The introduction to the POGIL is all that is appropriate to my students, as we will be teaching equilibrium without involving calculations of the equilibrium constant. The remainder of the POGIL activity is very math heavy. Throughout this lesson, students will be asking questions (SP1) about the reactions they observe.

The concentration on both sides of the membrane will eventually reach DYNAMIC EQUILIBRIUM. The concentration of solutes will be the same on both sides of the membrane as water continues to move back and forth. Diffusion is the movement of molecules across a membrane from an area of high concentration to an area of low concentration.
