods of remission during 8 years of cancer survivorship while busy working, raising two children through high school and college and making time for gardening, fitness and immersion in the joys of life. The book also chronicles some of the sudden and disturbing challenges the couple faced as Chris met resistance from employers on caregiving and health insurance coverage. Yet time after time the attitude of faith and trust resolved these issues. *The Right Kind of Pride* focuses on the fact that humility and the willingness to show weakness and vulnerability are important facets of cancer survivorship. They present an honest take on the human condition while showing the will to do what's necessary to find peace, health and acceptance through all phases of cancer survivorship. The book carries the reader through the hope that led to miracles and the resolution of hospice and grief. The author shares his *Goofball's Guide to Grief*, documenting the seemingly random thoughts that come with loss and change. As author of a book titled *The Genesis Fix: A Repair Manual for Faith in the Modern Age*, Christopher Cudworth uses that background to relate the tangible relationship (and balance) between belief in God and the very real world of science, medicine and politics that

affects us all. *The Right Kind of Pride* is about making sense of cancer survivorship.

The current trend toward machine-scoring of student work, Ericsson and Haswell argue, has created an emerging issue with implications for higher education across the disciplines, but with particular importance for those in English departments and in administration. The academic community has been silent on the issue—some would say excluded from it—while the commercial entities who develop essay-scoring software have been very active. *Machine Scoring of Student Essays* is the first volume to seriously consider the educational mechanisms and consequences of this trend, and it offers important discussions from some of the leading scholars in writing assessment. Reading and evaluating student writing is a time-consuming process, yet it is a vital part of both student placement and coursework at post-secondary institutions. In recent years, commercial computer-evaluation programs have been developed to score student essays in both of these contexts. Two-year colleges have been especially drawn to these programs, but four-year institutions are moving to them as well, because of the cost-savings they promise.

Unfortunately, to a large extent, the programs have been written, and institutions are installing them, without attention to their instructional validity or adequacy. Since the education software companies are moving so rapidly into what they perceive as a promising new market, a wider discussion of machine-scoring is vital if scholars hope to influence development and/or implementation of the programs being created. What is needed, then, is a critical resource to help teachers and administrators evaluate programs they might be considering, and to more fully envision the instructional consequences of adopting them. And this is the resource that Ericsson and Haswell are providing here.
