Essentials of Children's Literature Houghton Mifflin Harcourt

Lobachevsky wrote Pangeometry in 1855, the year before his death. This memoir is a resume of his work on non-Euclidean geometry and its applications and can be considered his clearest account on the subject. It is also the conclusion of his life's work and the last attempt he made to acquire recognition. The treatise contains basic ideas of hyperbolic geometry, including the trigonometric formulae, the techniques of computation of arc length, of area and of volume, with concrete examples. It also deals with the applications of hyperbolic geometry to the computation of new definite integrals. The techniques are different from those found in most modern books on hyperbolic geometry since they do not use models. Besides its historical importance, Lobachevsky's Pangeometry is a beautiful work, written in a simple and condensed style. The material that it contains is still very alive, and reading this book will be most useful for researchers and for students in geometry and in the history of science. It can be used as a textbook, as a sourcebook, and as a repository of inspiration. The

present edition provides the first complete English translation of Pangeometry available in print. It contains facsimiles of both the Russian and the French original versions. The translation is accompanied by notes, followed by a biography of Lobachevsky and an extensive commentary. Fire Management Today Penguin A collection of quirky, fun facts. The Jedi Master's Quizbook Harper Collins

What is the difference between climate and weather? How does ice melting at the South Pole affect sea levels thousands of miles away? This book explains how climate change contributes to rising sea levels and hazards such as heat waves, droughts, and extra-powerful storms. Learn how scientists analyze these extreme events and predict how they might change in the future. Glaciers are melting. Summers are heating up. Sea levels are on the rise. Climate change is affecting every corner of our planet - and it's the subject of a lot of concern, activism, and debate. STEM meets current events in this new A True Book set that offers readers the chance to learn about the causes and effects of climate change, as well as how people around the world are reacting to it. Students will read about the history and scope of the problem, analyze the same kinds of evidence that scientists do, and come away with tools that will help them respond to this pressing global issue. This series covers Next Generation Science Standards core ideas including Weather and Climate, Human Impacts on Earth Systems, Conservation of Energy and Energy Transfer, and Biodiversity and Humans.

Discover how mathematical sequences abound in our natural world in this definitive exploration of the geography of the cosmos. You need not be a philosopher or a botanist, and certainly not a mathematician, to enjoy the bounty of the world around us. But is there some sort of order, a pattern, to the things that we see in the sky, on the ground, at the beach? In *A Beginner's Guide to Constructing the Universe*, Michael Schneider, an education writer and computer consultant, combines science, philosophy, art, and common sense to reaffirm what the ancients observed: that a consistent language of geometric design underpins every level of the universe, from atoms to galaxies, cucumbers to cathedrals. Schneider also discusses numerical and geometric symbolism through the ages, and concepts such as periodic renewal and resonance. This book is an education in the world and everything we can't see within it. Contains numerous b&w photos and illustrations.

What does mathematics have to do with
poetry? Seemingly, nothing. Mathematics
deals with abstractions while poetry with
emotions. And yet, the two share something
essential: Beauty. "Euclid alone has looked on
beauty bare," says the title of a poem by Edna
St. Vincent Millay. A winner of the CHOICE
Outstanding Academic Title 2015,
"Mathematics, Poetry and Beauty" tries to
solve the secret of the similarity between the
two domains. It tries to explain how a
mathematical argument and a poem can
move us in the same way. Mathematical and
poetic techniques are compared, with the aim
of showing how they evoke the same sense of
beauty. The reader may find that, as Bertrand
Russell said, "Mathematics, rightly viewed,
possesses not only truth, but supreme beauty
-- a beauty hold and austere, like that of
sculpture ... sublimely pure, and capable of a
stern perfection such as only the greatest art
can show."

Diane France loves bones. Why? Because they
talk to her. Every skeleton she meets whispers
secrets about the life-and death-of its owner.
Diane France can hear those secrets because she's
a forensic anthropologist, a bone detective. She
has the science skills and know-how to examine
bones for clues to a mystery: Who was this

person and how did he or she die? Bones tell
Diane about the life and times of famous people in
history, from a Russian royal family to American
outlaws and war heroes. They speak to her about
murders, mass disasters, and fatal accidents. One
day she's collecting skeletal evidence at a crime
scene. A phone call later she's jetting to the site of
a plane crash or other unexpected tragedy to
identify victims. Young readers will be captivated
by the thrilling real-life story of this small-town
girl full of curiosity and mischief who became a
world-famous bone detective.

"Whom to marry, and when will it happen—these
two questions define every woman's existence."

So begins Spinster, a revelatory and slyly erudite look
at the pleasures and possibilities of remaining single.

Using her own experiences as a starting point,
journalist and cultural critic Kate Bolick invites us
into her carefully considered, passionately lived life,
weaving together the past and present to examine
why she—along with over 100 million American
women, whose ranks keep growing—remains
unmarried. This unprecedented demographic shift,
Bolick explains, is the logical outcome of hundreds of
years of change that has neither been fully

understood, nor appreciated. Spinster introduces a cast of pioneering women from the last century whose genius, tenacity, and flair for drama have emboldened Bolick to fashion her life on her own terms: columnist Neith Boyce, essayist Maeve Brennan, social visionary Charlotte Perkins Gilman, poet Edna St. Vincent Millay, and novelist Edith Wharton. By animating their unconventional ideas and choices, Bolick shows us that contemporary debates about settling down, and having it all, are timeless—the crucible upon which all thoughtful women have tried for centuries to forge a good life. Intellectually substantial and deeply personal, Spinster is both an unreservedly inquisitive memoir and a broader cultural exploration that asks us to acknowledge the opportunities within ourselves to live authentically. Bolick offers us a way back into our own lives—a chance to see those splendid years when we were young and unencumbered, or middle-aged and finally left to our own devices, for what they really are: unbounded and our own to savor.
