How can professionals manage the boundary between personal involvement and professional detachment when faced constantly by people in distress? The authors explore a broad range of perspectives on this question, from philosophical enquiry to the dilemmas of everyday practice. They draw on a common experience of psychosocial nurse training at the Cassel Hospital - a therapeutic community based on psychodynamic ideas and experiential learning. Now, writing from a variety of different settings, they show how personal feelings can provide a key to understanding and containing the emotional needs of people in distress. They demonstrate the central role of shared reflection with colleagues for developing skills, practical theories and theory-based practice. This book is for all practitioners concerned with the provision of high quality psychosocial care to individuals, families, groups and organisations. It will be a valuable resource for students undertaking diploma and degree courses in nursing, health and social care, and for the providers of such courses. It will also be of interest to researchers and managers.

This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions.
