Software Engineer responsibilities include gathering user requirements, defining system functionality and writing code in various languages, like Java, Ruby on Rails or .NET programming languages (e.g. C++ or JScript.NET.)

Software engineers are the creative minds behind computer programs. They may begin by asking how the customer plans to use the software. They must identify the core functionality that users need from software programs. software engineers must also determine user requirements that are unrelated to the functions of the software, such as the level of security and performance needs.
