Make The E-Business Workplace Work For
You From the consultants at
PricewaterhouseCoopers and SAP come the
keys to understanding and taking advantage
of the most exciting development in the world
of business technology-the e-business
workplace. Written in language that is
accessible to all executives and managers, in
any company and industry-not just to
information technology professionals-the
authors explain how this user-oriented, people-

friendly technology can transform your
organization by empowering collaboration
among its employees and value network
partners. Here are answers to such critical
questions as: How can you use workplace
technology to move from integration to true
collaboration? What are the advantages of a
truly people-friendly technology? Does
workplace technology add value? How are
roles different from jobs, and how does the e-
business workplace use roles to help people
perform their jobs more effectively and
efficiently? What are the components of
workplace technology software, and how do
you choose a product best suited to your
organization? Can the e-business workplace
help your organization manage change?
Where does workplace technology fit within
the broader e-business context? Can the e-
business workplace help your organization
achieve its vision? In answering these
questions, the authors support their

conclusions with numerous real-world
examples that move the theory behind
workplace technology into practice. The E-
Business Workplace also provides insights
and knowledge found nowhere else, based on
the thousands of technology implementations
in which they and their organizations have
been integrally involved. Take this opportunity
to learn about a critically important technology
that may be the defining factor in determining
success and failure in an increasingly complex
Internet-enabled economy.

A top industry executive explains total software integration and how it holds the key to market leadership To achieve fast, agile, and diverse responsiveness to today's ever shifting business needs, executives need to successfully implement strategic decisions based more on reality rather than rhetoric. In Software Rules, Oracle senior executive Mark Barrenechea describes for business readers how, over the next few years, the total integration of software functions into "E-business suites," will radically transform the business landscape. An E-business suite is a set of applications, founded on a centralized database and integrated by desing, that optimizes the supply and demand chains together, enabling employees anywhere on the globe to access accurate and reliable business data that always reflects real information.

Using case studies from BellSouth, Xerox, EMC, HP, Oracle, and other leading companies, he describes how business suites work to help companies in all industry sectors to centralize change, dramatically improve customer service, slash production costs, streamline product introduction and upgrades, gather definitive business intelligence, transform marketing into electronic selling, and much more.

'E-business Implementation' is written as a complete guide to successful e-business delivery, from both a project management and a detailed technological perspective. E-business provides a powerful mechanism for organizations to increase productivity and lower costs. However, in order to utilise these considerable benefits, companies must ensure their e-business is implemented correctly and is appropriate to their market segment. 'E-business Implementation' provides a comprehensive guide to successful implementation and is divided into three parts: * Part one

begins with a project management structure designed to deliver successful e-business functionality within time and budget, while avoiding the high failure rates common to many technology projects. * Part two details key concepts, technologies, products, vendors, benefits, limitations, and high-level design architectures for e-business, in a phased and risk-managed approach. These include publishing through the Internet and Intranets, portals and content management systems, transacting using e-commerce, integrating internal enterprise applications, integrating with external partners and suppliers, and responding in real-time to changing levels of demand through dynamic e-business and web services. * Part three details a set of critical foundation technologies that must be implemented correctly for the e-business initiative to be successful. These technologies include e-business development languages such as Java, XML and .Net, hardware platforms and their operating systems, security and networking systems, the Internet Domain Name System, and Open

Source technologies.
